# 1) DCC Documentation

## E1000304

### aLIGO SEI Testing and Commissioning Documentation

**Abstract:**

This page contains the links to the Seismic Group testing and commissioning documentation of the Advanced LIGO SEI installation.

Per M1000211 Testing requirement, it contains:

**1) Device Level Testing:**

- Electromagnetic Actuators: T0900564-v2
- Trillium
- GS13

Data for the GS13 testing after modification are in the SVN at: `SeismicSVN\seismic\Common\Data\alIGO_GS13_TestData\PostMod_TestResults_PDFs`.  
Instruments location is summarized in: E1000058

- L4C
- CPS

**2) Module Testing****3) Sub-Assembly Level Testing**

- Trillium Pod Assembly
- GS13 Pod Assembly
- L4C Pod Assembly

**4) Major assembly level testing:**

- aLIGO HAM-ISI Testing and Commissioning Documentation
- aLIGO BSC-ISI Testing and Commissioning Documentation
- aLIGO HAM-HEPI Testing and Commissioning Documentation
- aLIGO BSC-HEPI Testing and Commissioning Documentation

### aLIGO HAM-ISI Testing and Commissioning Documentation

(QA: Uncertified)

#### Abstract:

The documentation include:

#### 1) HAM-ISI, Pre-integration Testing, Phase I (post-assembly, before storage)

##### → Procedure:

- E1000309, aLIGO HAM-ISI, Pre-integration Testing Procedure, Phase I (post-assembly, before storage)

##### → Tests reports for the tests stands used to do the Pre-Integration testing:

- E1000341, HAM-ISI LHO test stand: software, electronic checks, and user guide  
- E1000300, HAM-ISI LLO test stand: software, electronic checks, and user guide

##### → Tests reports and results for each unit, including the data (one test report per HAM-ISI):

- E1000310, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LHO Unit #1. (Testing done, documentation in progress)  
- E1000311, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LHO Unit #2. (Testing in progress)  
- E1000312, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LHO Unit #3. (Upcoming)  
- E1000313, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LHO Unit #4. (Upcoming)  
- E1000314, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LHO Unit #5. (Upcoming)  
- E1000323, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LHO Unit #6. (Upcoming)  
- E1000324, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LHO Unit #7. (Upcoming)  
  
- E1000325, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LLO Unit #1. (Testing done, documentation in progress)  
- E1000326, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LLO Unit #2. (Upcoming)  
- E1000327, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LLO Unit #3. (Upcoming)  
- E1000328, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LLO Unit #4. (Upcoming)  
- E1000329, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LLO Unit #5. (Upcoming)  
- E1000330, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LLO Unit #6. (Upcoming)  
- E1000331, aLIGO HAM-ISI, Pre-integration Test Report, Phase I, LLO Unit #7. (Upcoming)

#### 2) HAM-ISI, Pre-integration Testing, Phase II : Final tests done after storage and before insertion (This phase has not started yet).

#### 3) HAM-ISI, Integration Phase Testing: Procedure and results related to the commissioning in the chamber (This phase has not started yet).

## E1000341

## HAM-ISI LHO test stand: software, electronic checks, and user guide

LIGO- E1000341

- Step 3 - Software check

For Detailed info on all software, please see Appendices 4 & 5.

- ssh Connection From A Workstation To The Front End (i.e. Test Stand Computer)

*(Obsolete Test)*

The test stand computer configuration is described in appendix 4. An ssh (secure shell) connection is necessary to access and work on the Front End computer.

To test the connection, open a terminal on a workstation and connect using the command:

```
> ssh -X controls@stormy.ligo-wa.caltech.edu
**Password: contact Corey Gray**
```

→ ssh connection test:                      Passed: \_\_\_                      Failed: \_\_\_

Check List:  
**SSH Connection**  
**SVN**  
**MEDM**  
**Dataviewer**  
**Awgstream**

