

follow up on data from the M6.2 EQ in Russia
28 March, 2019
Brian Lantz, LIGO-G1902038

There is excess motion in the platforms, it seems to be correlated to vertical motion

already have a bunch of plots for this EQ at
<https://alog.ligo-la.caltech.edu/SEI/index.php?callRep=1456>

info

All channels are from LHO

```

% This is how I turned the CPS signals into velocity

```

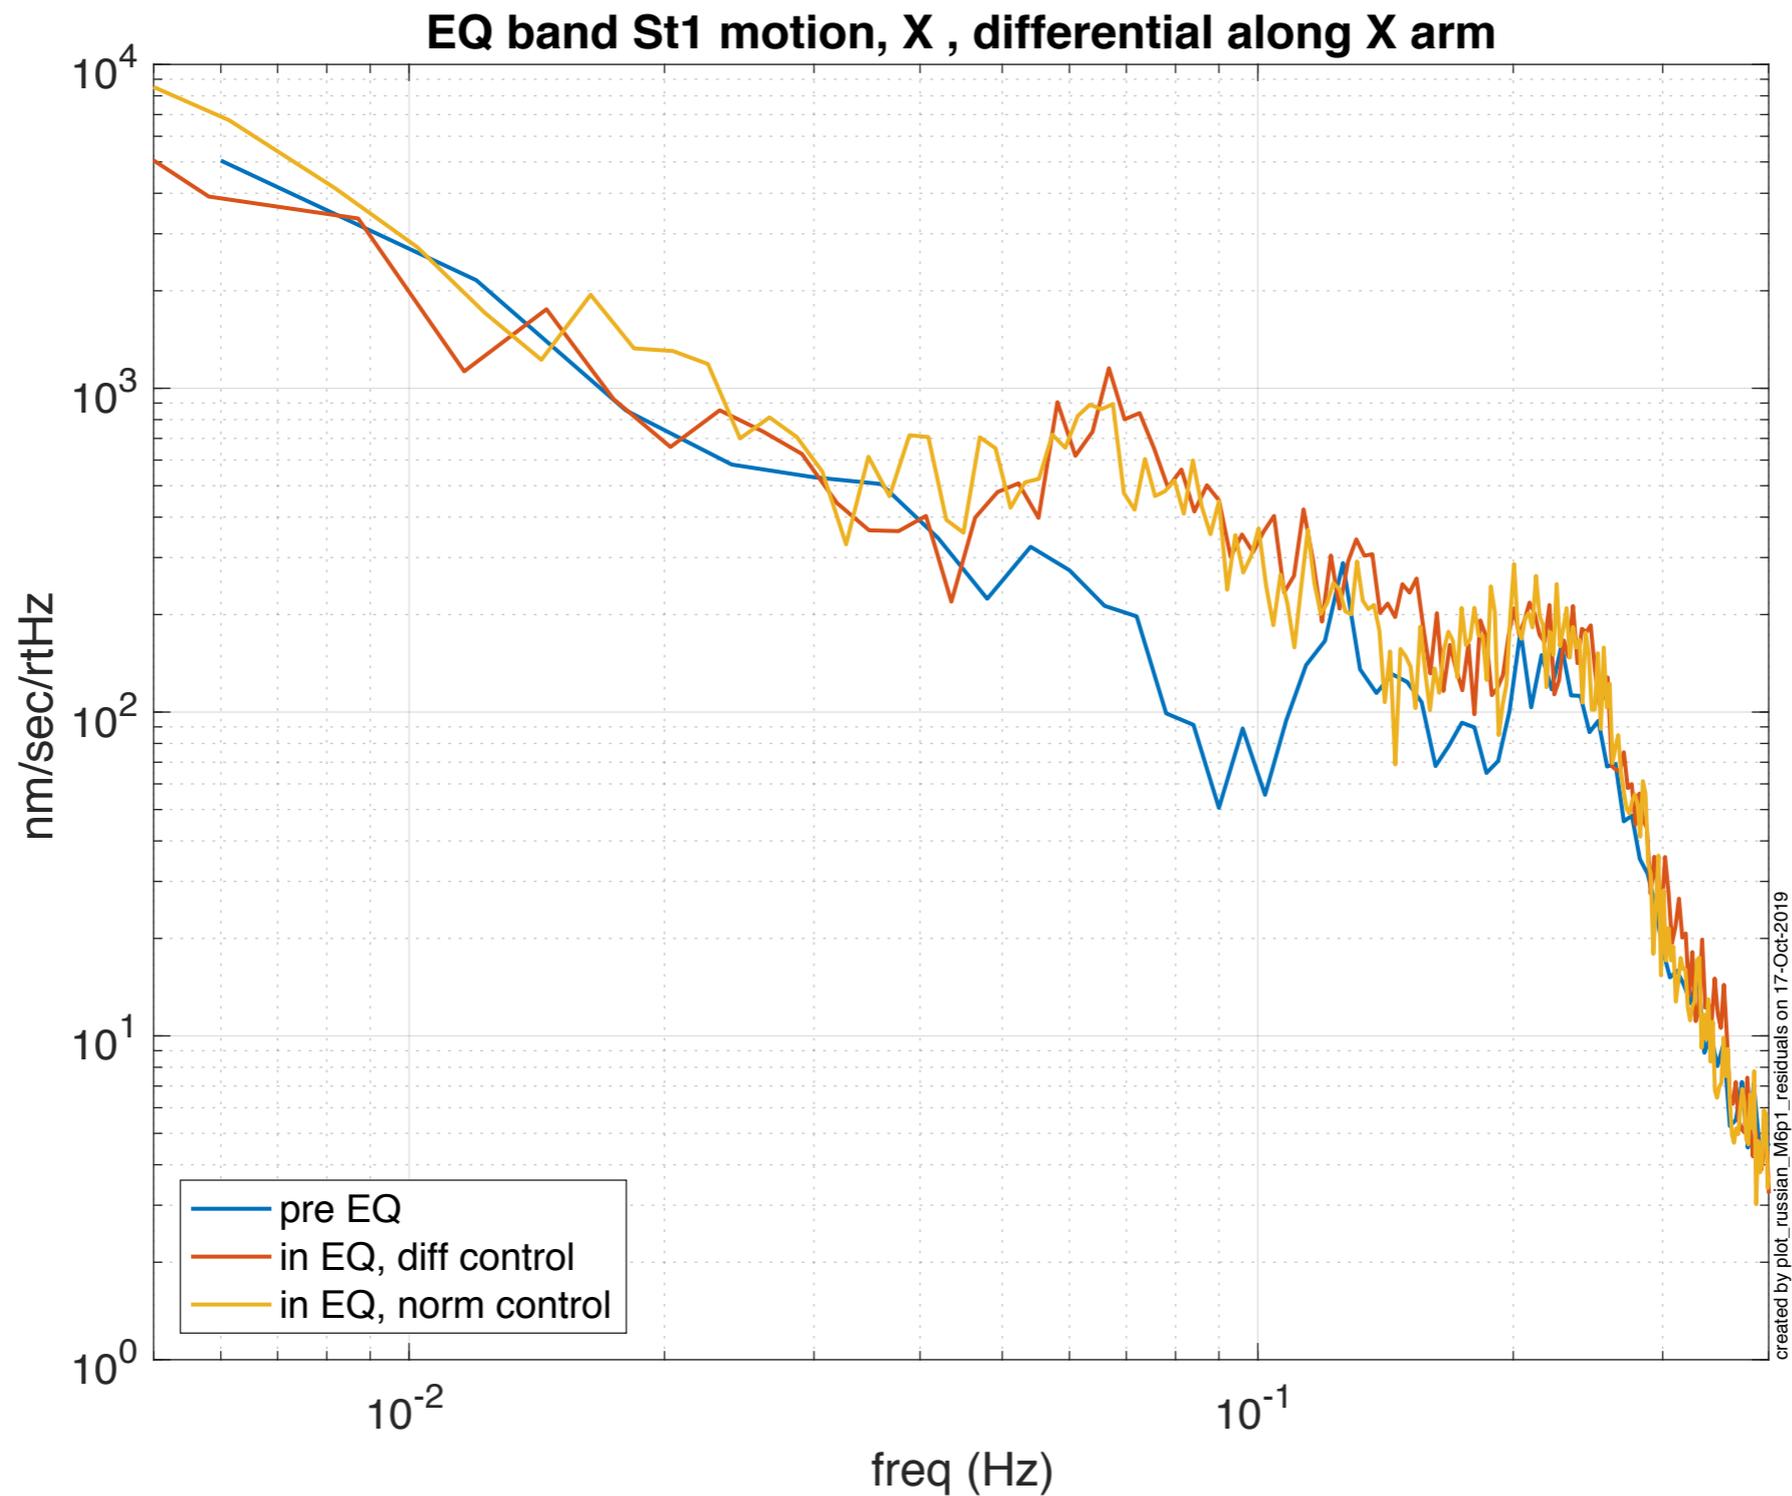

function out_struct = velocity(in_struct)
% finds the velocity w/ simple dx/dt.
% input is struct, output is struct
out_struct = in_struct;
dT = 1/out_struct.data.fs;
tmp = 1/ dT * diff(in_struct.data.downsampled_x);
