## ***Introduction***

This document summarizes the different tests which have been done to validate HEPI L1 HAM2. All the HEPI testing reports must be posted under:

LIGO-E1300454: aLIGO HEPI Testing Reports

## Sub-Components Testing

- Kaman Inductive Position Sensors: calibration, linearity, factory data, noise measurements (E0900426 – HEPI Kaman Sensor Receiving Analysis - Results posted in the SVN )

Note: these serial numbers have not been recorded at the time of install and are not hidden.

- HEPI actuator linearity test (E1100338 – aLIGO HEPI Actuators Test Results).

Note: these serial numbers have not been recorded at the time of install but are still accessible and will be recorded.

- L4C test (Q0900007)

|        | Horizontal | Vertical |
|--------|------------|----------|
| Pier 1 | L41676     | L41618   |
| Pier 2 | L41664     | L41628   |
| Pier 3 | L41666     | L41634   |
| Pier 4 | L41682     | L41624   |

**Figures in SVN at:**

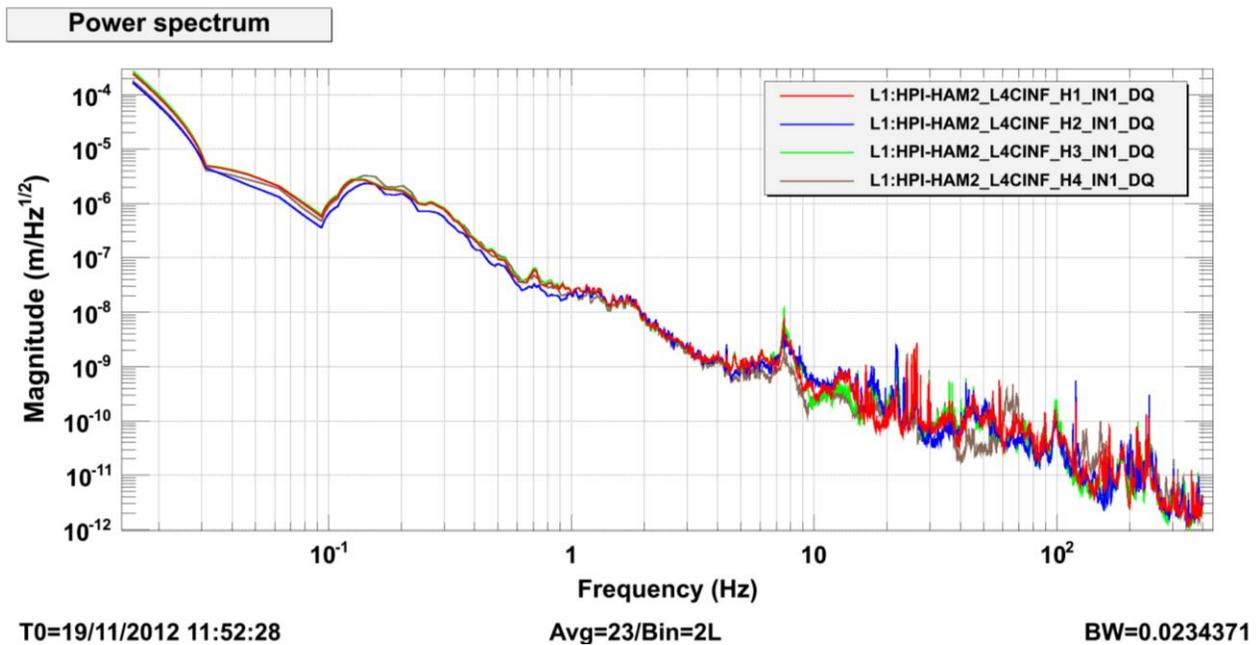

Figure 1: Power spectra of L1 HAM 2 horizontal L4Cs

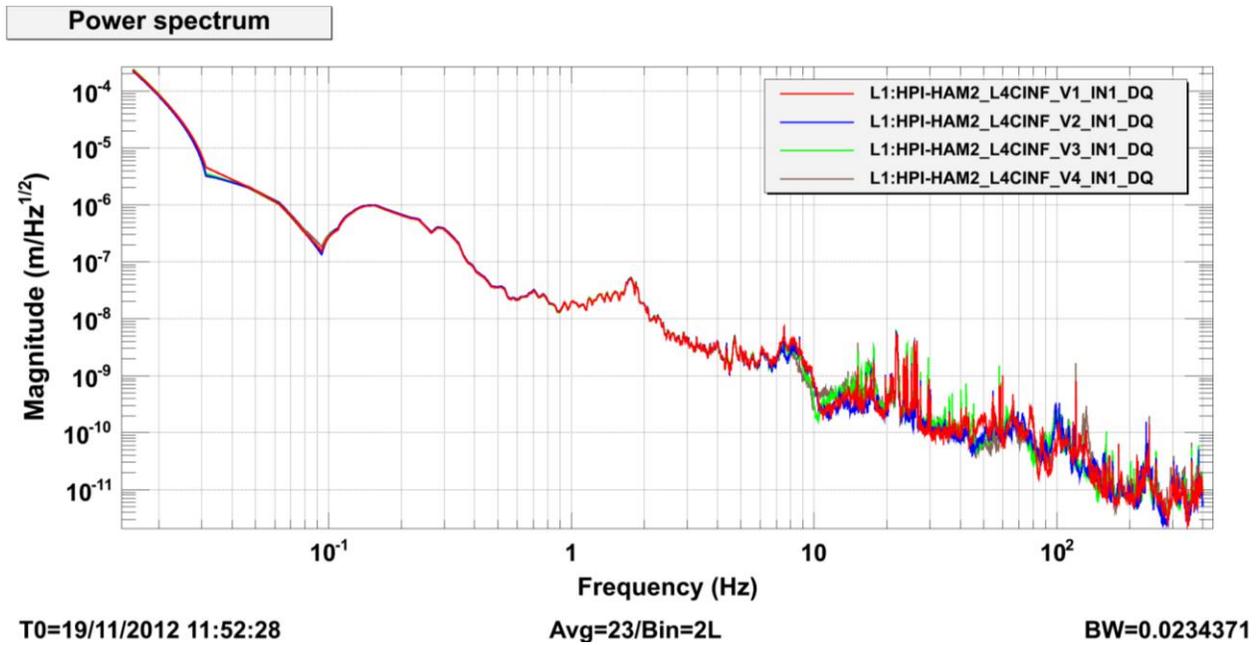

Figure 2: Power spectra of L1 HAM 2 horizontal L4Cs

# Assembly Validation

## 1.1 Load Cells assembly

- Spring attachment

For the HAM HEPI springs, check the assembly per [D1003359](#).