**DTT**  
**Foton**  
**Matlab**  
**mDV and ligodv**  
**ini file**  
**Data acquisition package**

## E1000309

## aLIGO HAM-ISI, Pre-integration Testing Procedure, Phase I (post-assembly, before storage)

LIGO-E1000309

I. Pre-Assembly Testing▪ Step 1: Position Sensors

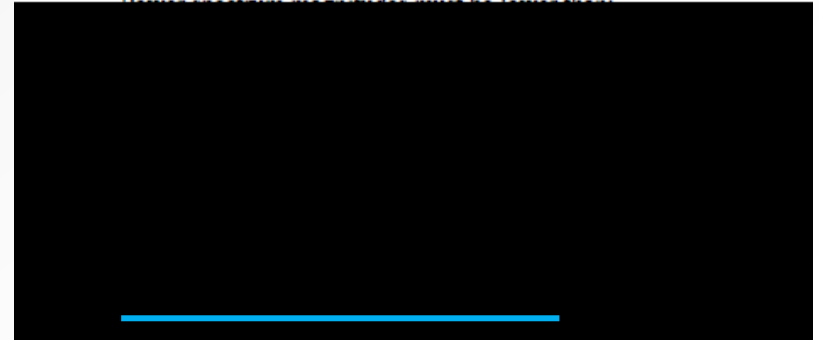

Set up the offset on the jig. The test jig is shown on the picture below. Shim washers are used to set up the gap between the position sensor and the jig. A caliper is used to measure the jig cutout depth and the shims thickness.

6 shims are measured at 0.058". The cutout in the jig is 0.030" deep. The sensor extends out approximately 0.007" away from the surface where the shims are placed. So the gap is set up to be 0.081" nominal.

Acceptance Criteria:

Remove sensor from jig and measure the distance

LIGO-E1000309

## II. Tests to be performed during assembly

- *Step 2: Check gaps under Support Posts*

**Procedure to follow for this test:**

Try to push a 0.001 inch shim between the Support Post, Gussets and Stage 0 along the edges shown below.

Figure - Showing edges that need checked on support posts and gussets

LIGO-E1000309

### III. Tests to be performed after assembly

This section describes the tests performed to check and validate the subassemblies and overall assembly good functioning. From step 8, data collected, Matlab scripts and figures, documentation have to be posted on the local copy of the SVN. Appendix 4 describe the path used to store data. X1 and X2 are respectively the Hanford and the Livingston test stand. In this procedure document, an example is given for the test realized on HAM-ISI-LLO-unit1. SVN information that refer to sites, units and dates are colored **in red** (Scripts, data and figures names). Black is used for generic name.

#### ▪ Step 1 - Actuators Inventory

Write down the actuators serial number in the table below.