out_struct.data.downsampled_x = [tmp, tmp(end)];
tmp = 1/ dT * diff(in_struct.data.EQx);
out_struct.data.EQx = [tmp, tmp(end)];
end

```

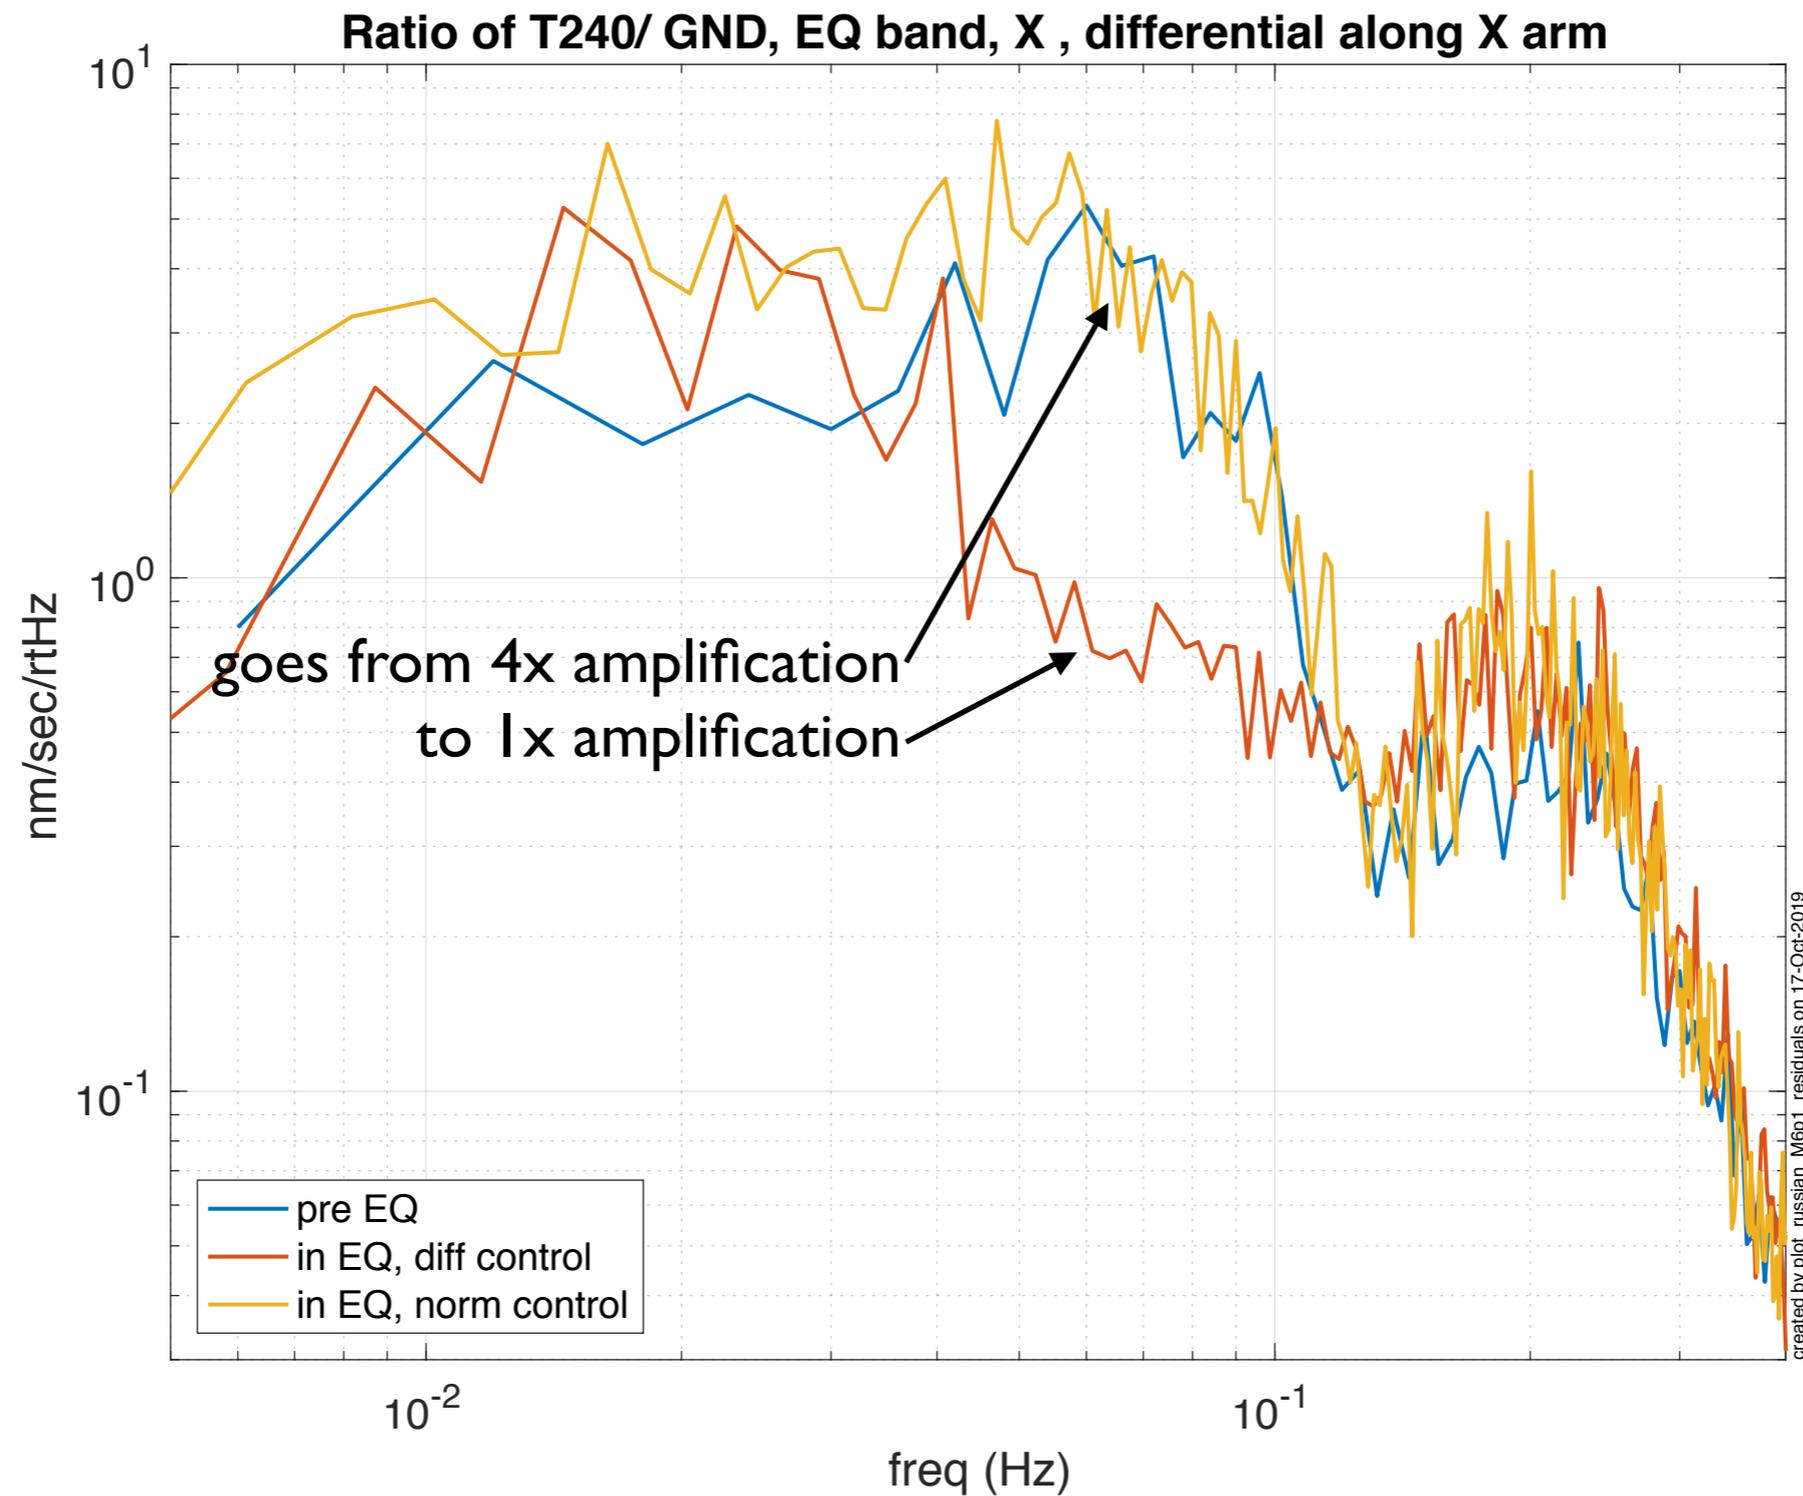

Differential isolation perf. mediocre

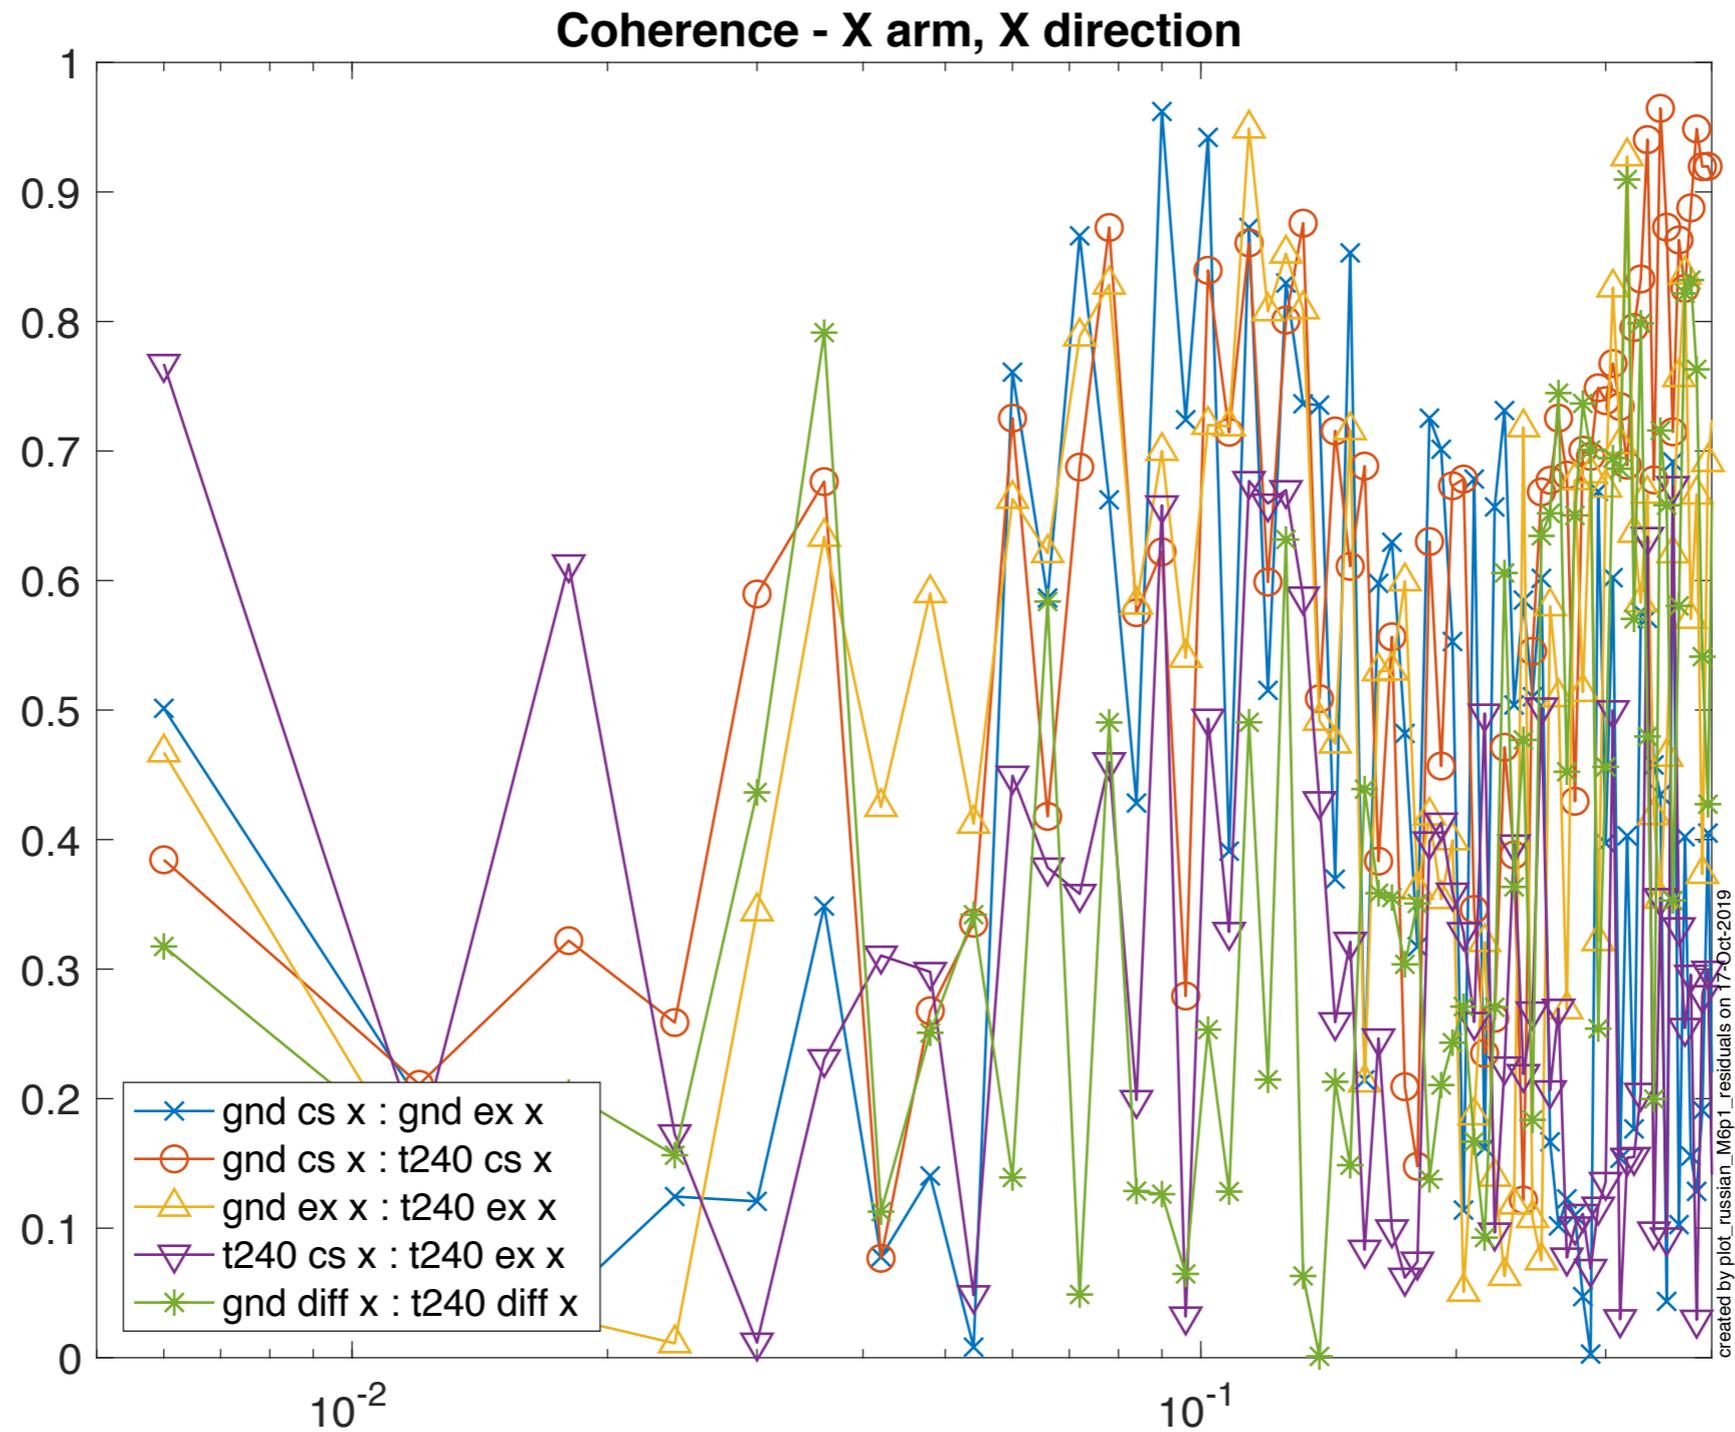

Differential isolation perf. mediocre

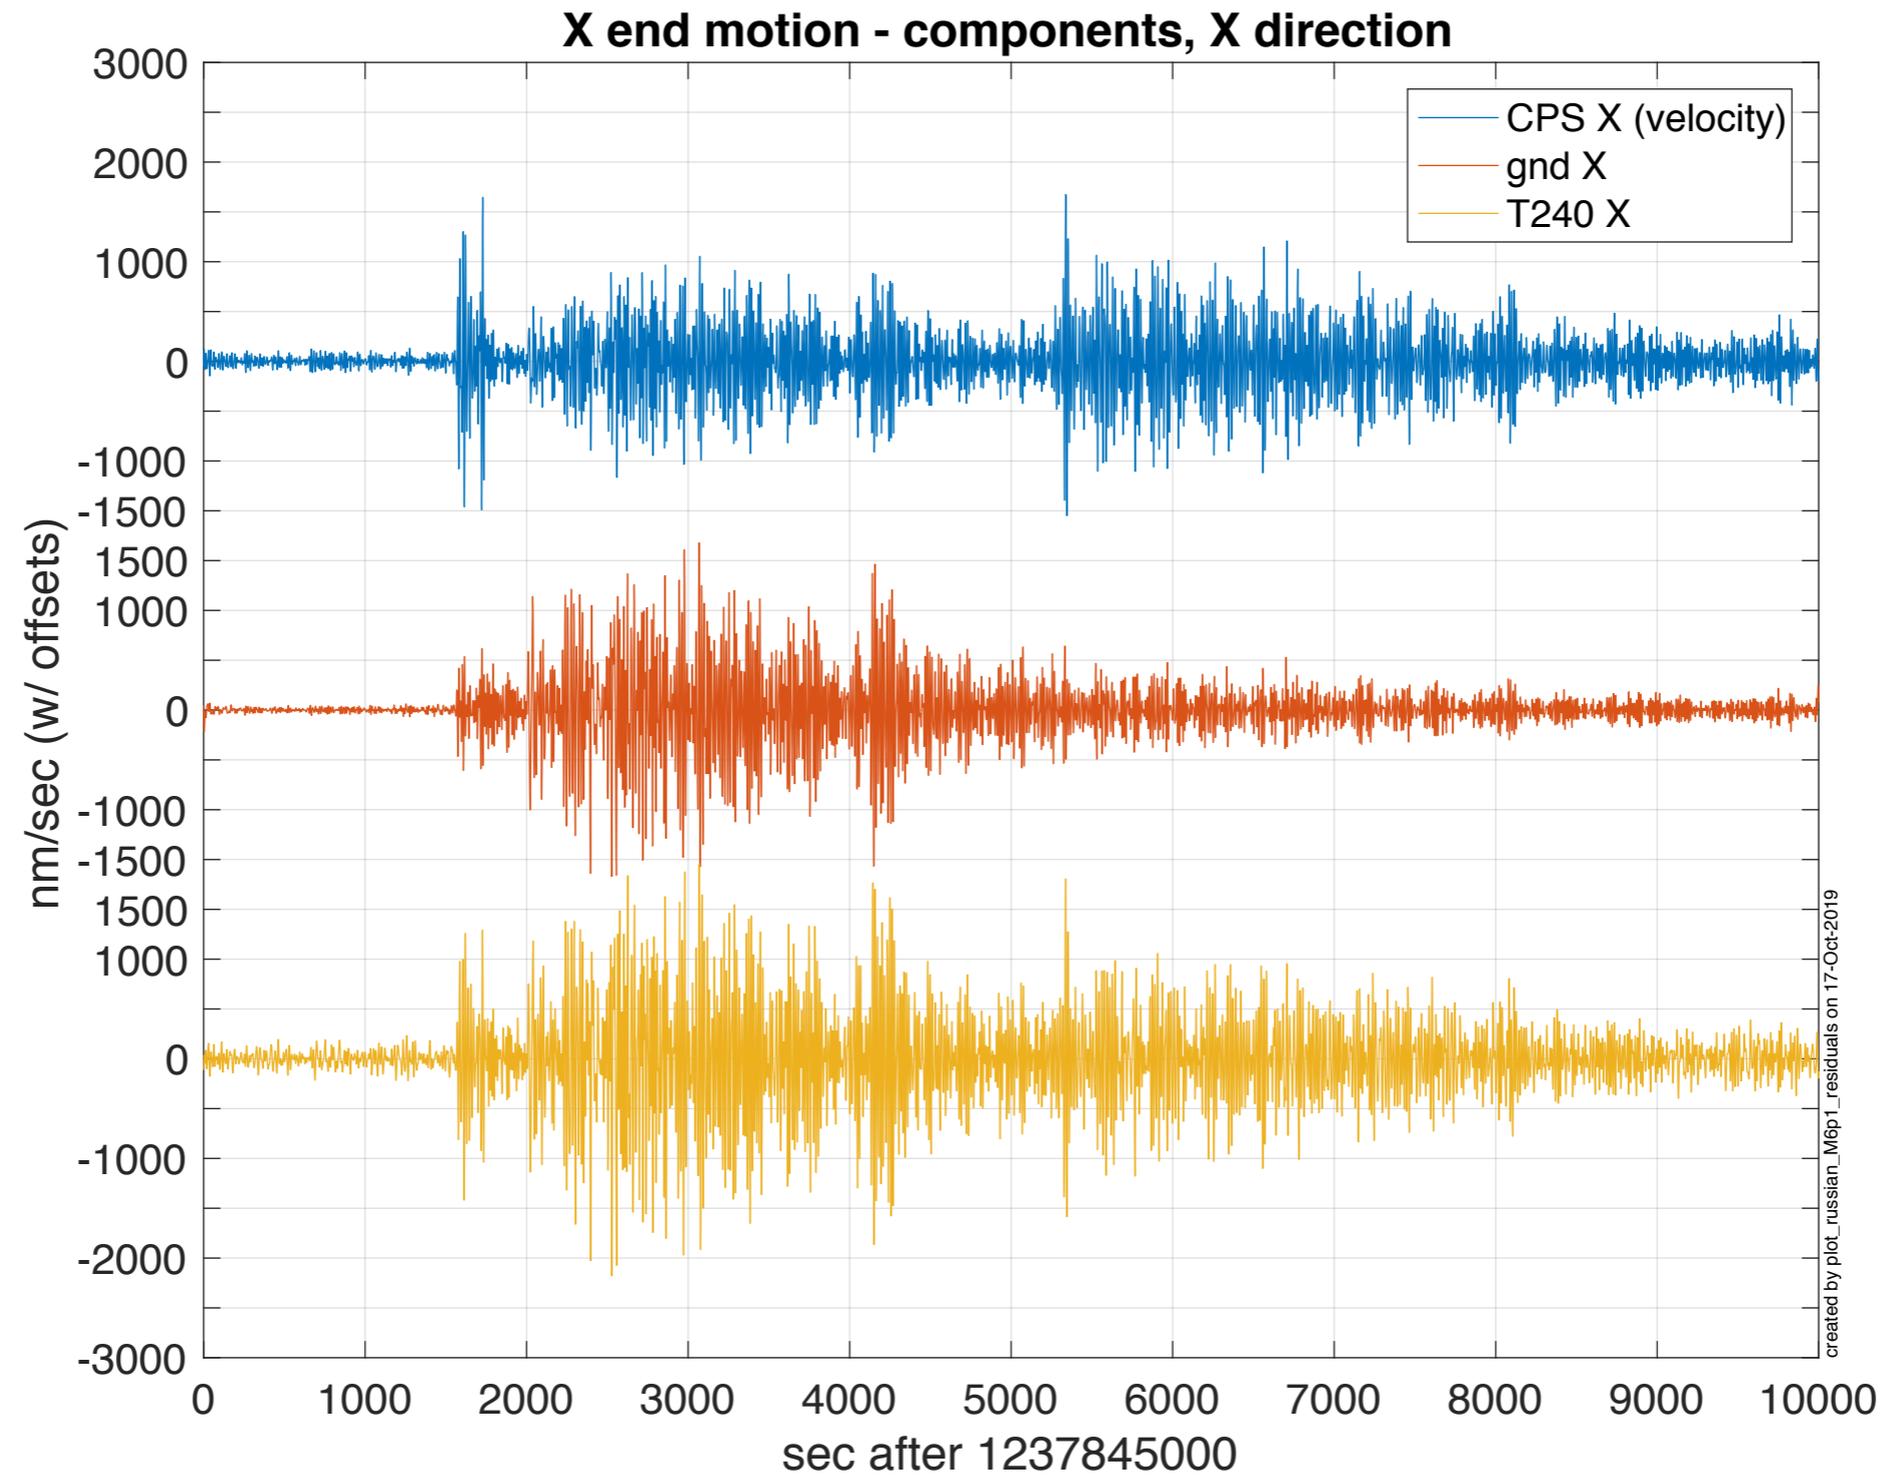