- Load cell values

HAM HEPI load cell capacity → 2000 lbs

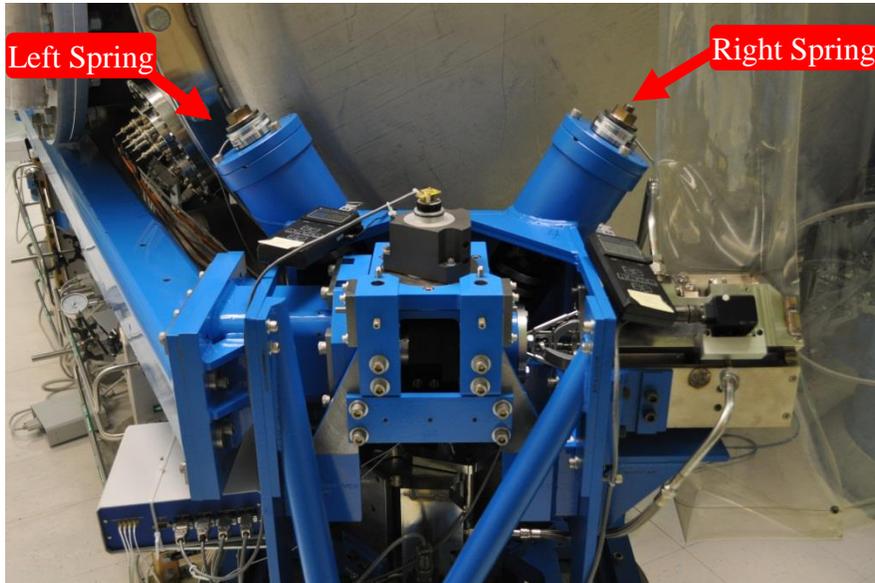

Figure 3: HAM-HEPI example at LASTI

|               | Left Spring (lbs) | Right Spring (lbs) |
|---------------|-------------------|--------------------|
| <b>Pier 1</b> |                   |                    |
| <b>Pier 2</b> |                   |                    |
| <b>Pier 3</b> |                   |                    |
| <b>Pier 4</b> |                   |                    |

**Acceptance criteria:**

- The values must not exceed 80% of the load cell capacity (<1600lbs for HAM).

**Test result:**

**Passed:** \_\_\_\_

**Failed:** \_\_\_\_

**Waived:** \_\_\_\_

Radial Back: 1.17"

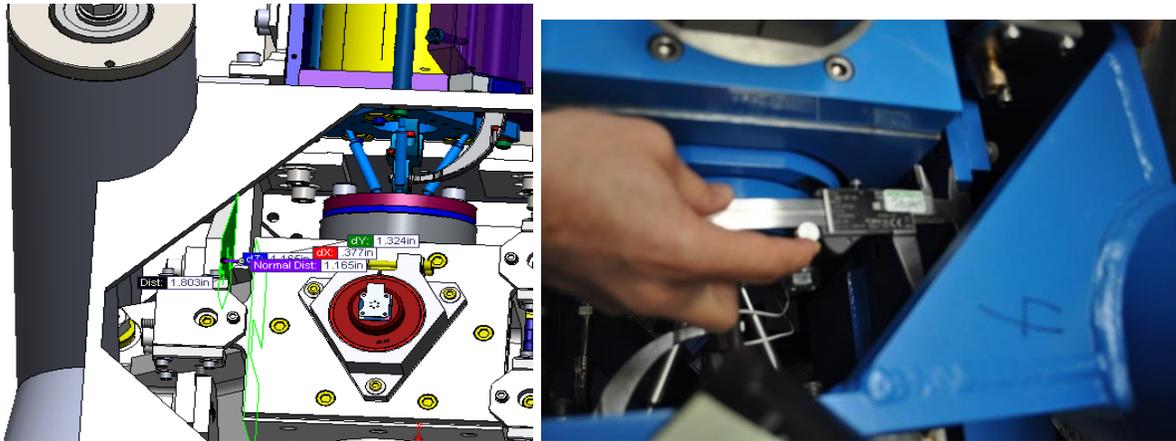

Figure 6: Boot location, radial back gap measurement

Radial Front: 1.42"