Actuator	Actuator S/N
H1	
H2	
H3	
V1	
V2	
V3	

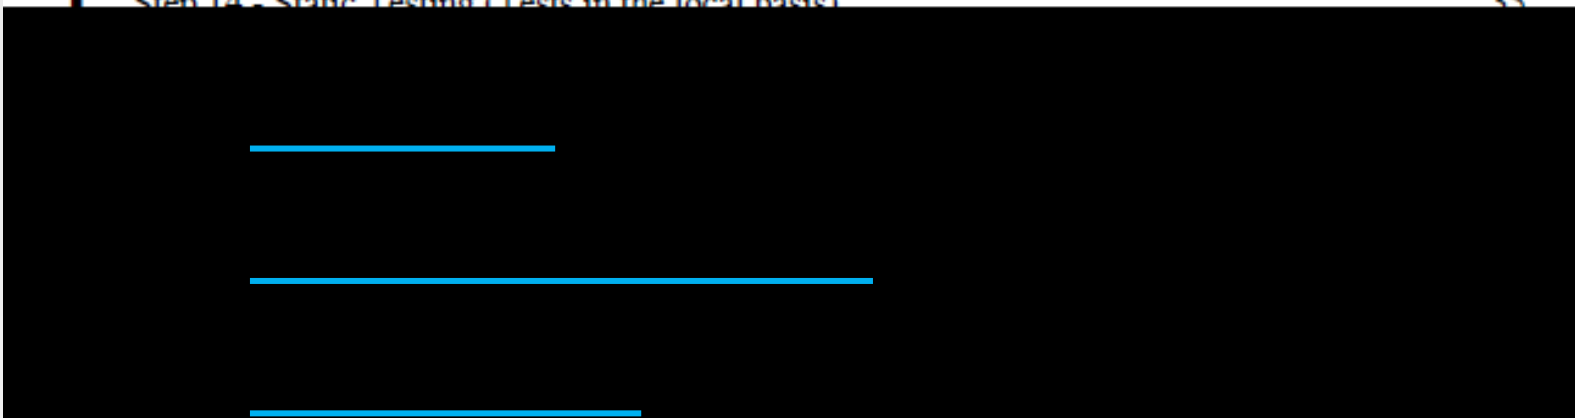

Table - Actuators' inventory

#### Acceptance Criteria

- Inventory is complete

III. Tests to be performed after assembly .....	16
▪ Step 1 - <u>Actuators Inventory</u> .....	16
▪ Step 2 - Sensors Inventory .....	16
▪ Step 3 - Electronics Inventory.....	17
▪ Step 4 - Set up sensors gap .....	18
▪ Step 5 - Measure the Sensor gap.....	19
▪ Step 6 - <u>Check Sensor gaps after the platform release</u> .....	20
▪ Step 7 - Check range of motion (hand pushing) .....	21
○ Step 7.1 – Test N°1 .....	21
○ Step 7.2 – Test N°2 .....	22
▪ Step 8 - Capacitive position sensor Power Spectrum .....	23
▪ Step 9 - <u>GS13 power spectrum</u> .....	25
○ Step 9.1 – Table locked and unlocked (free) .....	25
○ Step 9.2 – Table tilted .....	25
▪ Step 10 - Coil Driver, cabling and resistance check .....	28
▪ Step 11 - <u>Actuators Sign and range of motion (Local drive)</u> .....	30
○ Step 11.1 - Actuators sign.....	30
○ Step 11.2 - Range of motion - Local drive.....	31
▪ Step 12 - Vertical Sensor Calibration .....	32
▪ Step 13 - <u>Vertical Spring Constant</u> .....	34
▪ Step 14 - Static Testing (Tests in the local basis) .....	35