Differential isolation perf. mediocre

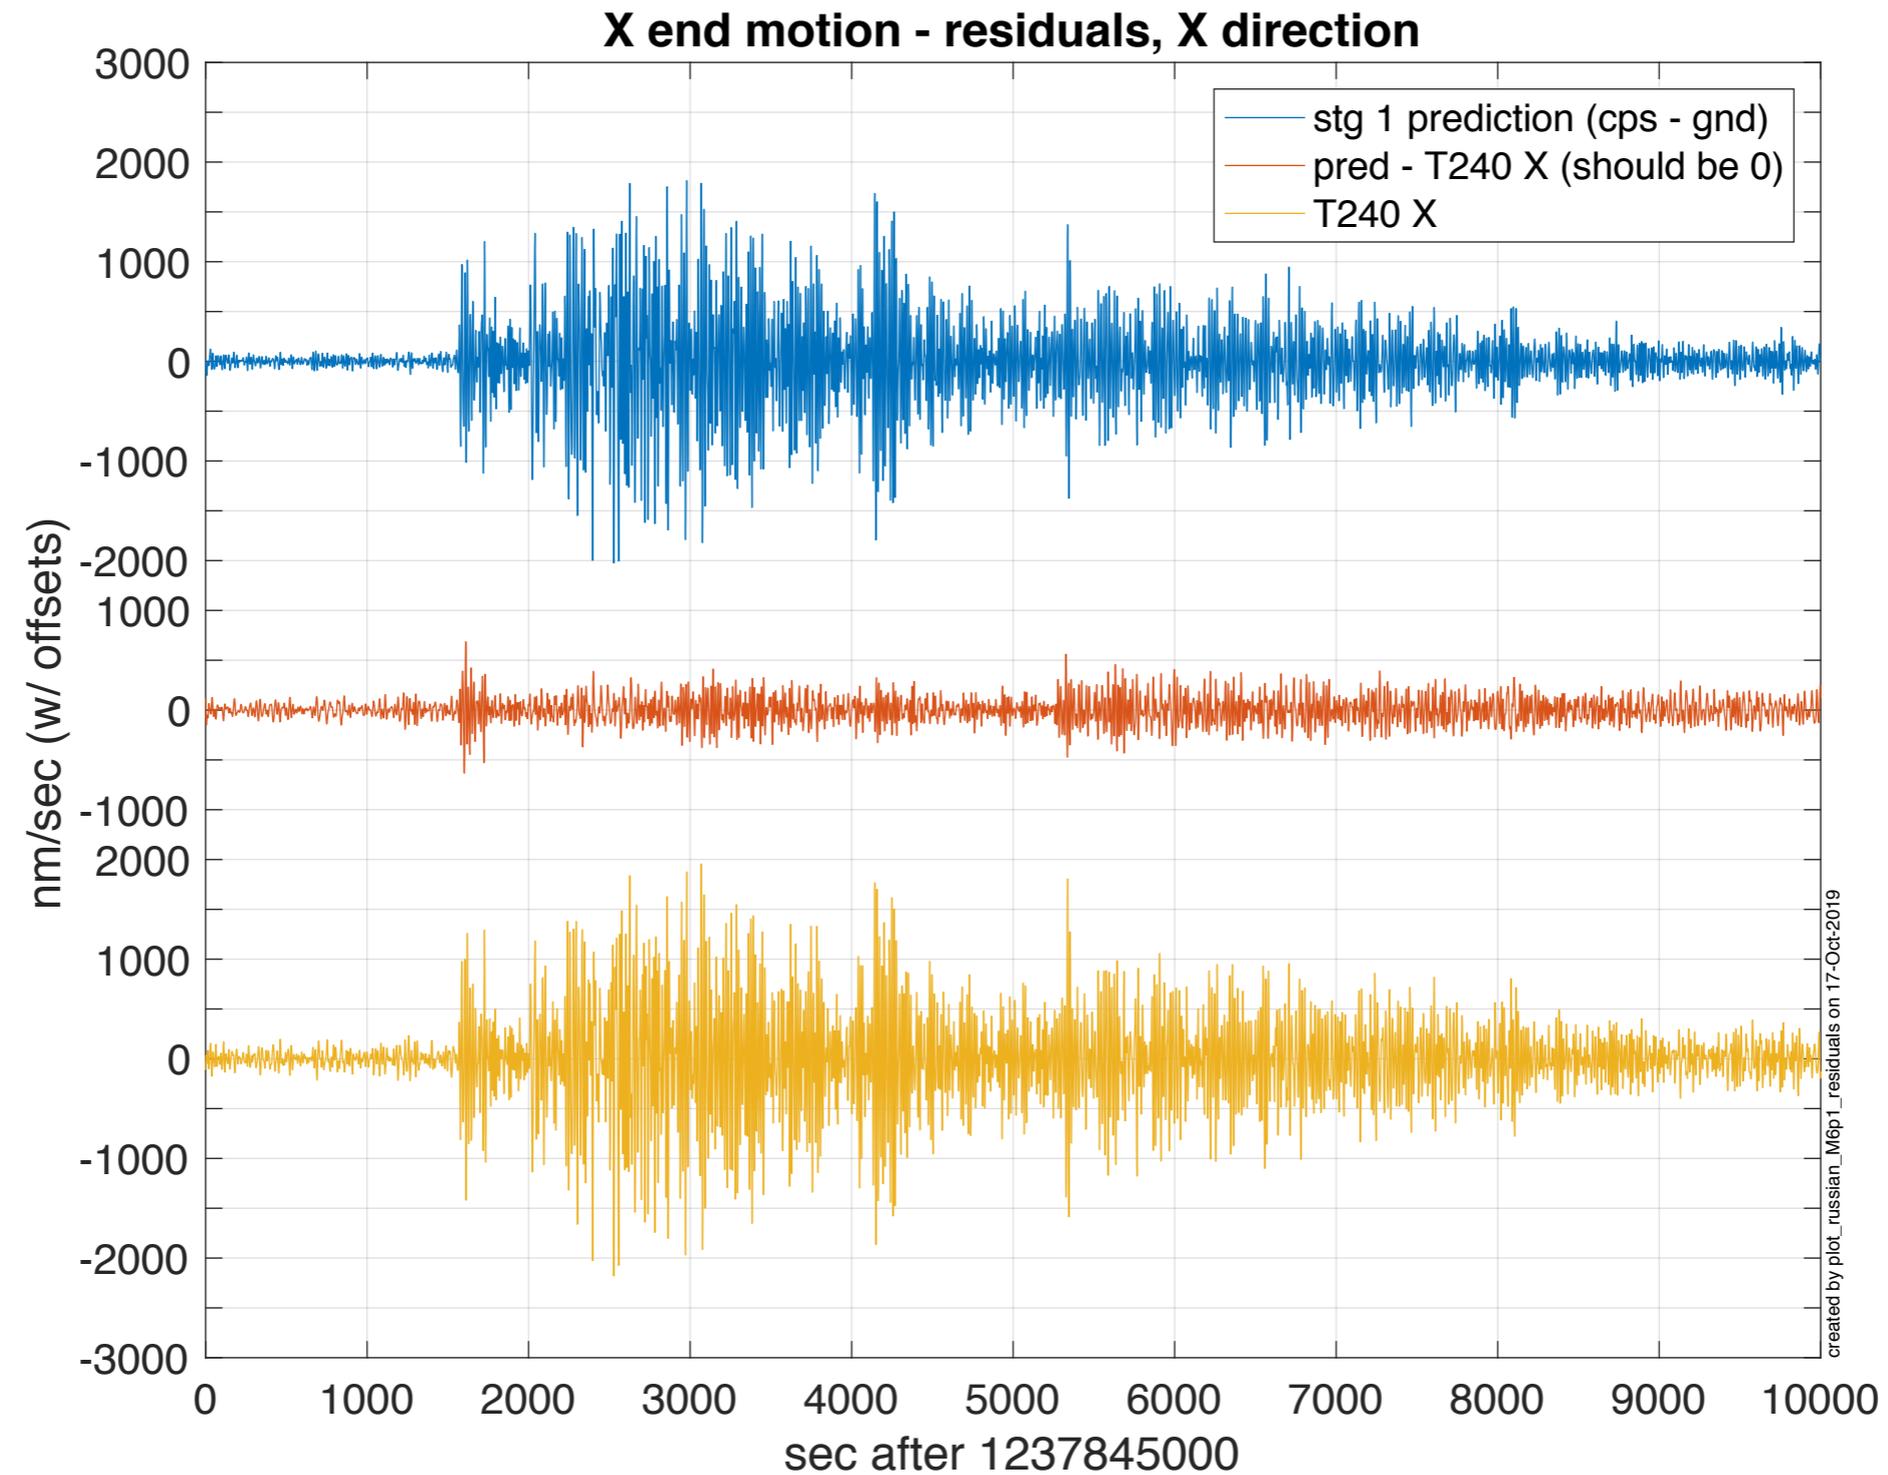

The motion isn't very coherent

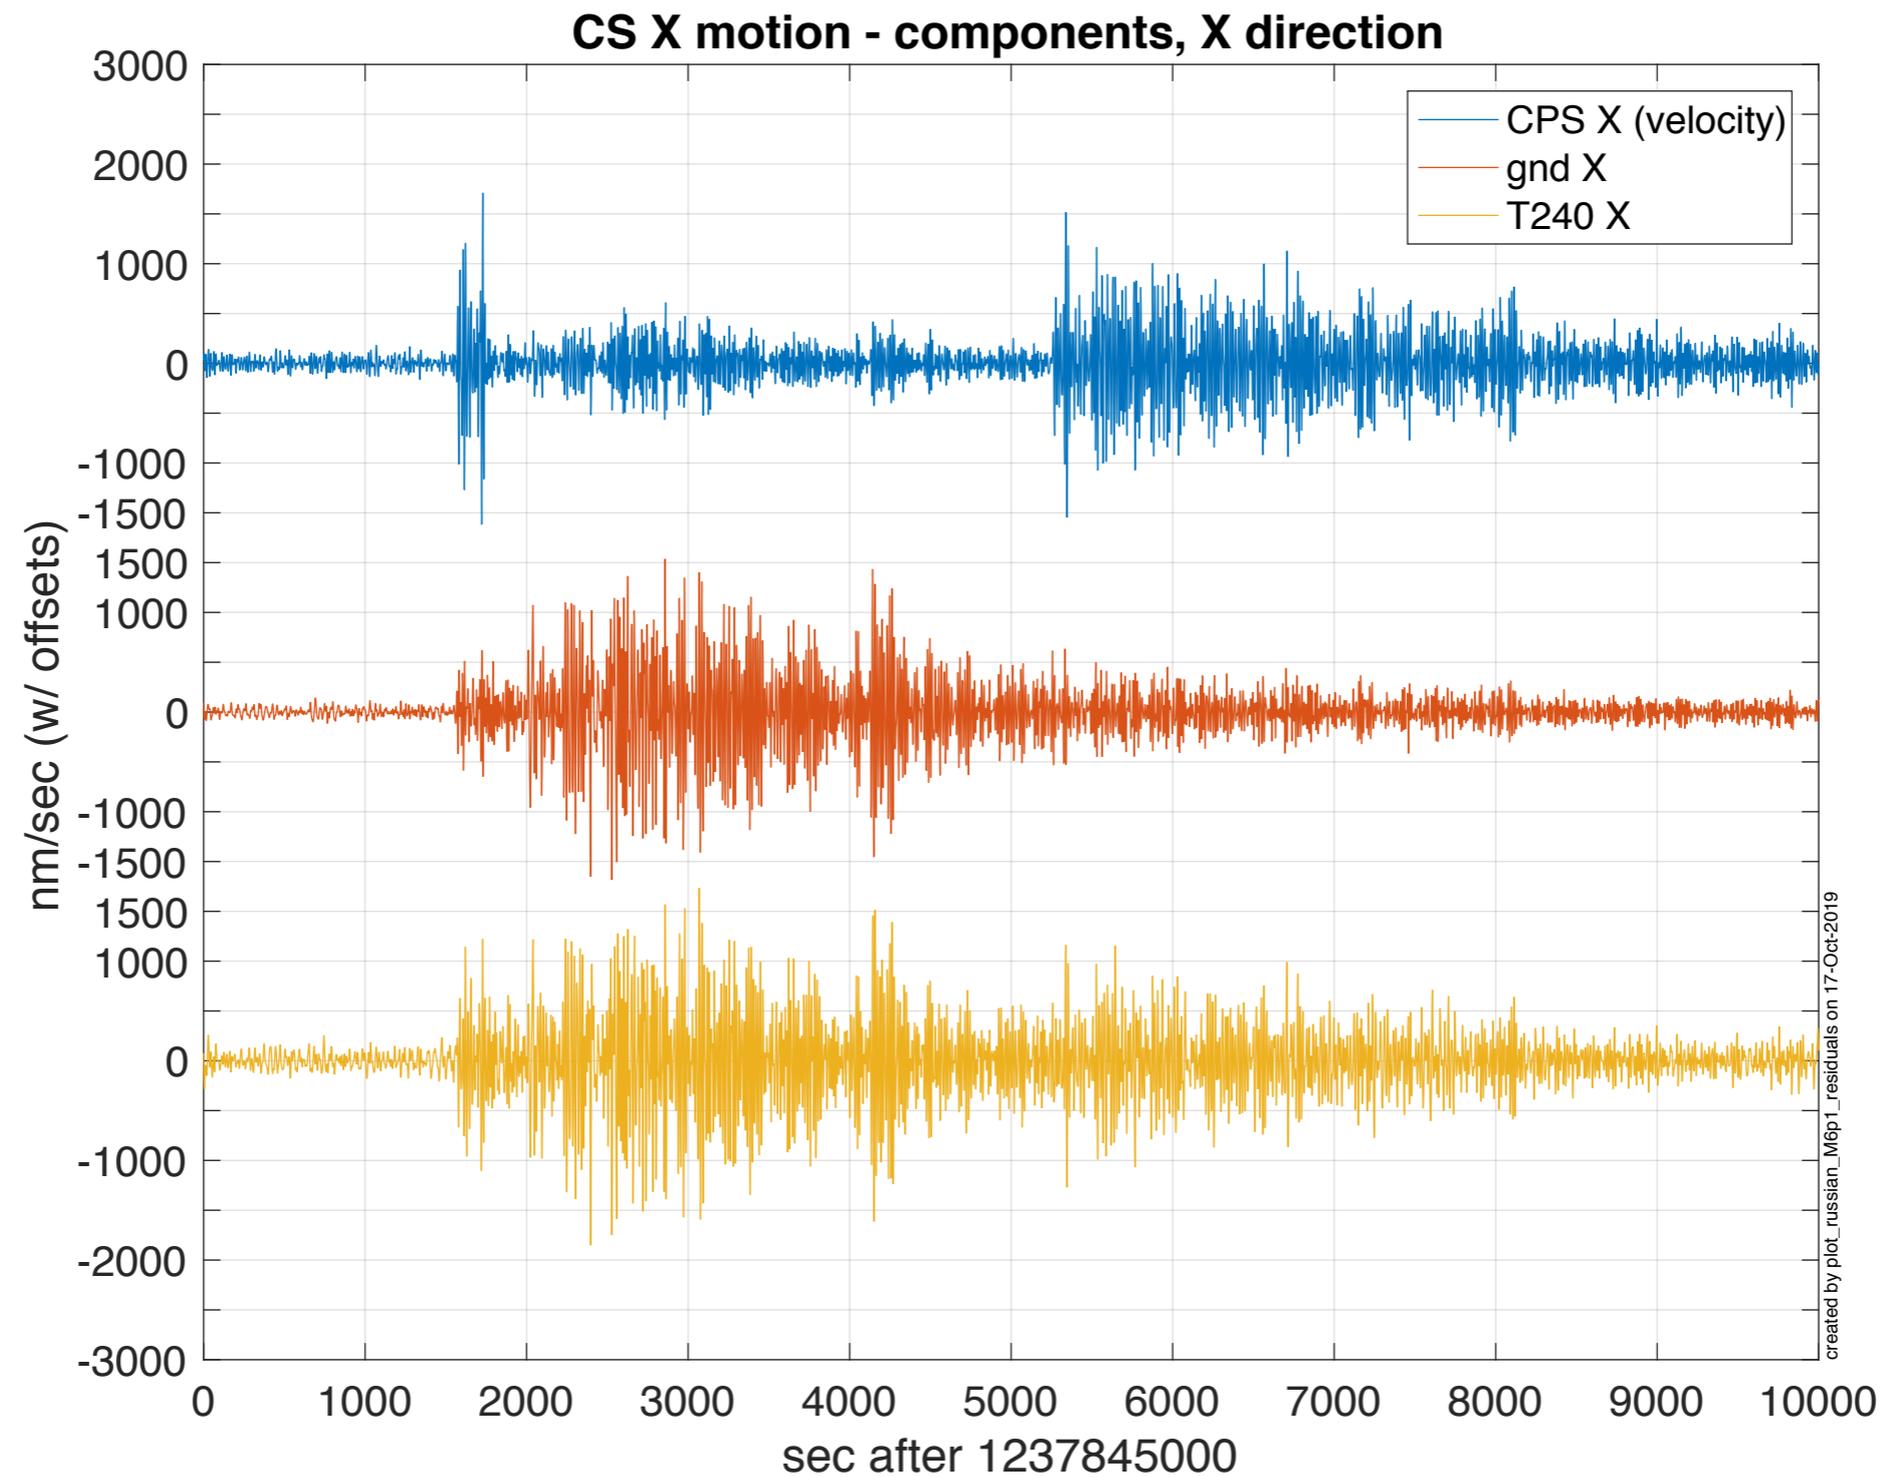

Excess motion on the tables (End-X)

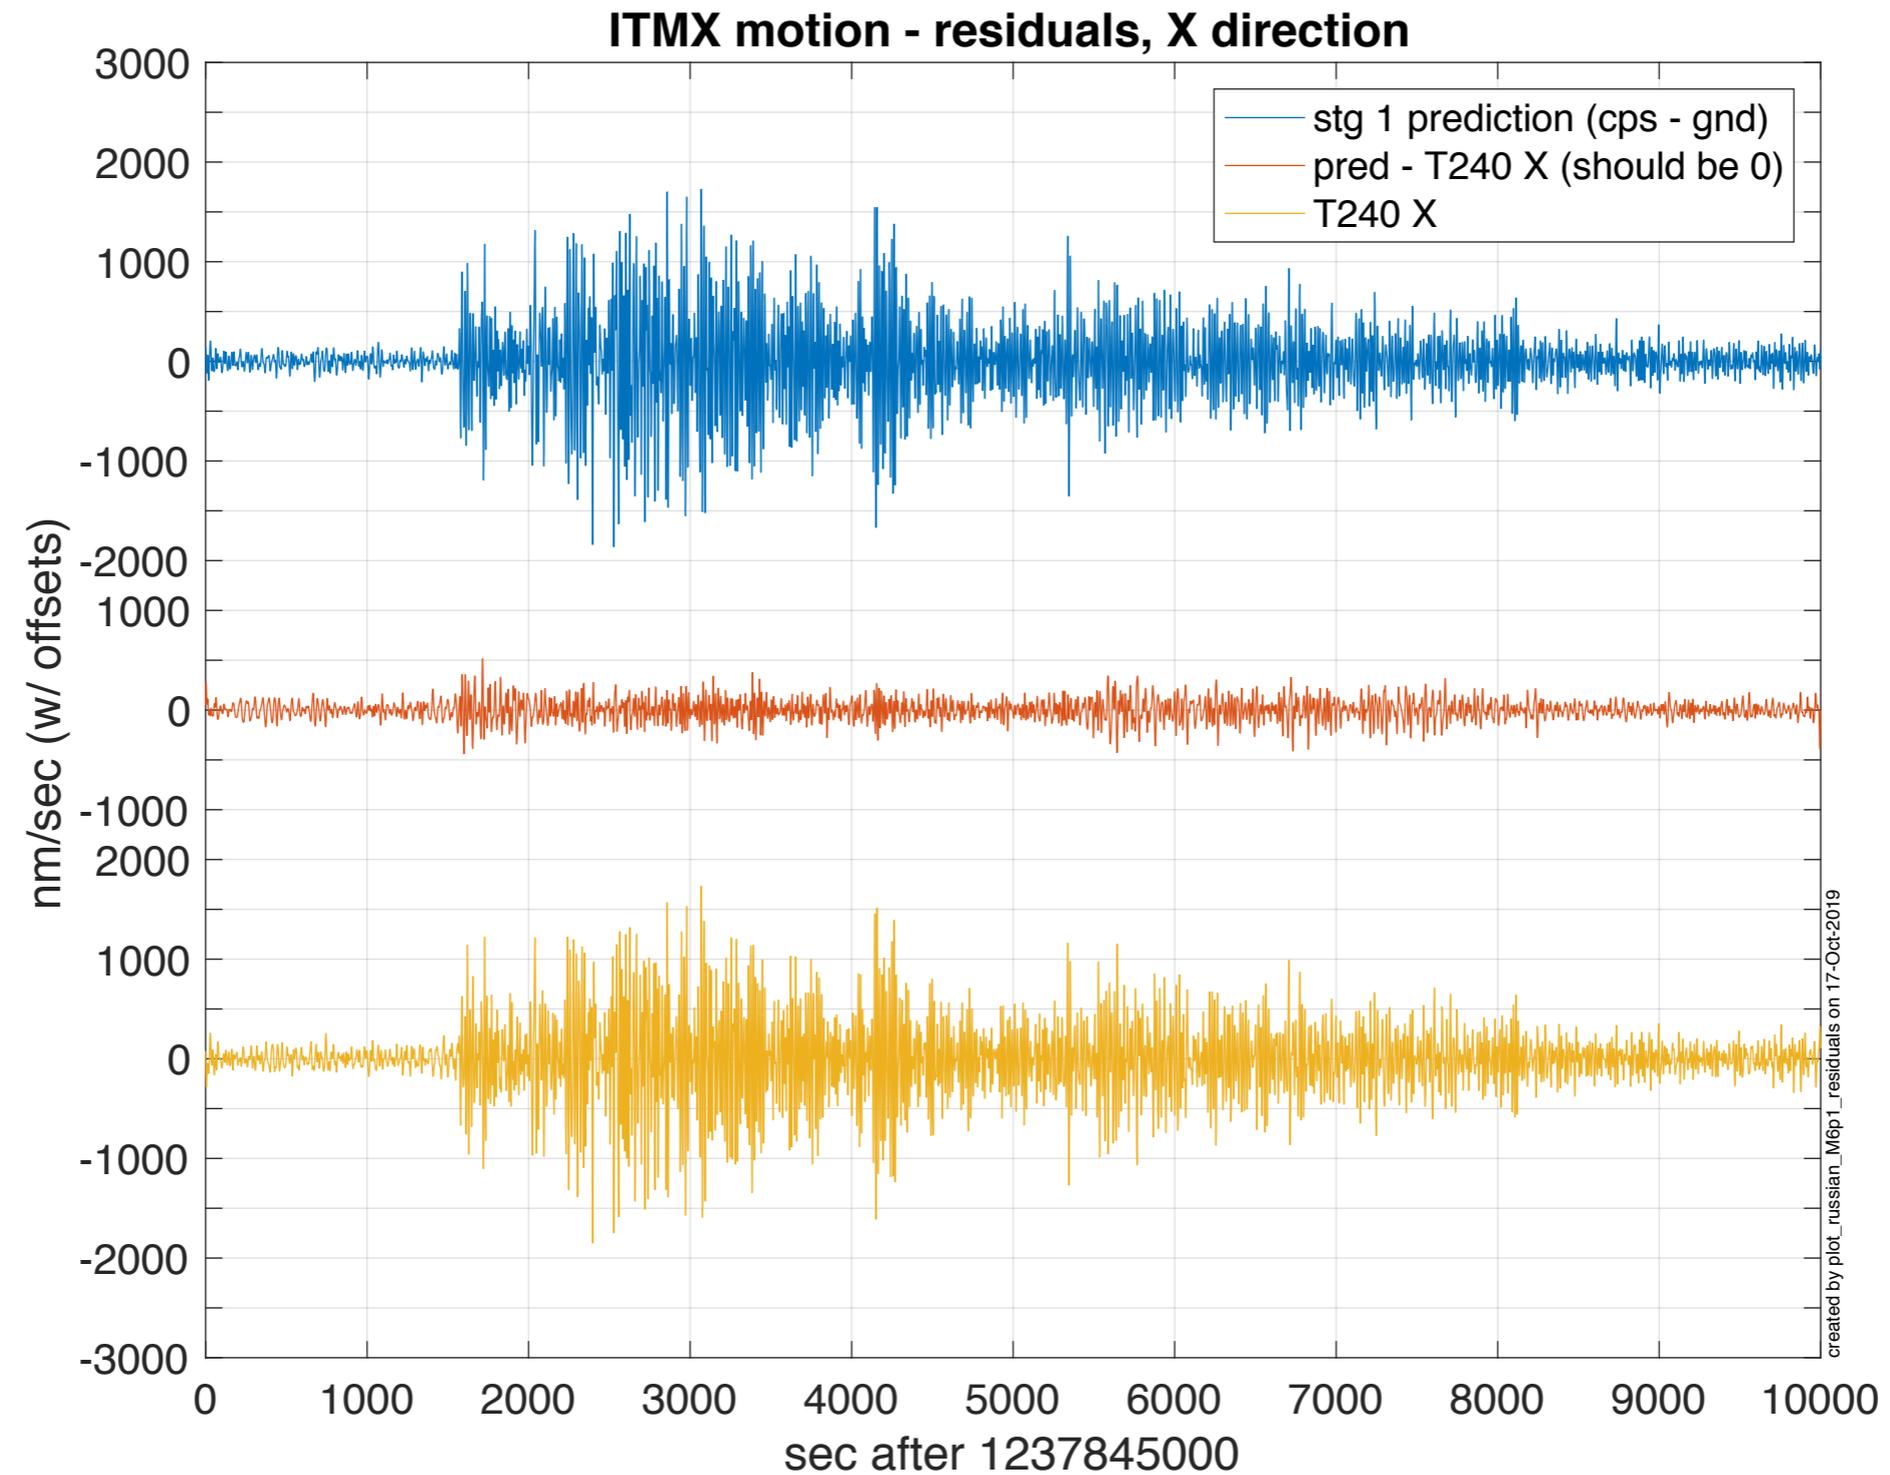

Excess motion on the tables (End-X)

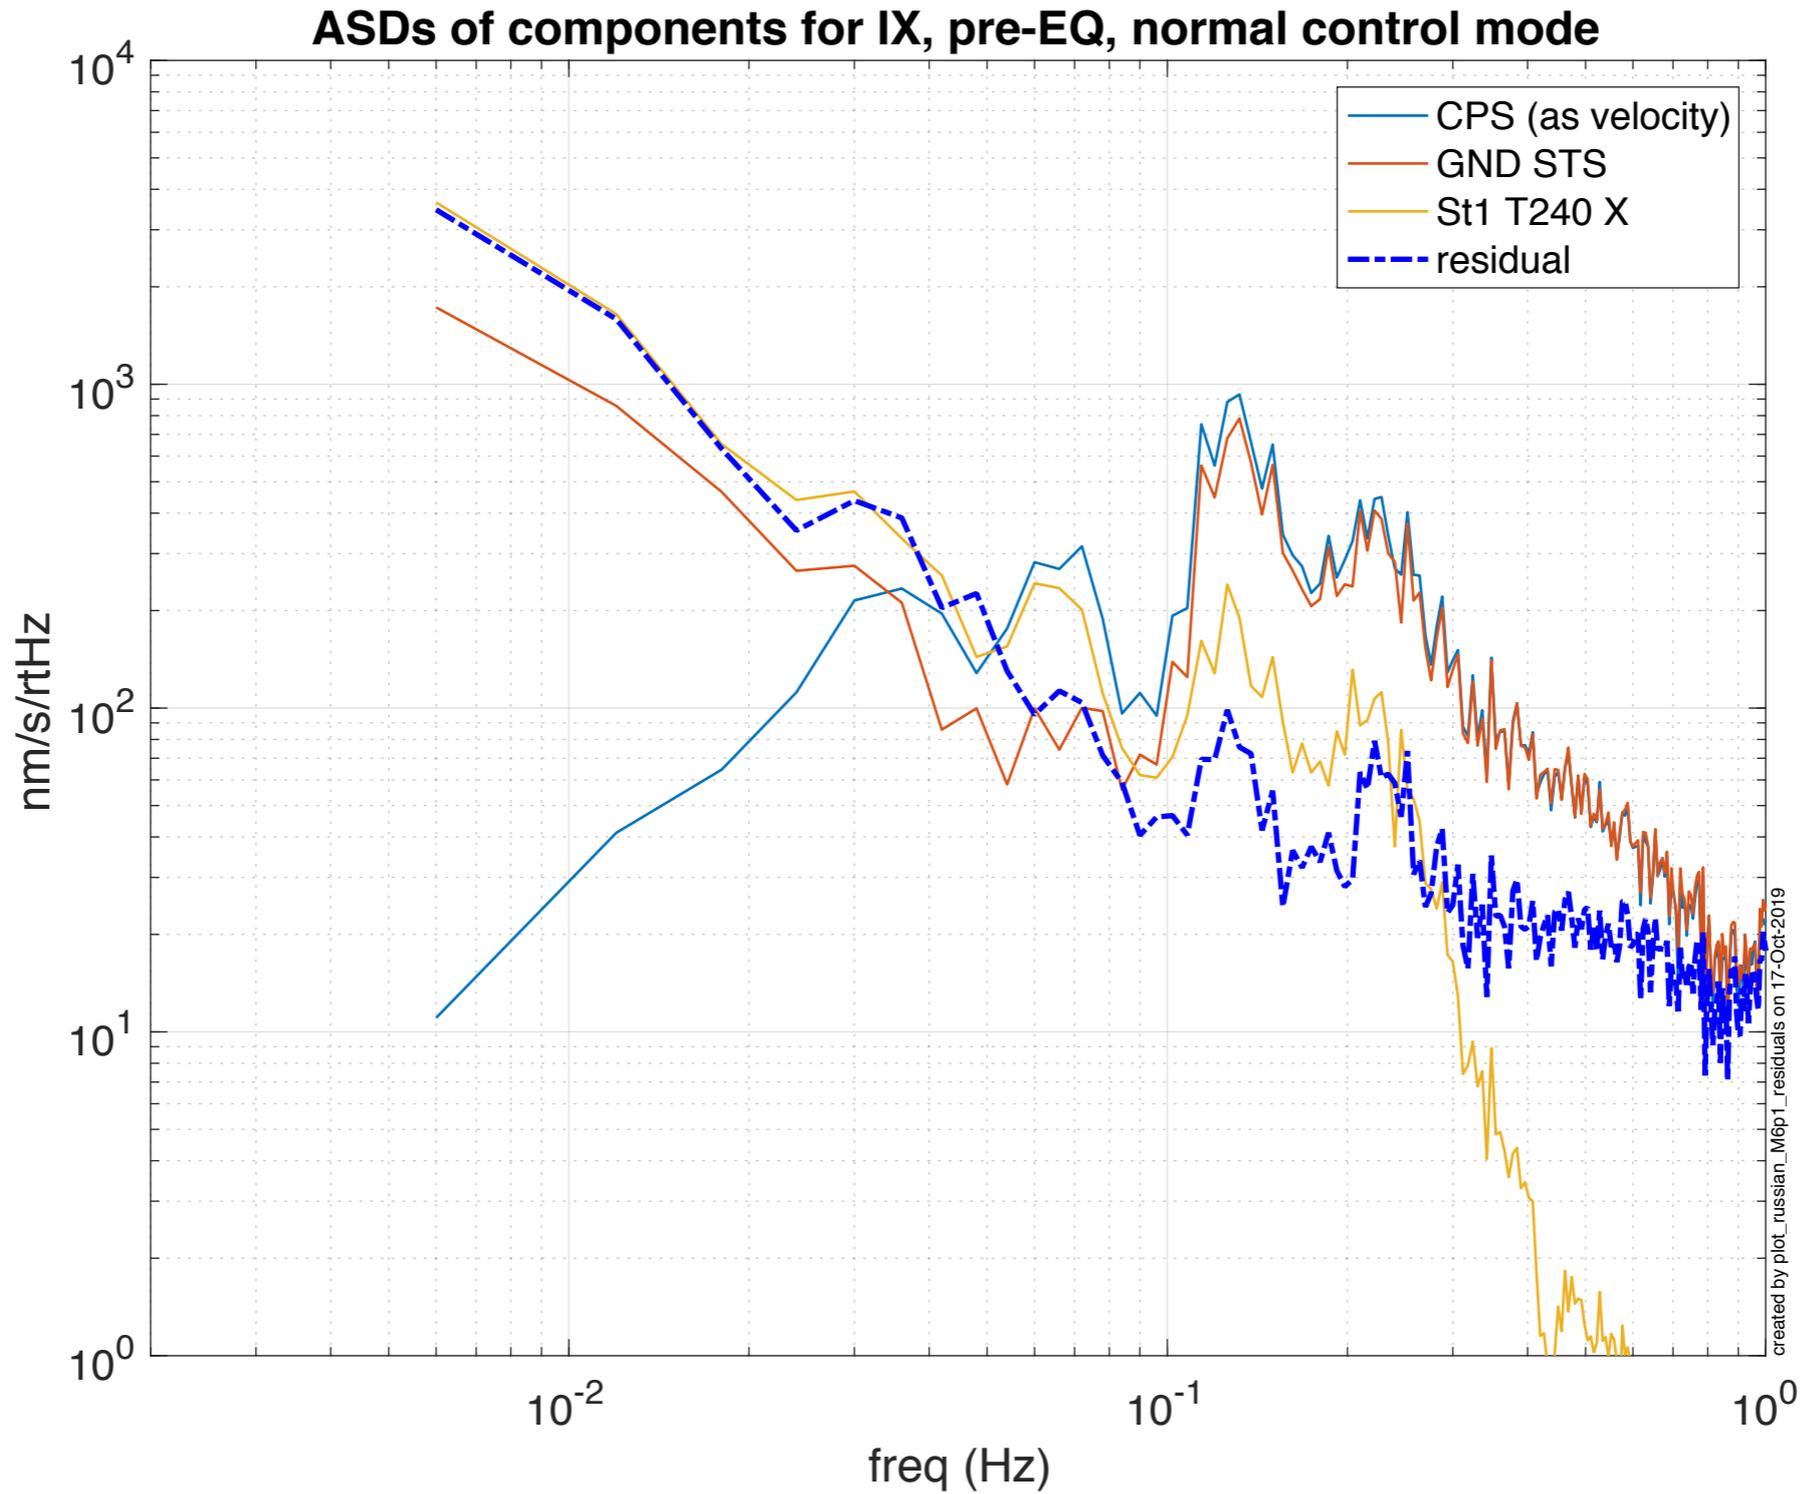

Excess motion on the tables (In-X)