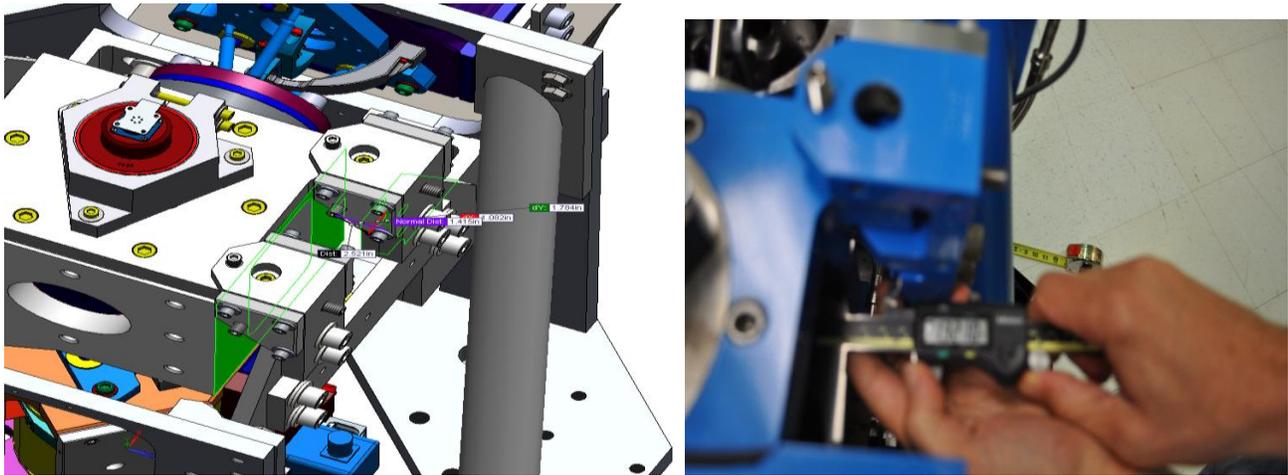

Figure 7: Boot location, radial front gap measurement

### 1.4 Check Stops Gaps

The stops must not touch the boot. There are 15 stops per boot, 5 per F bracket.

