Hi Nichole -

Sometime back, Rick ended up with a few viewport adapters from the 3IFO storage (likely an earlier Jodi arrangement) which he needed modified for camera use for H1/L1/3IFO. Long story short, he asked us to send them to LLO this week during his absence and we now see that they are in a 3IFO storage load in ICS:

https://ics-redux.ligo-la.caltech.edu/JIRA/browse/Storage-7133

As per our conversation, we have removed them from the storage load on ICS and are sending them to LLO. Issues with this that we need to follow up on are:

1) Why are there so many of these stowed away for 3IFO in this storage load-7133? Where did the total count come from? I suspect that some of these are actually SPARES.

2) Based on 1) above, we need to determine if we need to replace these with new ones since they may have actually been spares and not 3IFO ones.

The 3 pieces we have removed from the load are:

D080365-v2 - 155, 188, 226

Thanks-
Betsy