Excess motion on the tables (In-X)

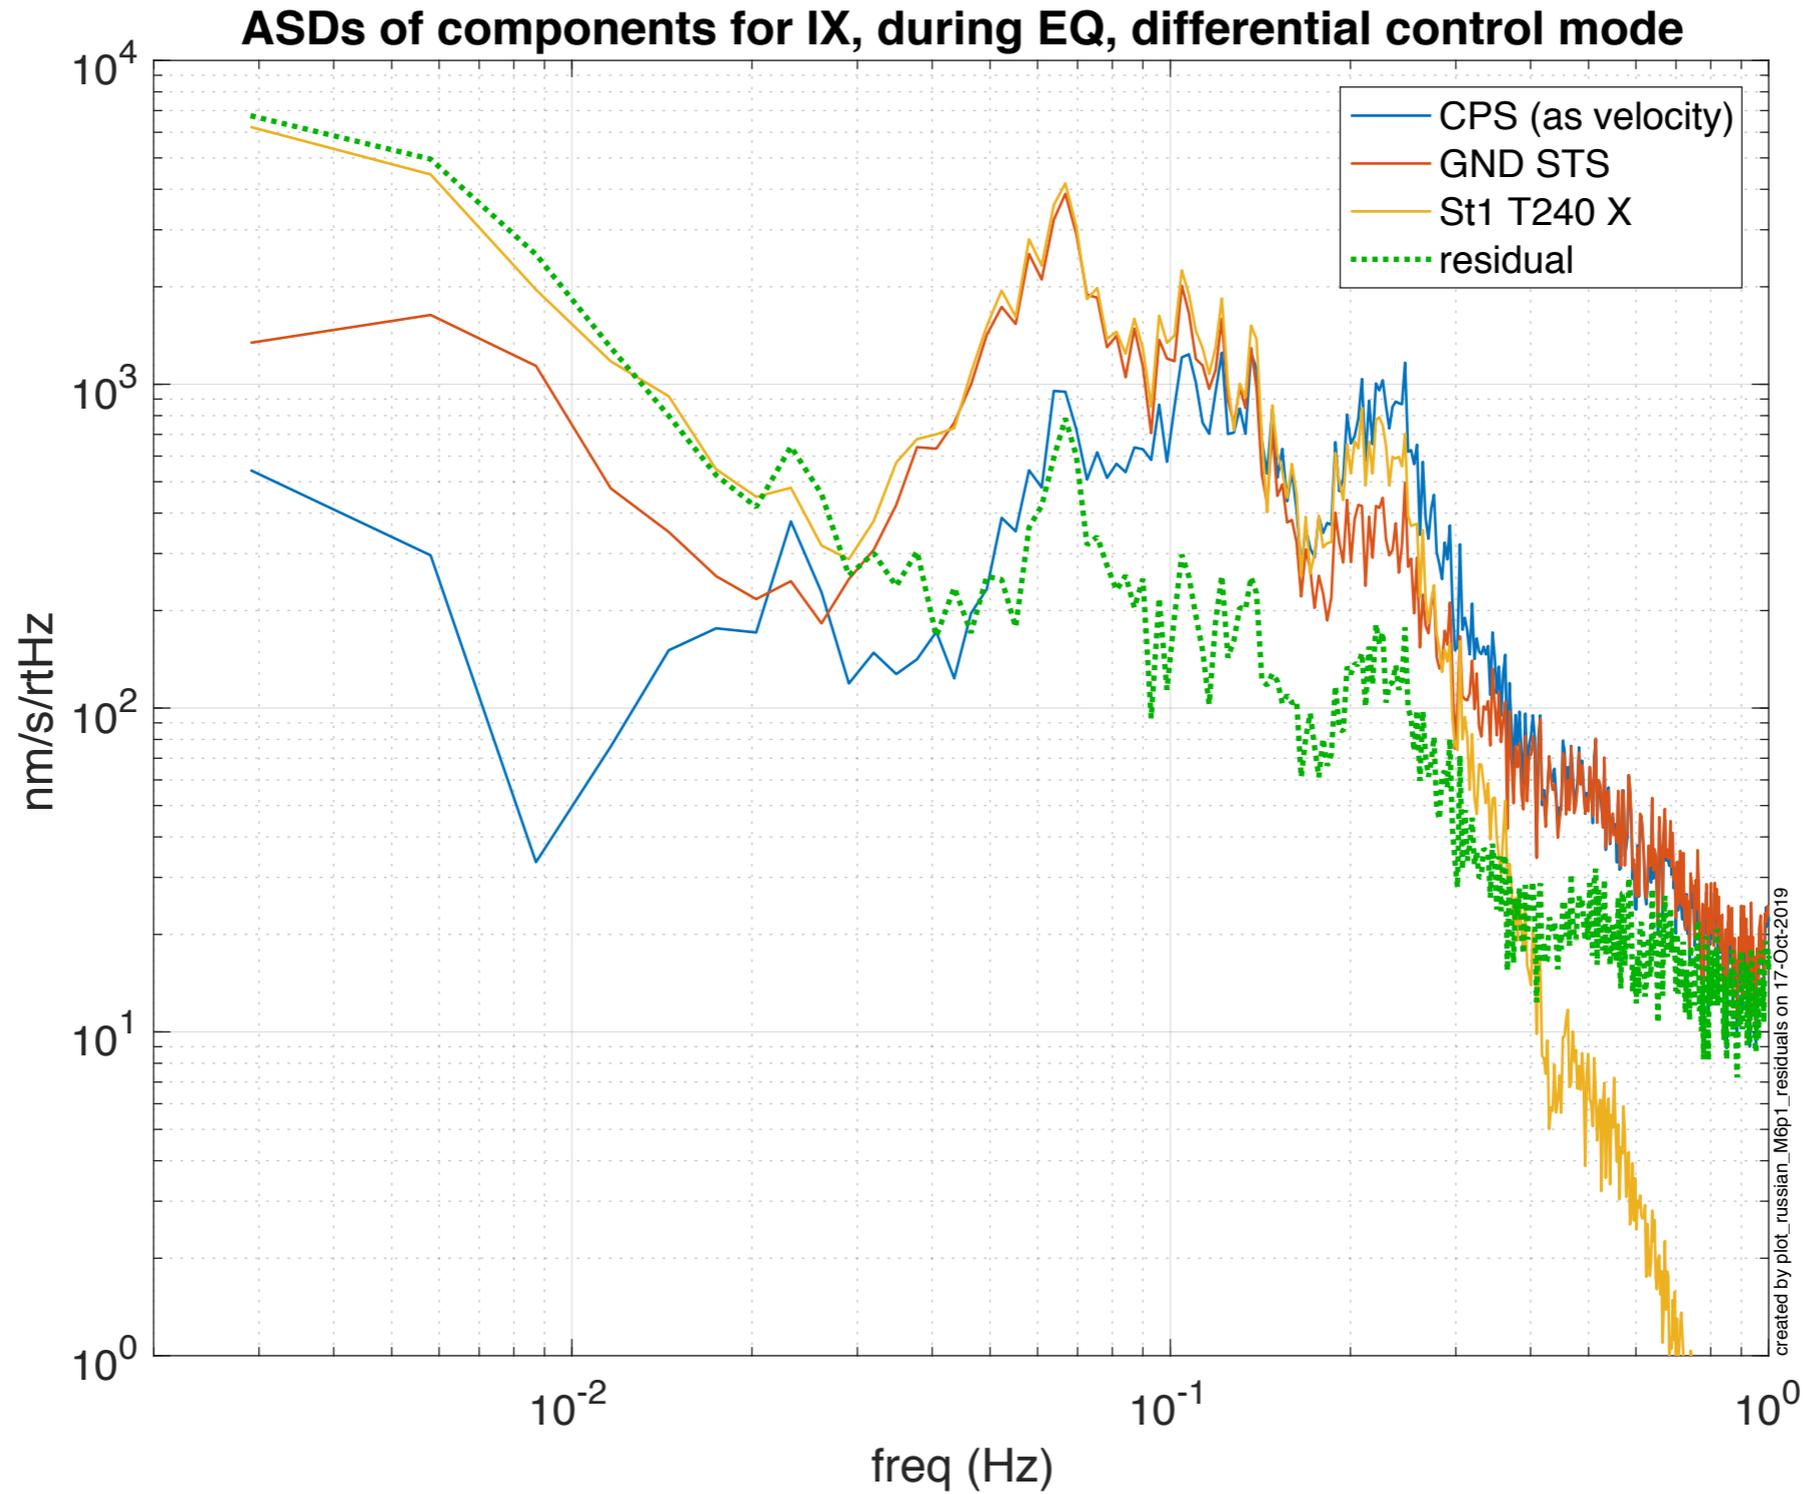

Plot residuals (In-X)

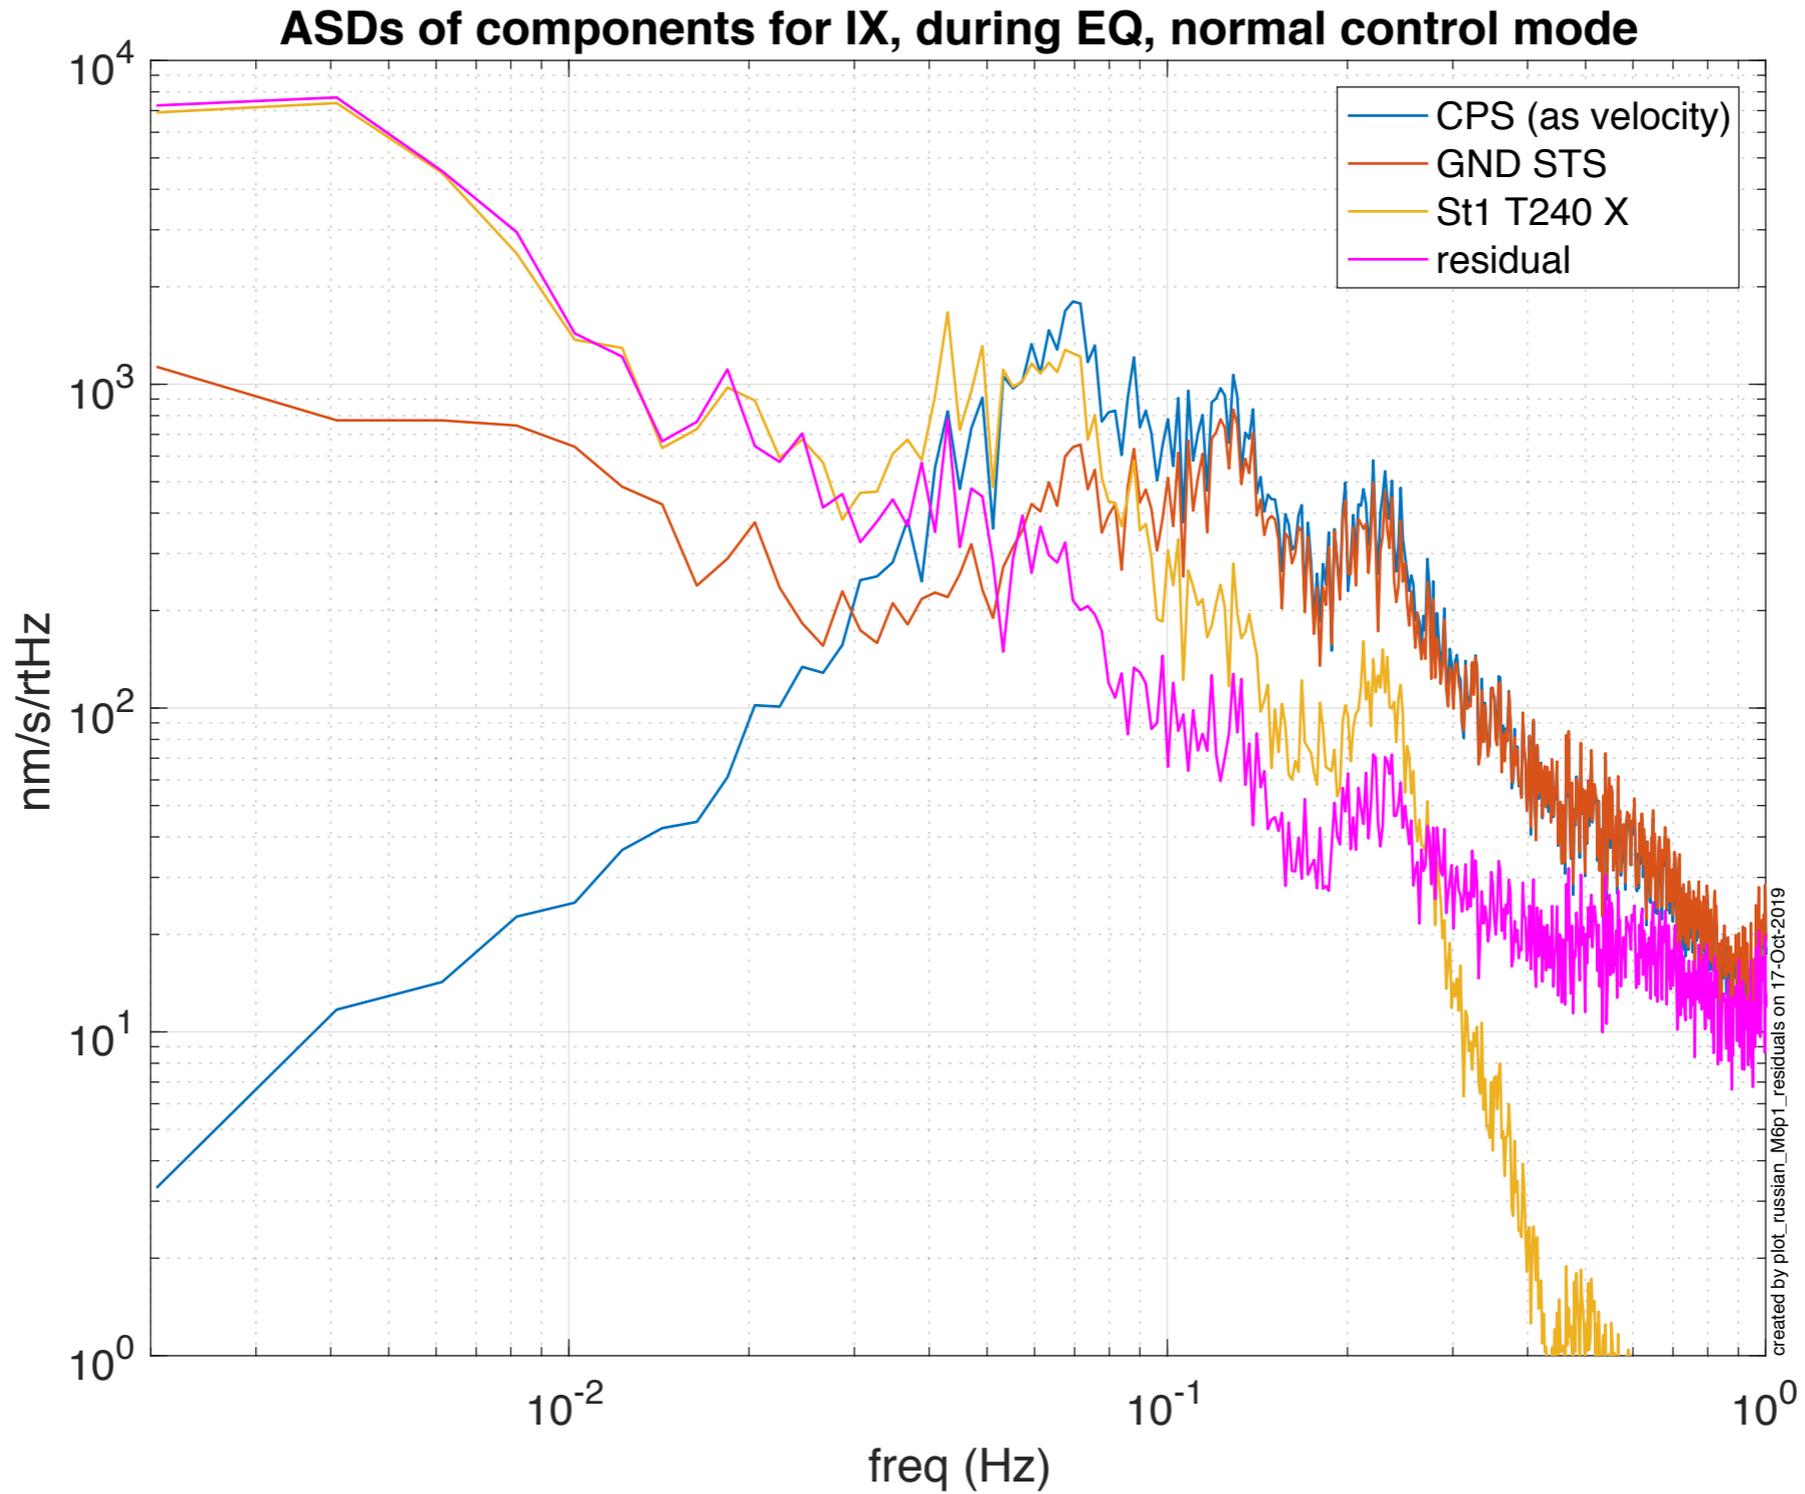

I don't see a clear pattern in these, maybe you can?

Plot residuals (In-X)

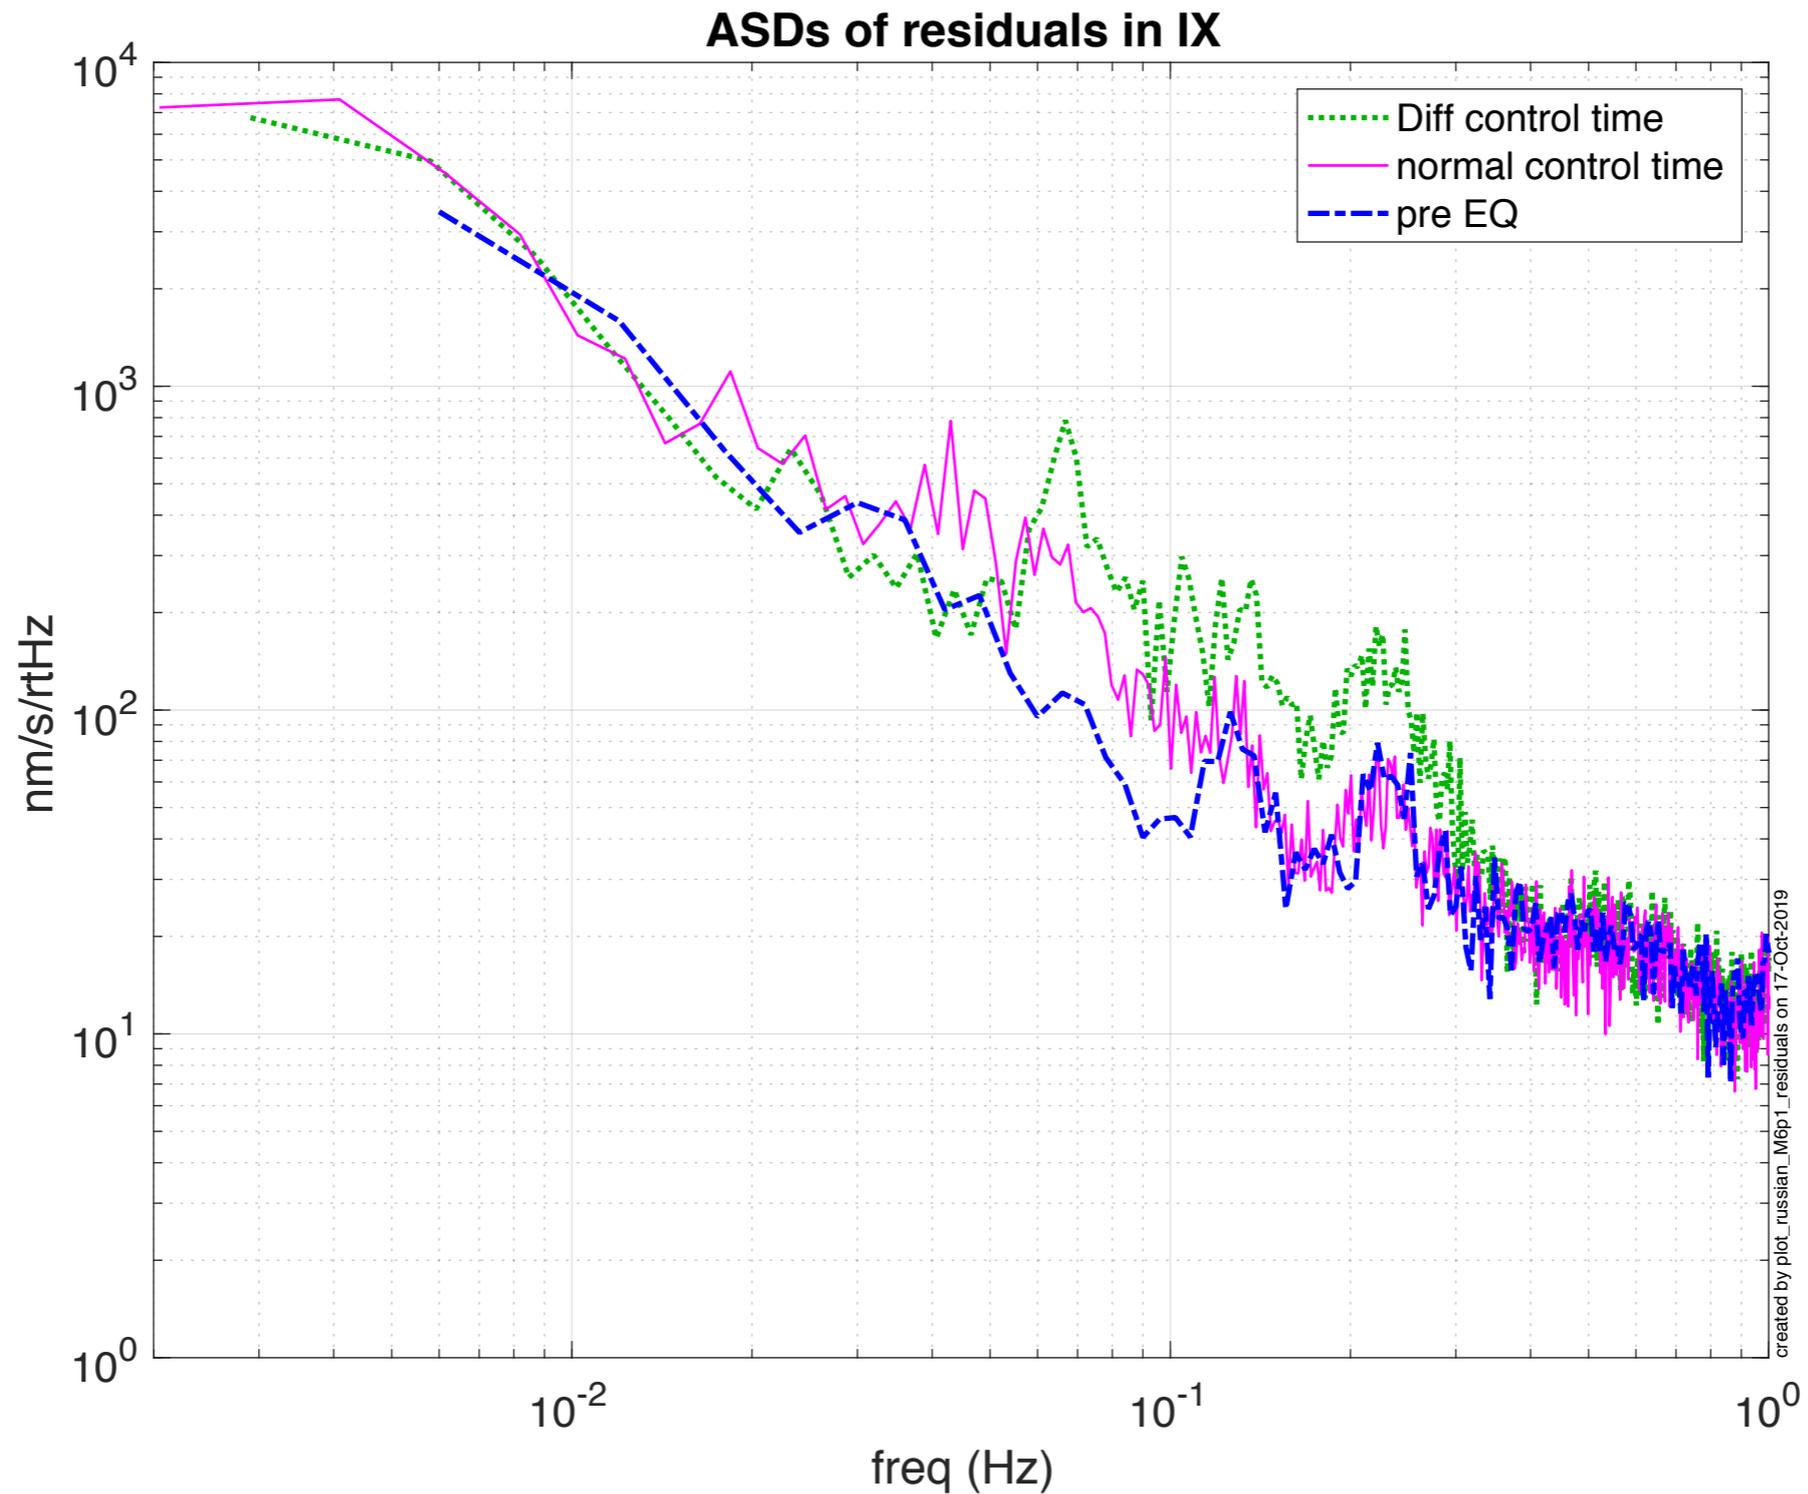

I don't see a clear pattern in these, maybe you can?