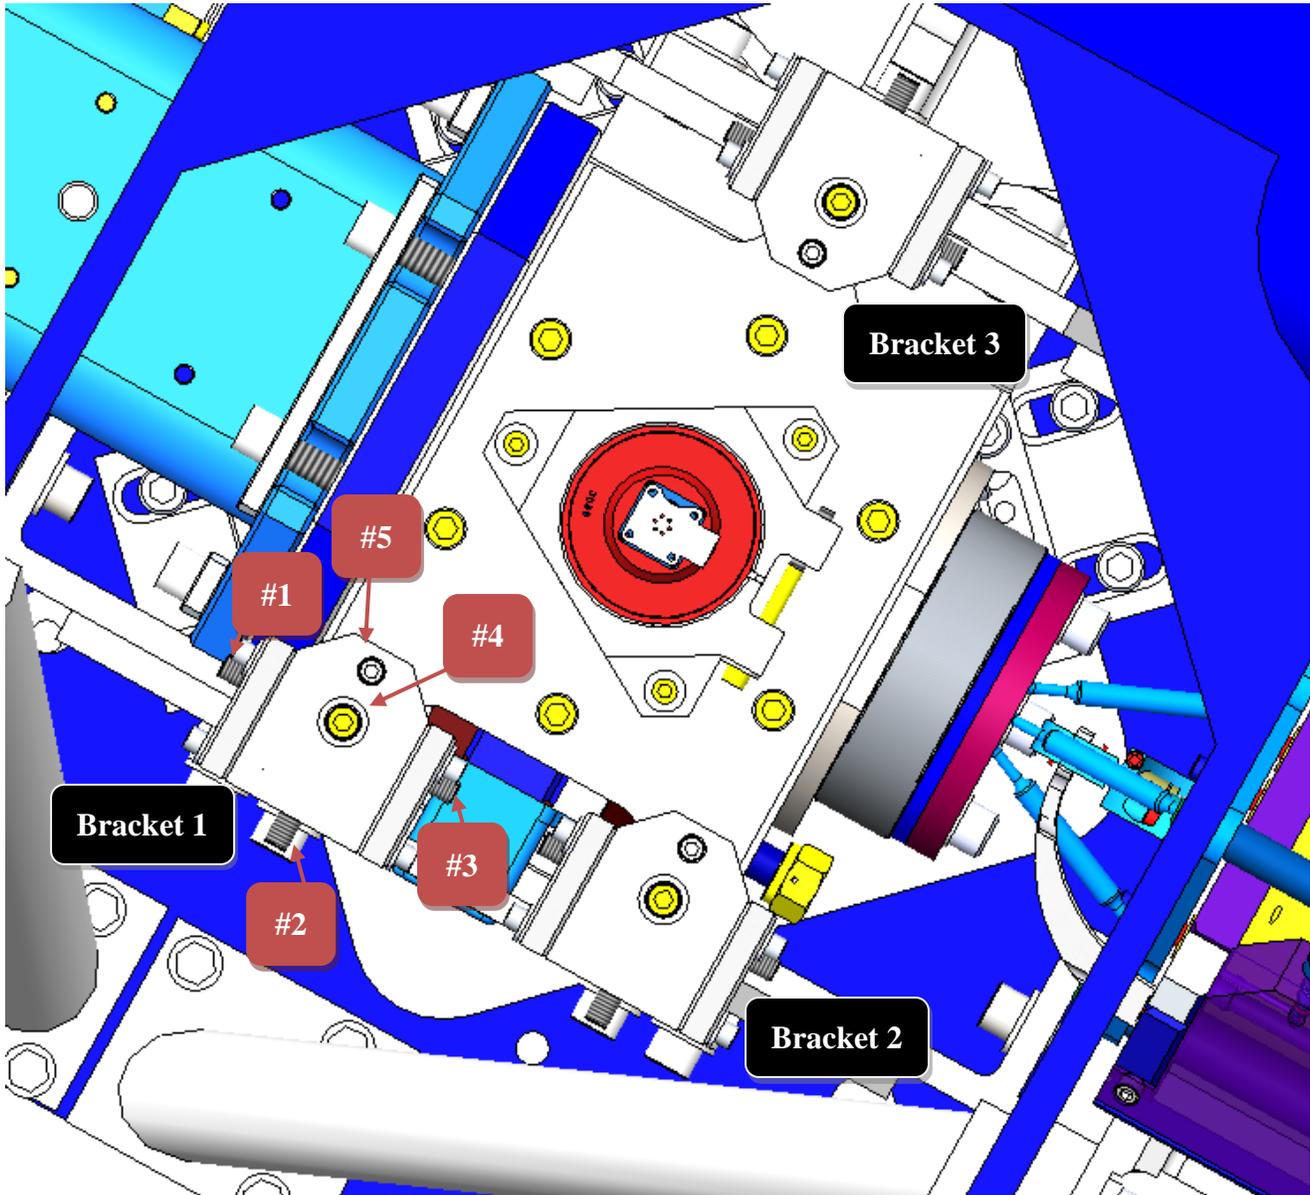

Figure 9: Locations of the boot's stops

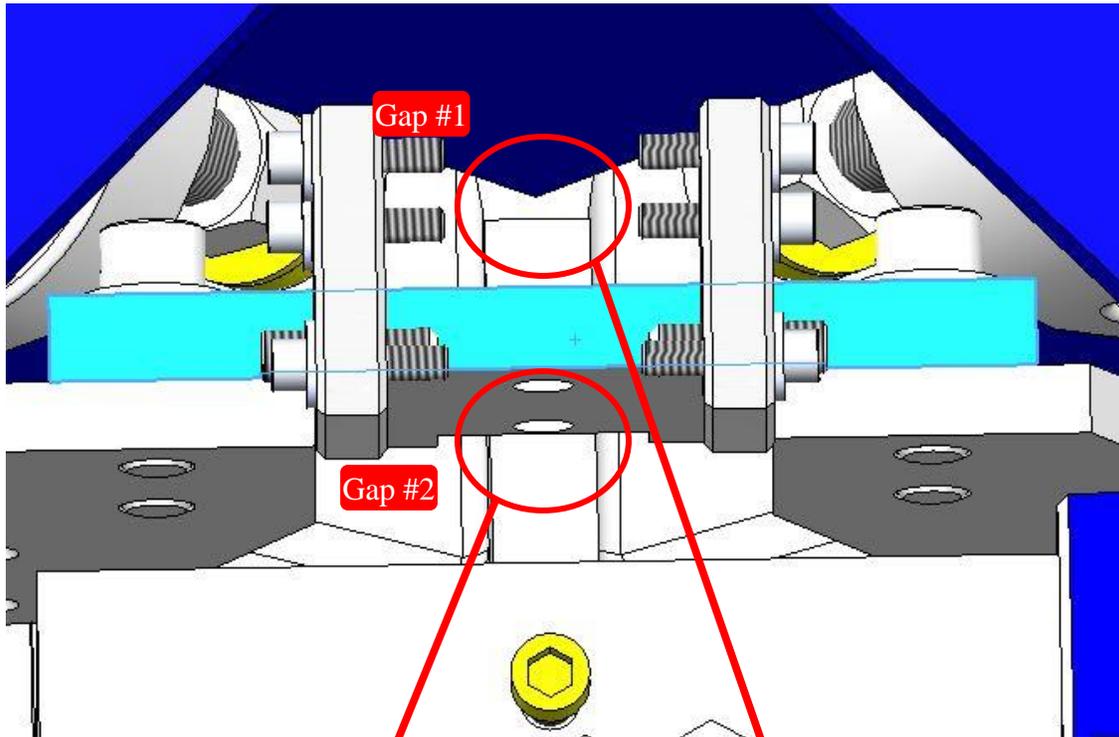