GS13, Cartesian to Cartesian measurement, Undamped

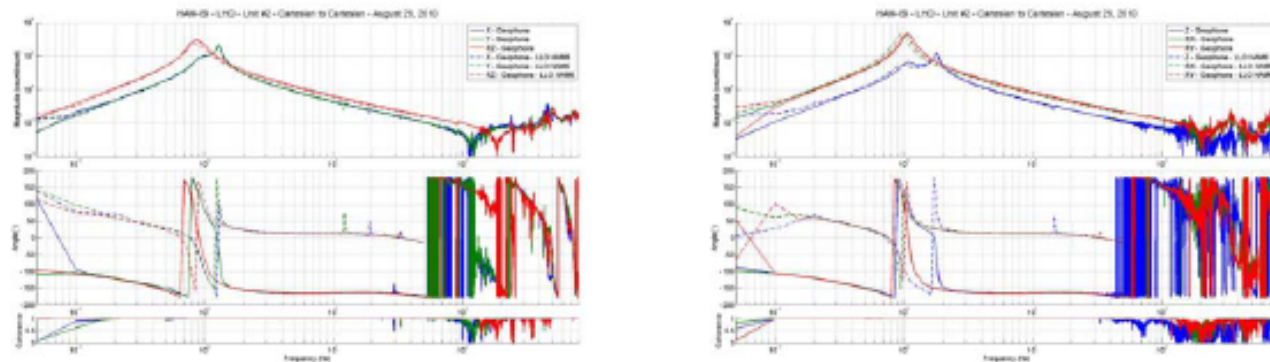

Figure - Cartesian to Cartesian measurements comparison with HAM6 – GS13

E1000488

## aLIGO BSC-ISI Testing Procedure, Phase III (After insertion, commissioning in the chamber)

### Step\_5\_Damping\_Loops\_ST2\_LASTI\_Prototype\_BSC\_ISI

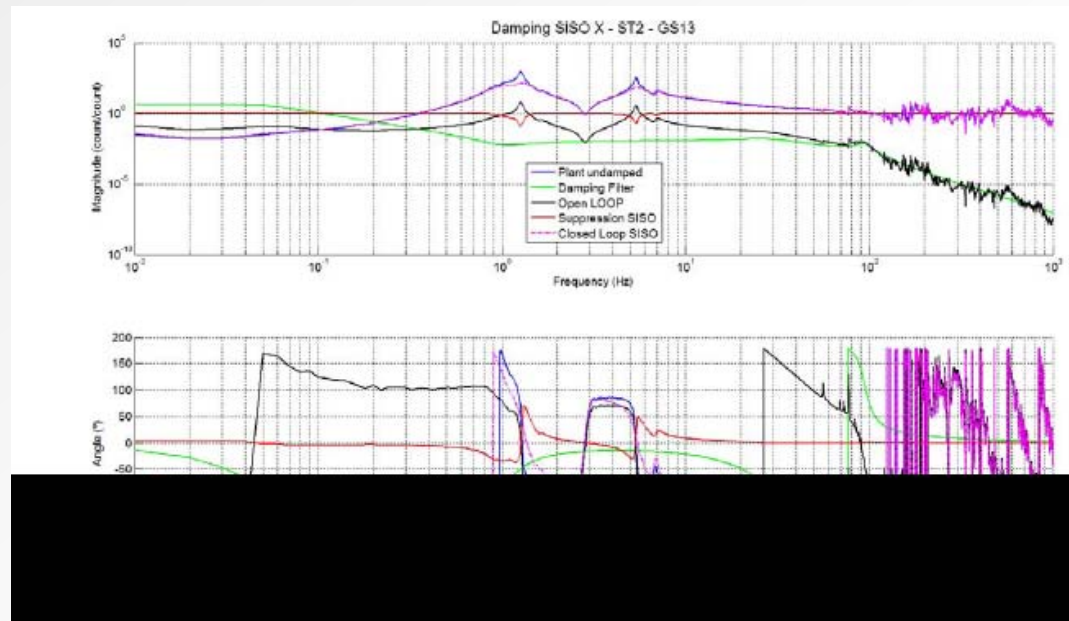

During this step, damping filters of stage 2 are designed. In details, this script:

- Loads the Cartesian to Cartesian transfer functions of the undamped structure (measured or simulated).
- Computes the gain of the damping filters. Filters are designed in a SISO configuration. The filters shape (poles and zeros) is the same for every DOF and for every unit.
- Computes the SISO and the MIMO transfer functions when the Damping Filters of stage 1 are engaged

If isolation and damping filter are engaged, the control drive transfer functions are given by:

$$U_1/Exc = [TF_{C2C}CPS_{CS} * CPS_{Blend\ CS} + TF_{C2C}GEO_{CS} * GEO_{Blend\ CS}] * Controller_{S1} \\ + TF_{C2C}GEO_{CS} * Damping_{S1}$$

$$U_2/Exc = [TF_{C2C}CPS_{FN} * CPS_{Blend\ FN} + TF_{C2C}GEO_{FN} * GEO_{Blend\ FN}] * Controller_{S2} \\ + TF_{C2C}GEO_{FN} * Damping_{S2}$$

A	B	C	D	E	F	G
	Monday	Tuesday	Wednesday			
	18-Oct-10	19-Oct-10	20-Oct-10			
<b>Chamber 1</b>						<b>General Description:</b>
Air Pump up/Down/Vacuum	Vacuum	Vacuum	Vacuum			- The goal of the table is to indicate when you plan, start and finish to work on a module
Module 1 (Ope #1)			User 1			- The table on the left illustrate an example of interactive planning
Module 1 (Ope #2)						- This example contains 2 chambers and 3 modules
Module 1 (Ope #3)						- Up to three operations a day can be recorded for each module
Module 1 (Ope #1)	User 1	User 1				- Information related to an operation is contained in the "comment" associated with the cell. To make it appear, let the cursor on the cell for a fraction of seconds.
Module 1 (Ope #2)	User 1					- An operation can be a hardware intervention, a series of test, a series of measurements...
Module 1 (Ope #3)						- If you have more than three operations in one day on the same module (e.g. many tests), just group them
Module 1 (Ope #1)			User 2			- The table is public on the web
Module 1 (Ope #2)						- You need to be on the user list to have write access
Module 1 (Ope #3)						
<b>Chamber 2</b>						<b>To be added to the user list:</b>
Air Pump up/Down/Vacuum	Vacuum	Vacuum	Vacuum			- Create a google account
Module 1 (Ope #1)	User 3	User 3	User 3			- Send you google account address to Fabrice: fabrice@ligo.mit.edu
Module 1 (Ope #2)		User 4				
Module 1 (Ope #3)						<b>How to proceed to indicate an operation:</b>
Module 1 (Ope #1)			User 3			1) Copy paste an existing cell (one of yours if there is one)
Module 1 (Ope #2)						2) Change the color to white, meaning the operation is planned
Module 1 (Ope #3)						3) Double left click to change the user name in the cell (if applicable)
						4) Click in the yellow comment window associated with the cell, and fill the fields:
						- Operation Start date
						- Estimate end time. For example "8.a.m. (+1 day)" for a measurement finishing the day after in the morning.
						- Contact information
						- Operation Brief description
						5) Change the Cell color to orange when you actually start the operation
						6) Change the Cell color to dark grey when the operation is finished
						<b>Color Code:</b>
						<b>User Name</b> White Cell means the operation is planned
						<b>User Name</b> Orange Cell means the operation is in progress