Plot residuals (In-X)

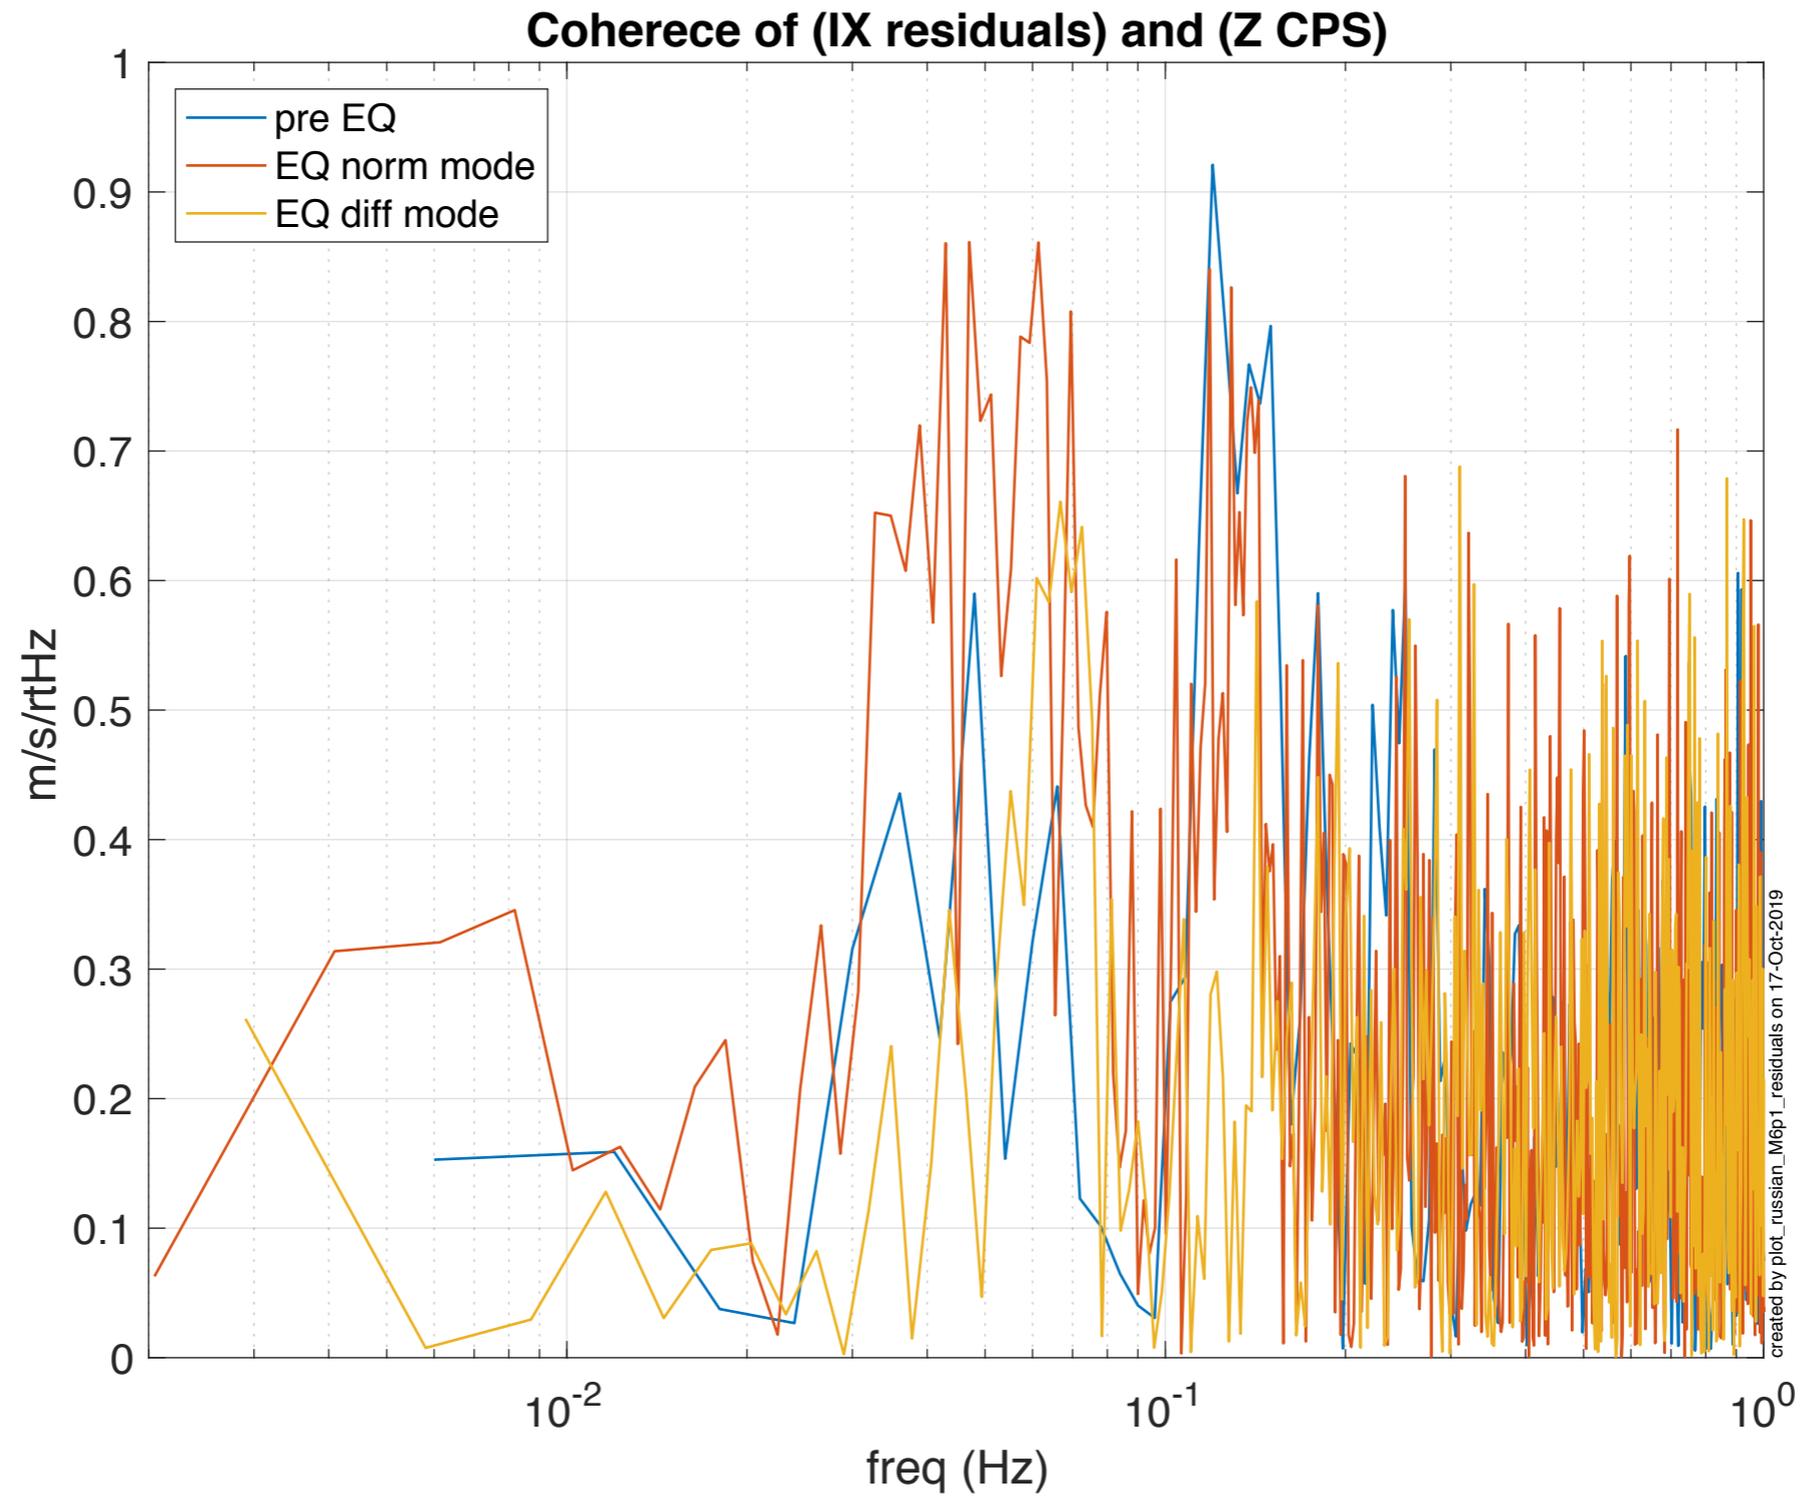

I don't see a clear pattern in these, maybe you can?

compare residuals (In-X)

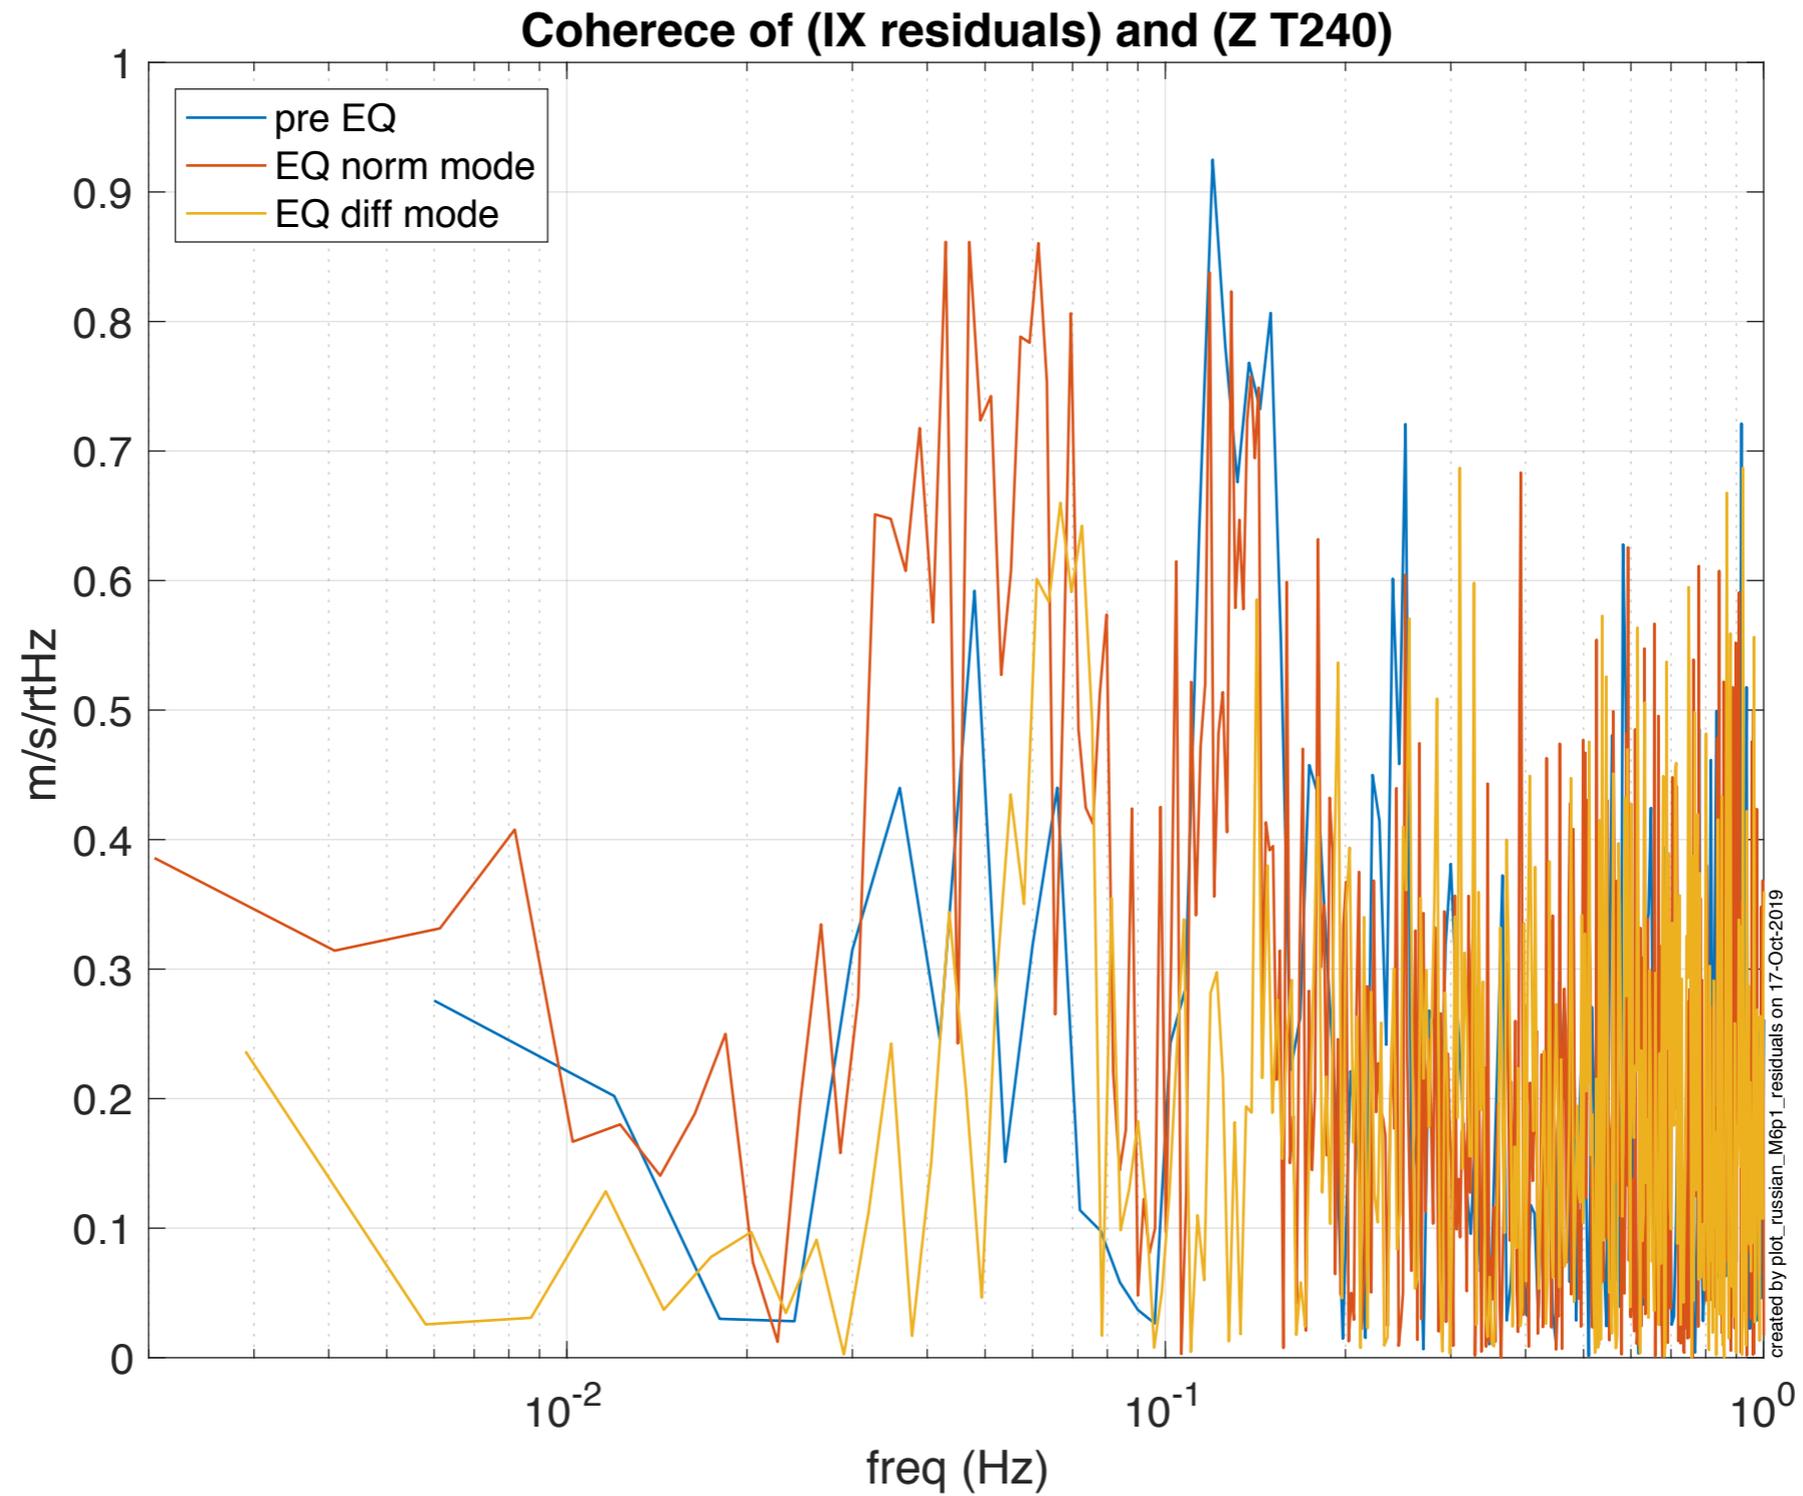

I don't see a clear pattern in these, maybe you can?