**Acceptance criteria:**

- A 0.062" shim must fit into the gaps

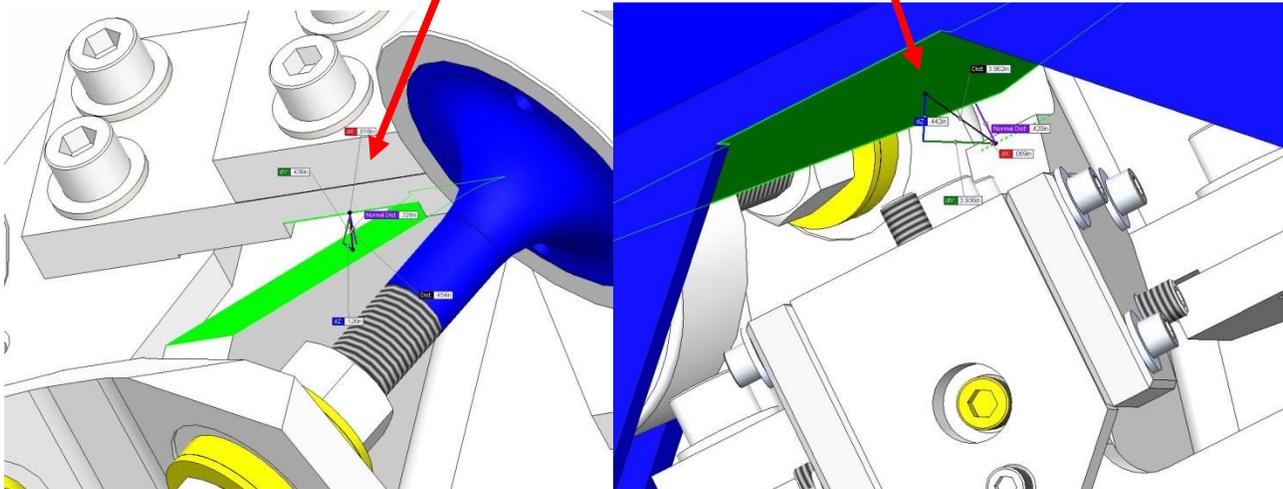

### 1.5 Gaps check

Four particular gaps need to be check.