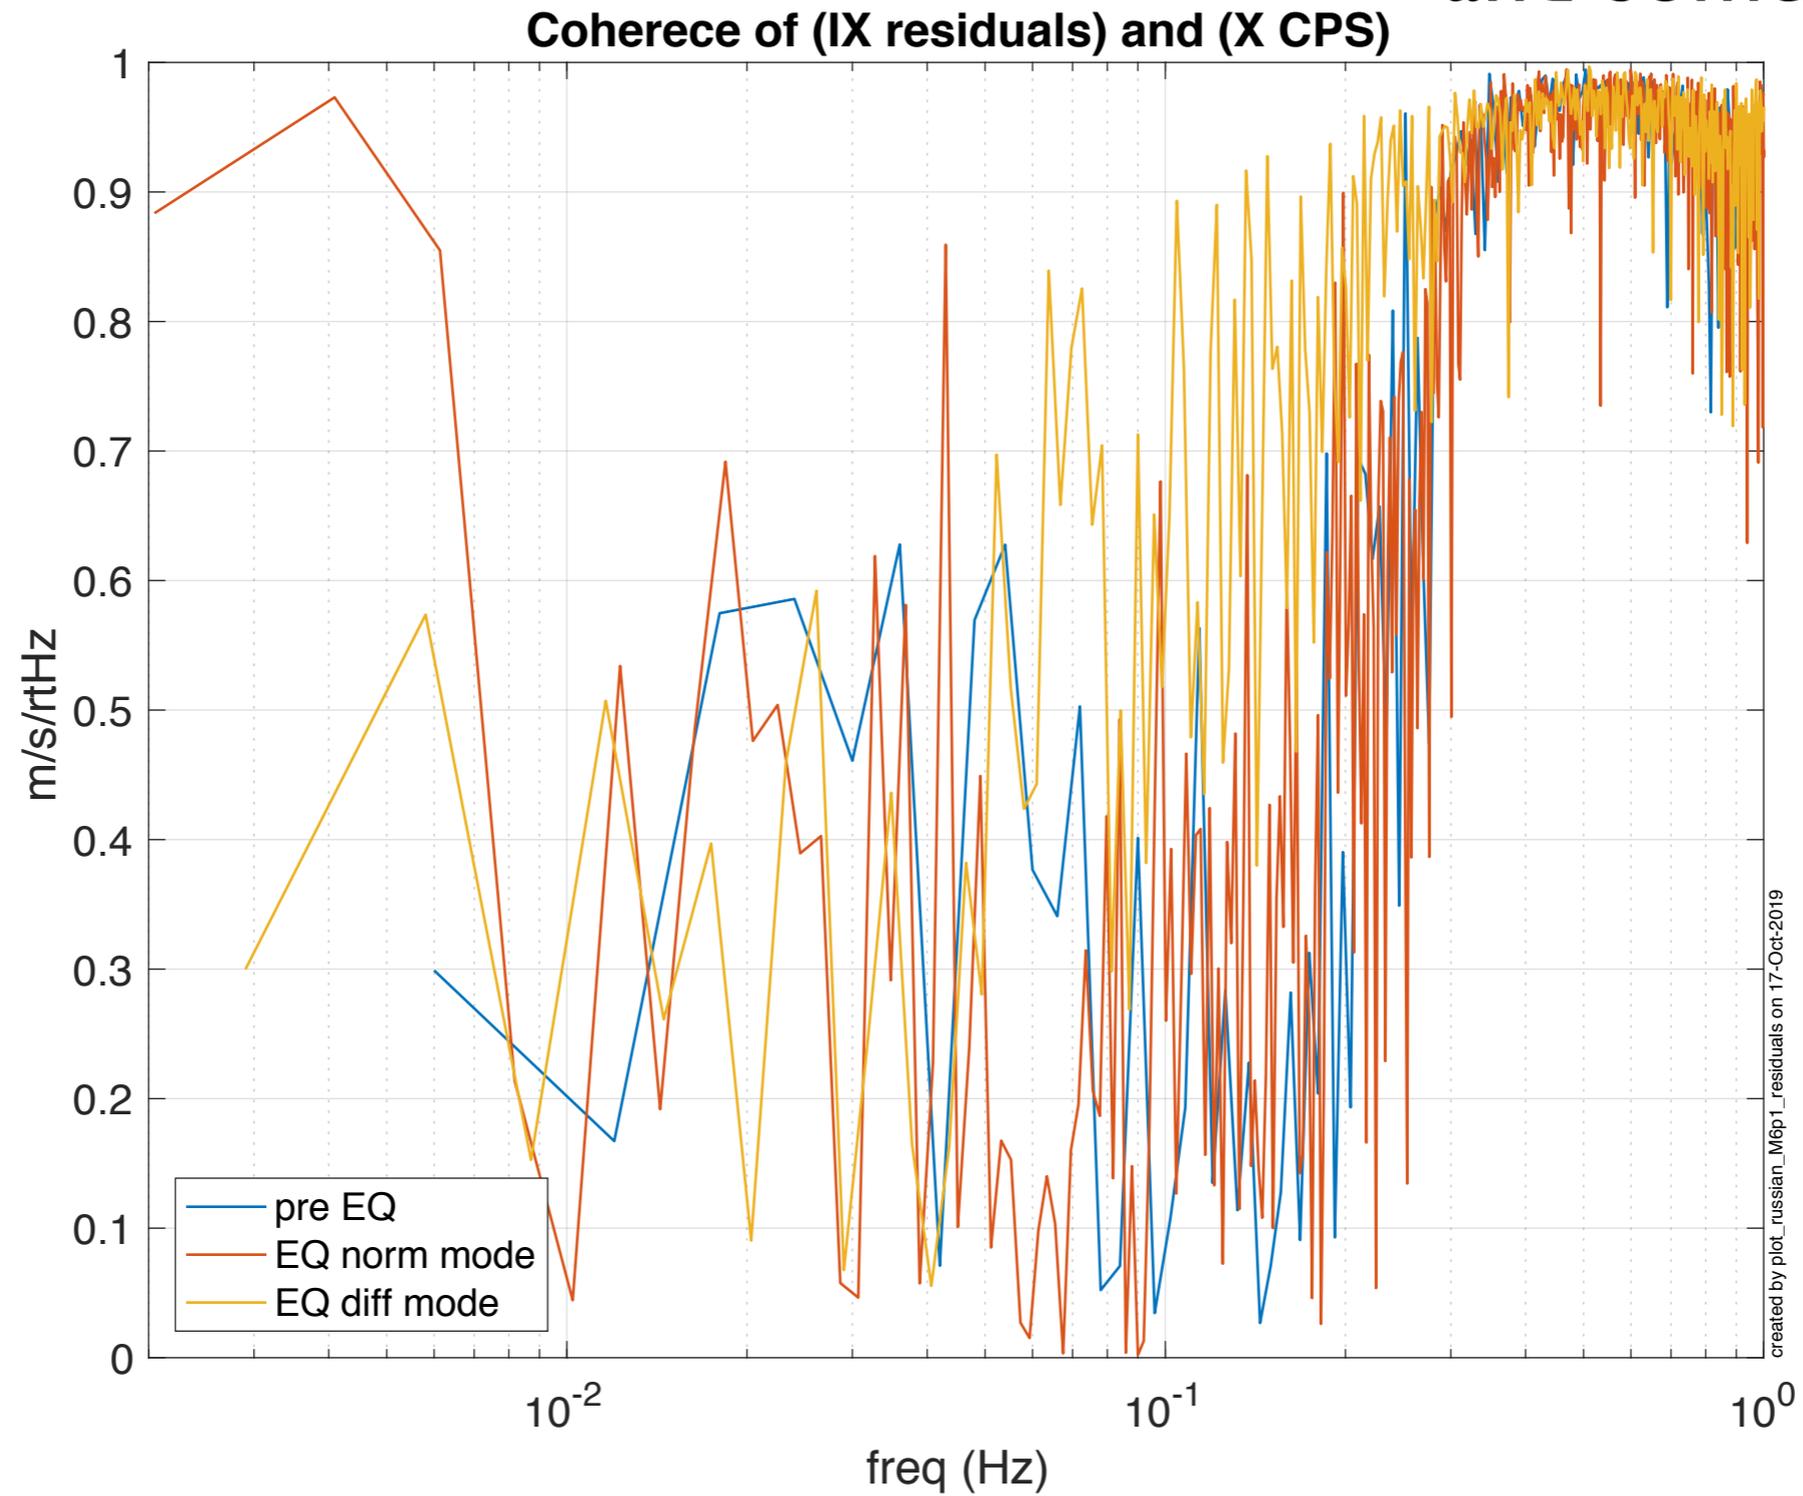

the residual is coh. w/ Z motion

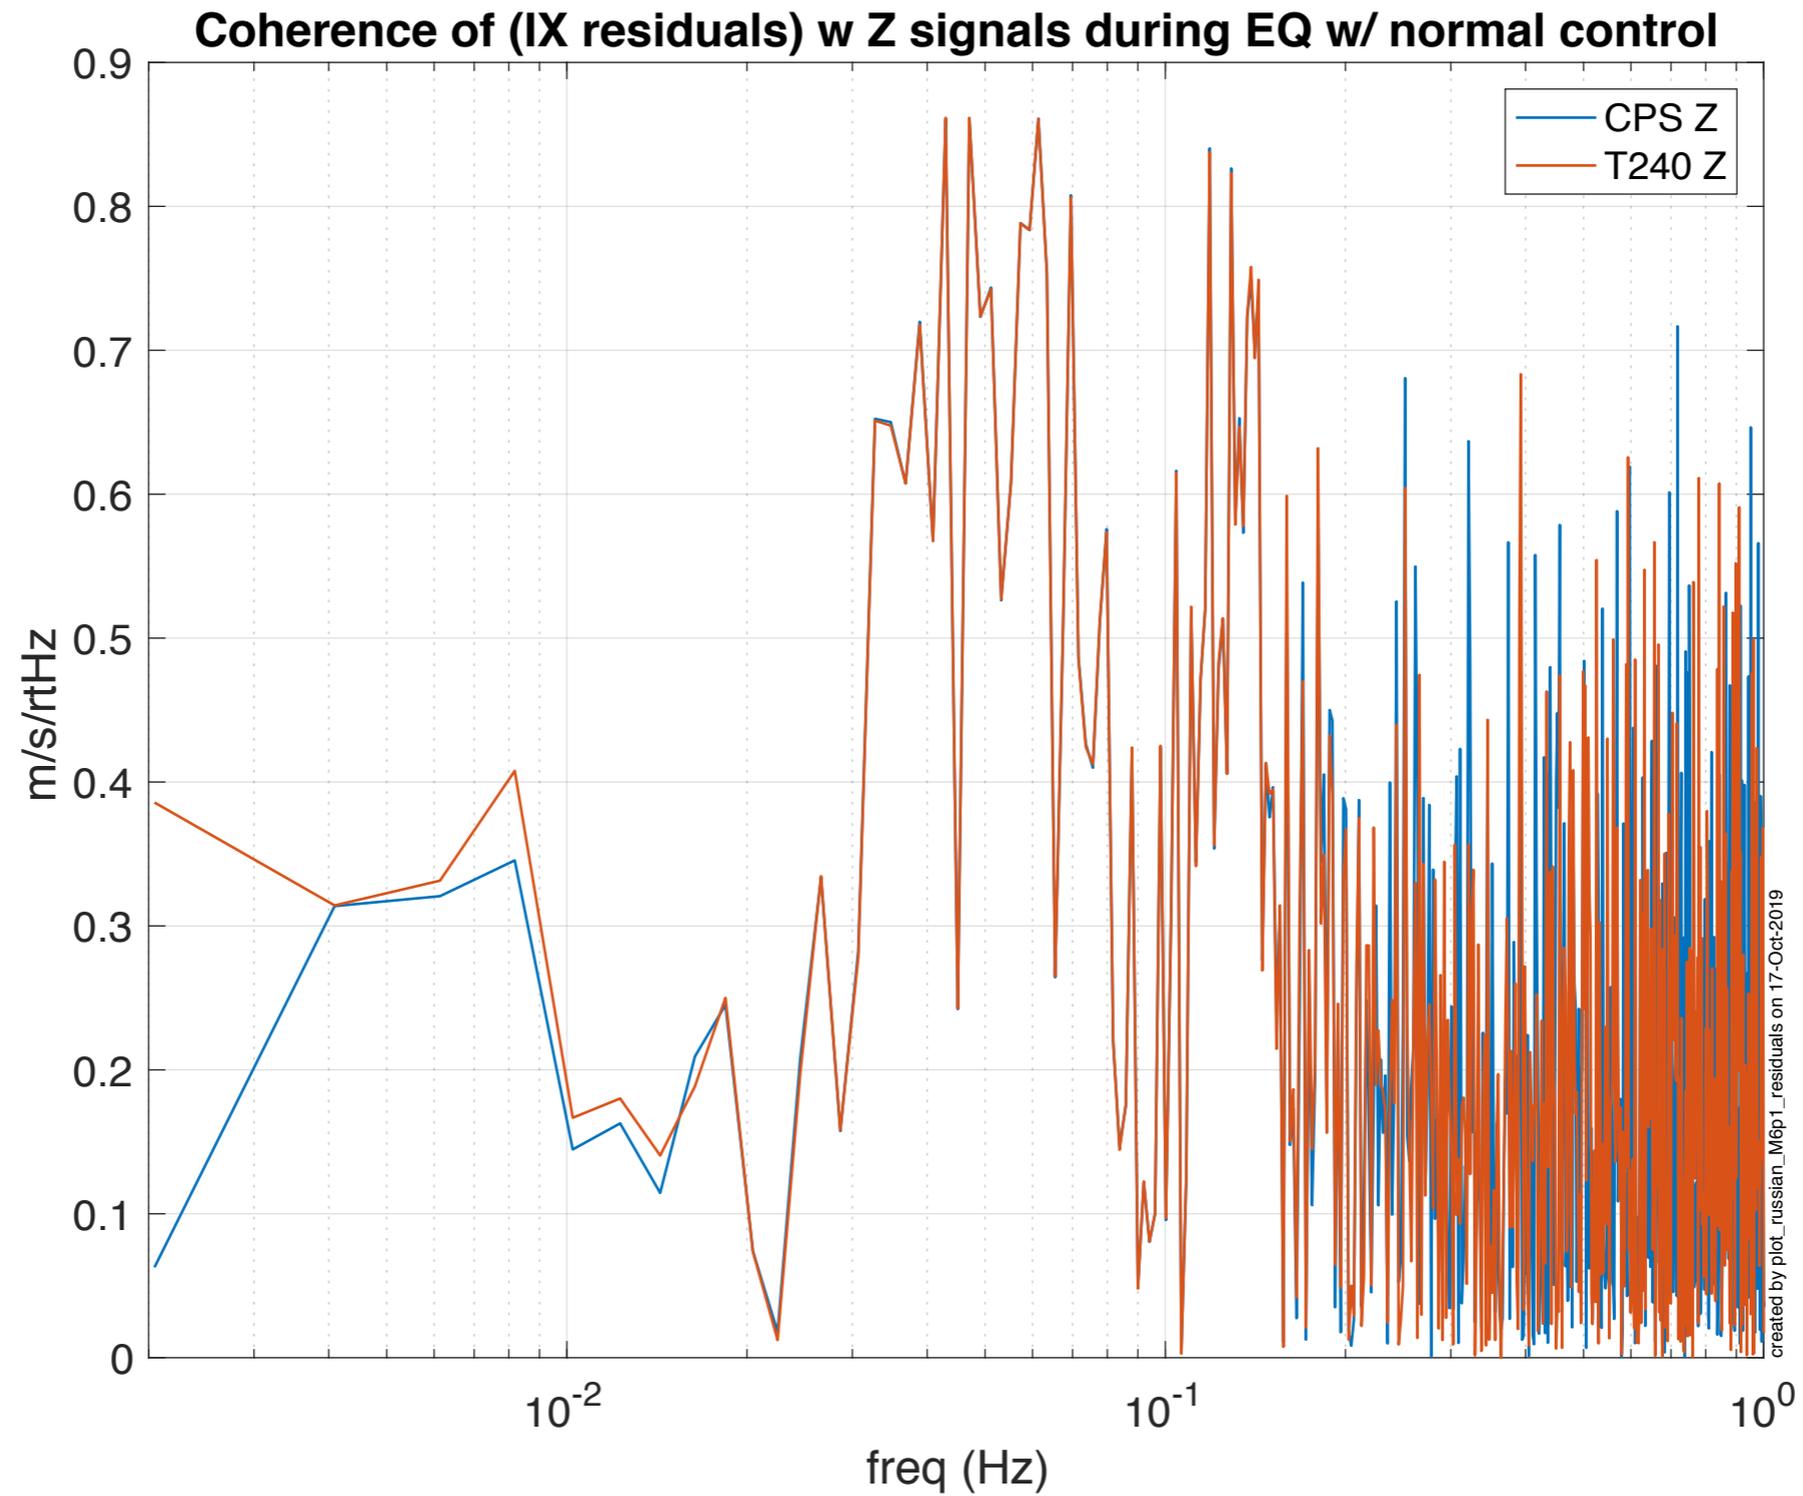

the residual is coh. w/ Z motion