**Note:** The F bracket has been removed for a better visibility

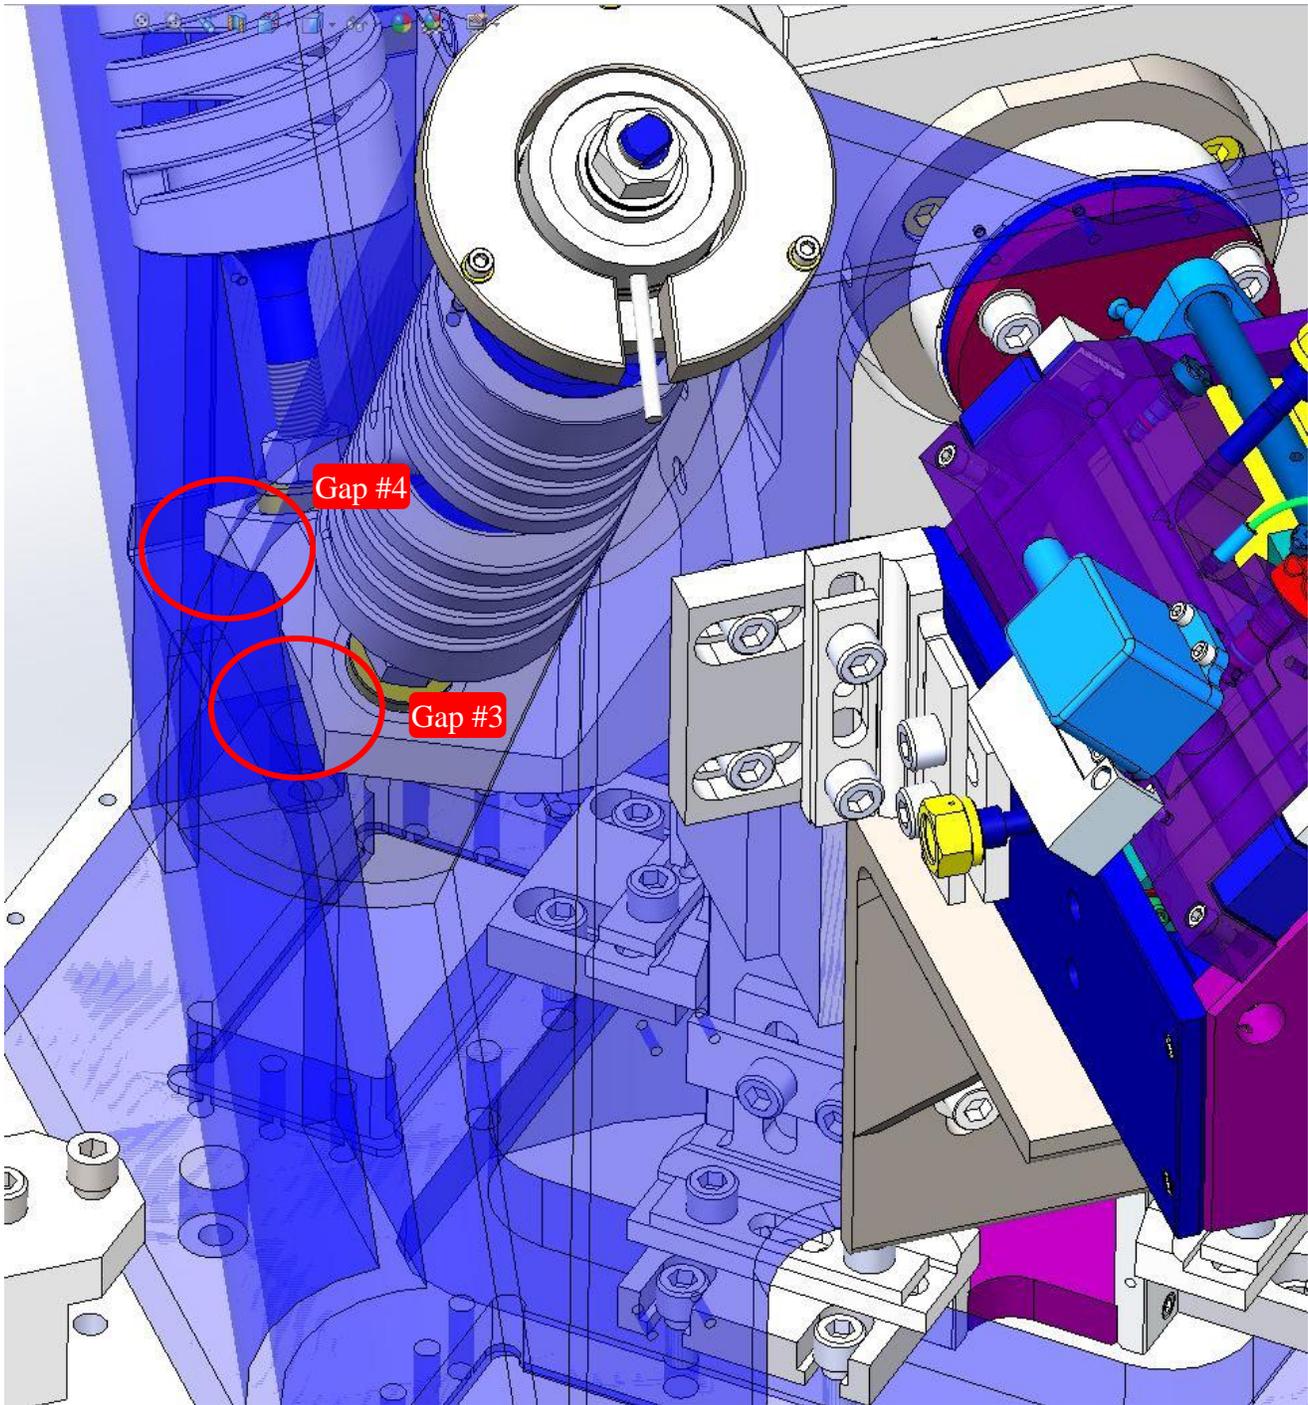

Figure 11: Gaps which need to be checked

**Acceptance criteria:**

- a 0.08” shim must fit in these two gaps

Issues/difficulties/comments regarding this test: Gap#1 is tricky to reach. At LASTI, the solution found was to tape the shim to an extension (rod, rigid ruler, etc.).

Gap#2 should be reachable by hand.

Gap#3 and 4 are tricky, but should also be doable (no picture)

**Gap#1**

**Figure 12: First gap to measure (on the first picture, we can see the tool used to measure that gap)**

**Gap#2**

**Figure 13: Second gap to measure**

### 1.7 Sensor ASD

Issues/difficulties/comments regarding this test:

Acceptance criteria:

Test result: Passed:  X  Failed:  \_\_\_  Waived:  \_\_\_

## 1.8 SUS-watchdogs interaction test

**Note: This test will be obsolete very soon, as the payload-HEPI WD connection is planned for removal.**

- . Set up a zero value on the payload watchdogs.
- . Check that the payload watchdog screen of HEPI tripped.
- . In the payload watchdog screen, click on the OVERRIDE button and reset the watchdog.
- . Do the same process for all the payloads

### Acceptance criteria:

- The HEPI must trip when the payload watchdogs are tripped
- The HEPI watchdogs could be reset when the OVERRIDE button is ON
- **Test result:**                      **Passed:   X**              **Failed:**              **Waived:**

**Note:** When this test is done, reset everything (OVERRIDE button OFF, put back the value on the payload watchdog).

### 1.9 Static Test local drive

Scripts files for processing in SVN at:

/SeiSVN/seismic/HEPI/Common/Testing\_Functions\_HEPI/Static\_Test\_Local\_Basis\_HEPI.m

## Conclusion

L1 HAM 2 HEPI seems good so far, we still have a few tests to run but should not have any issue with it. Here is a list of the tests that will be done:

- 1.1 Load Cell Assembly: the value will be recorded in this document
- 1.4 Check Stops Gaps: this test will be done when we unlock HEPI on L1 HAM 4
- 1.6 IPS Centering
- 1.9 Static Test Local Drive
- 1.10 Linearity Test and Range of Motion
- 1.14 Alignment Offsets

Some of the tests have been waived:

- 1.2 Bellows: the bellows are hard to access and tests are hard to proceed. After several discussions and brainstorming sessions, it has been decided not to measure the gaps on HEPI-HAM.
- 1.5 Gaps Check: this test can be waived if step 1.10 Linearity Test/Range of motion in the local basis passes because it means that the system has a full range of motion and is, therefore, free to move
- 1.11 Actuator Plate to Shield gap: this test was not performed because the Range of motion gave good results

So far, only 1.3 Boot Location fails, but the requirements might be a little bit too strict for this test and our results are in the ballpark, plus the other tests such as the local to local measurements and the valve test give good results so this shouldn't prevent us from approving this HEPI if the rest of the tests are good.