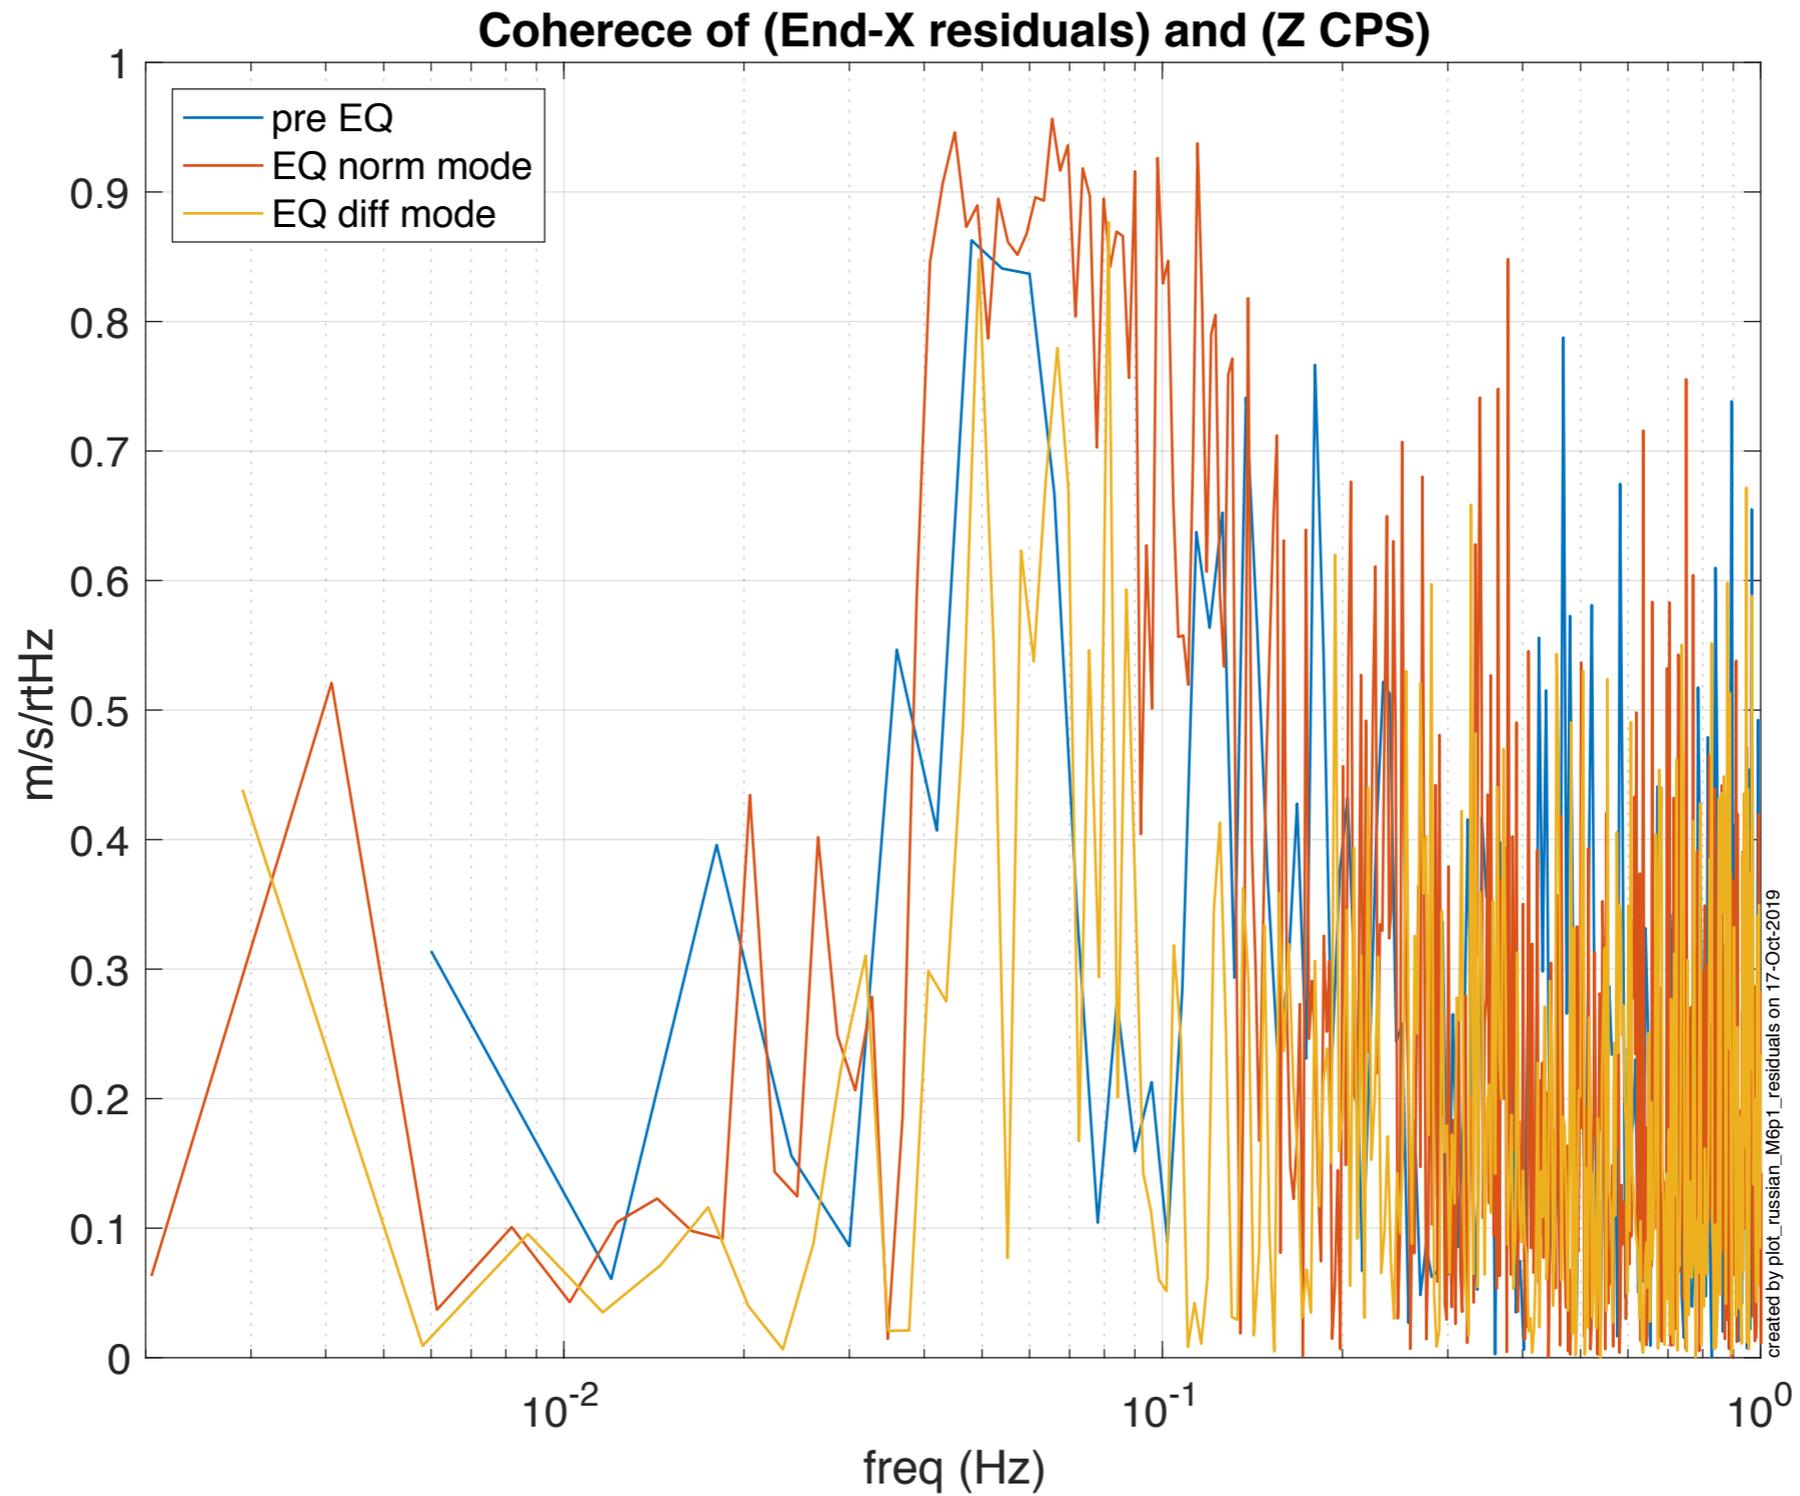

the residual is coh. w/ Z motion and some w/ X

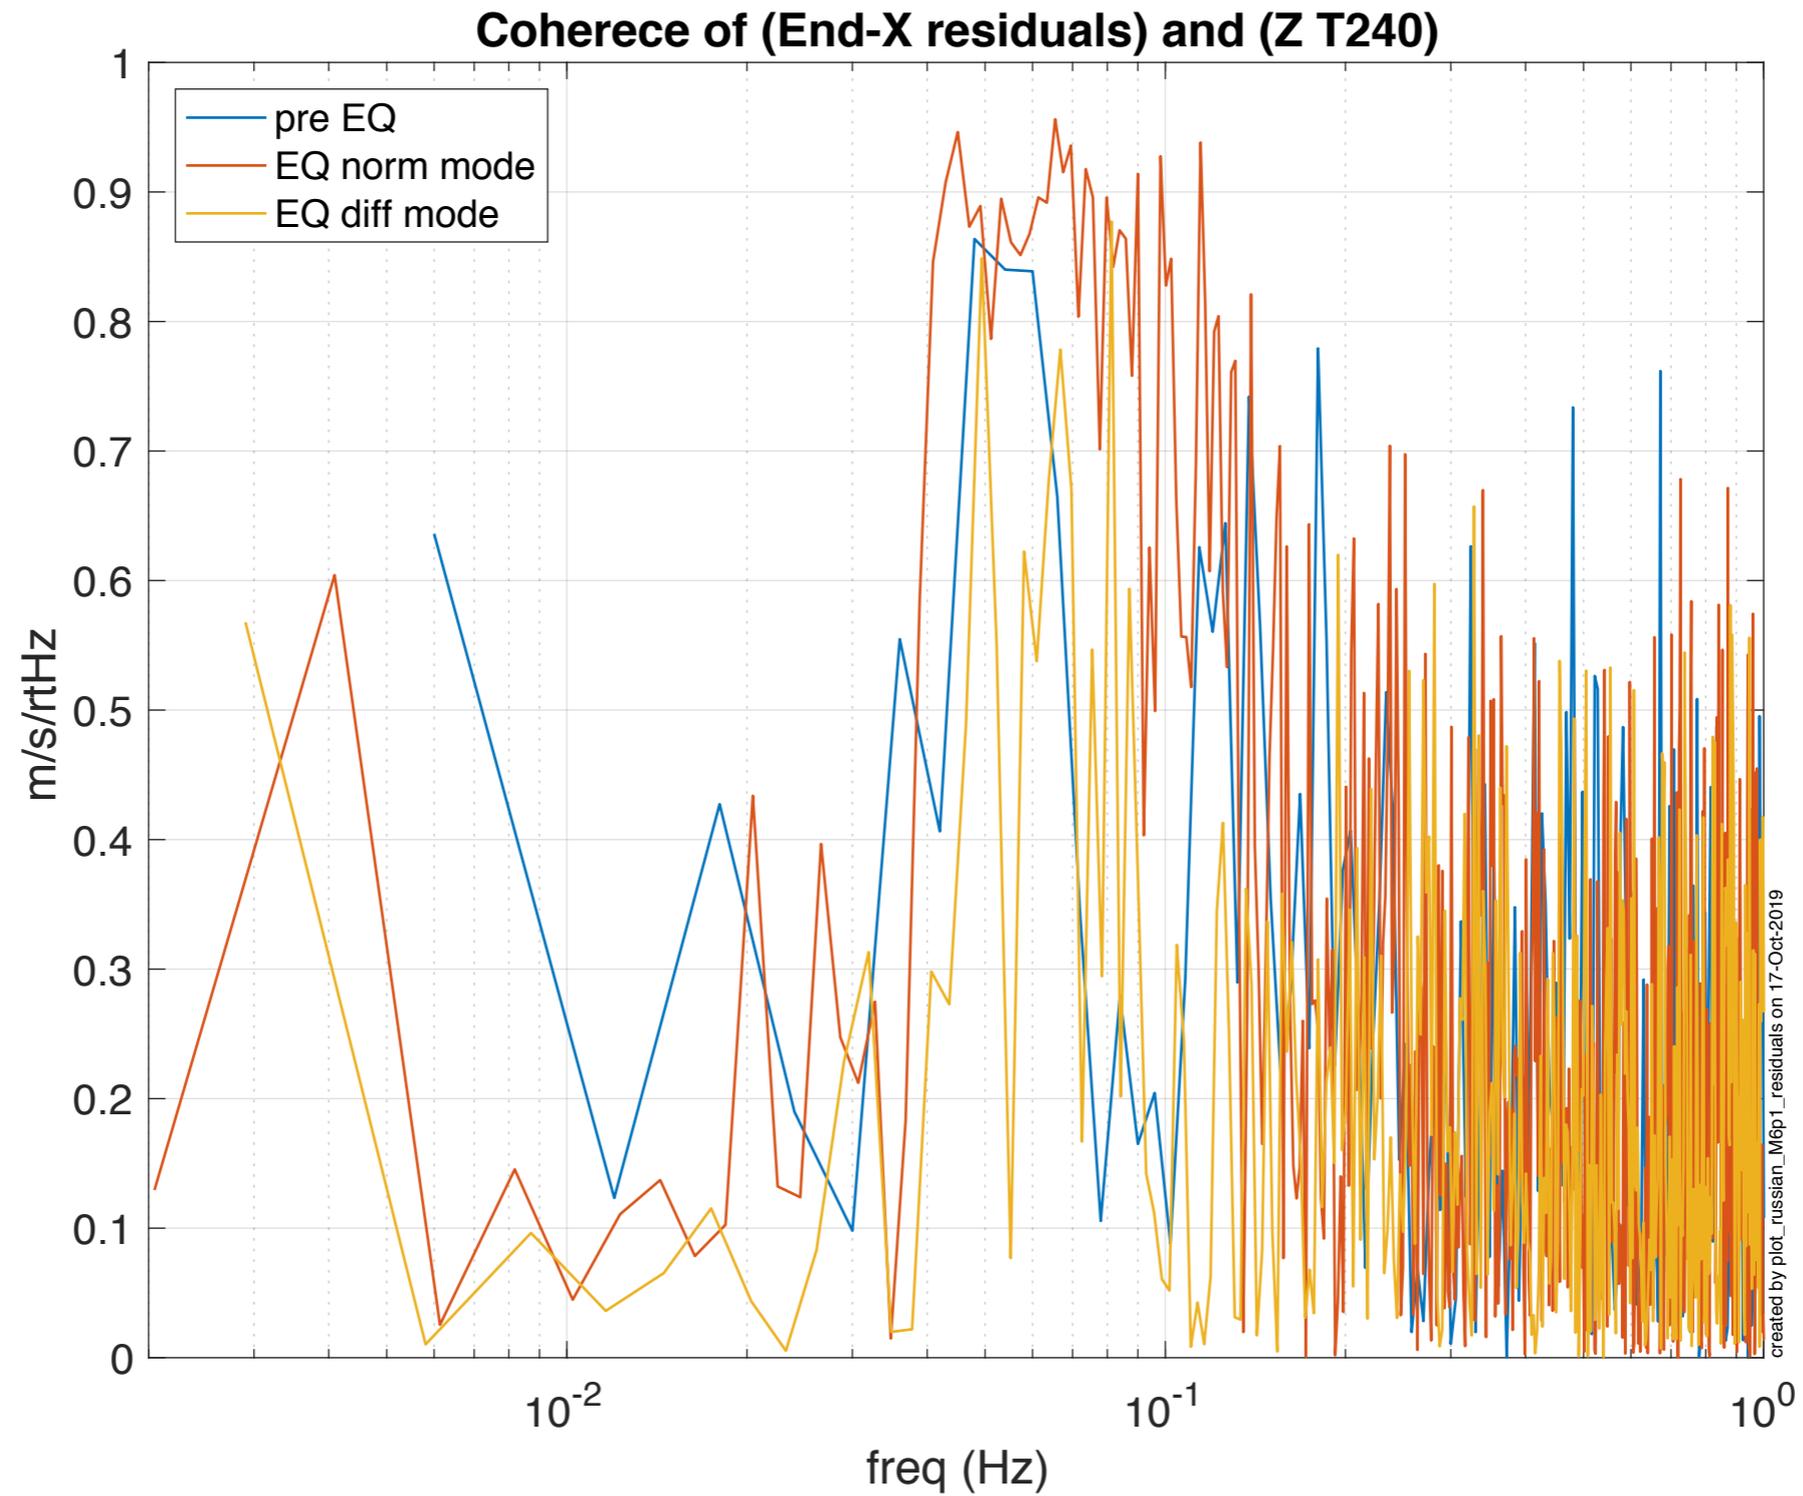

why do T240 & CPS residuals match?

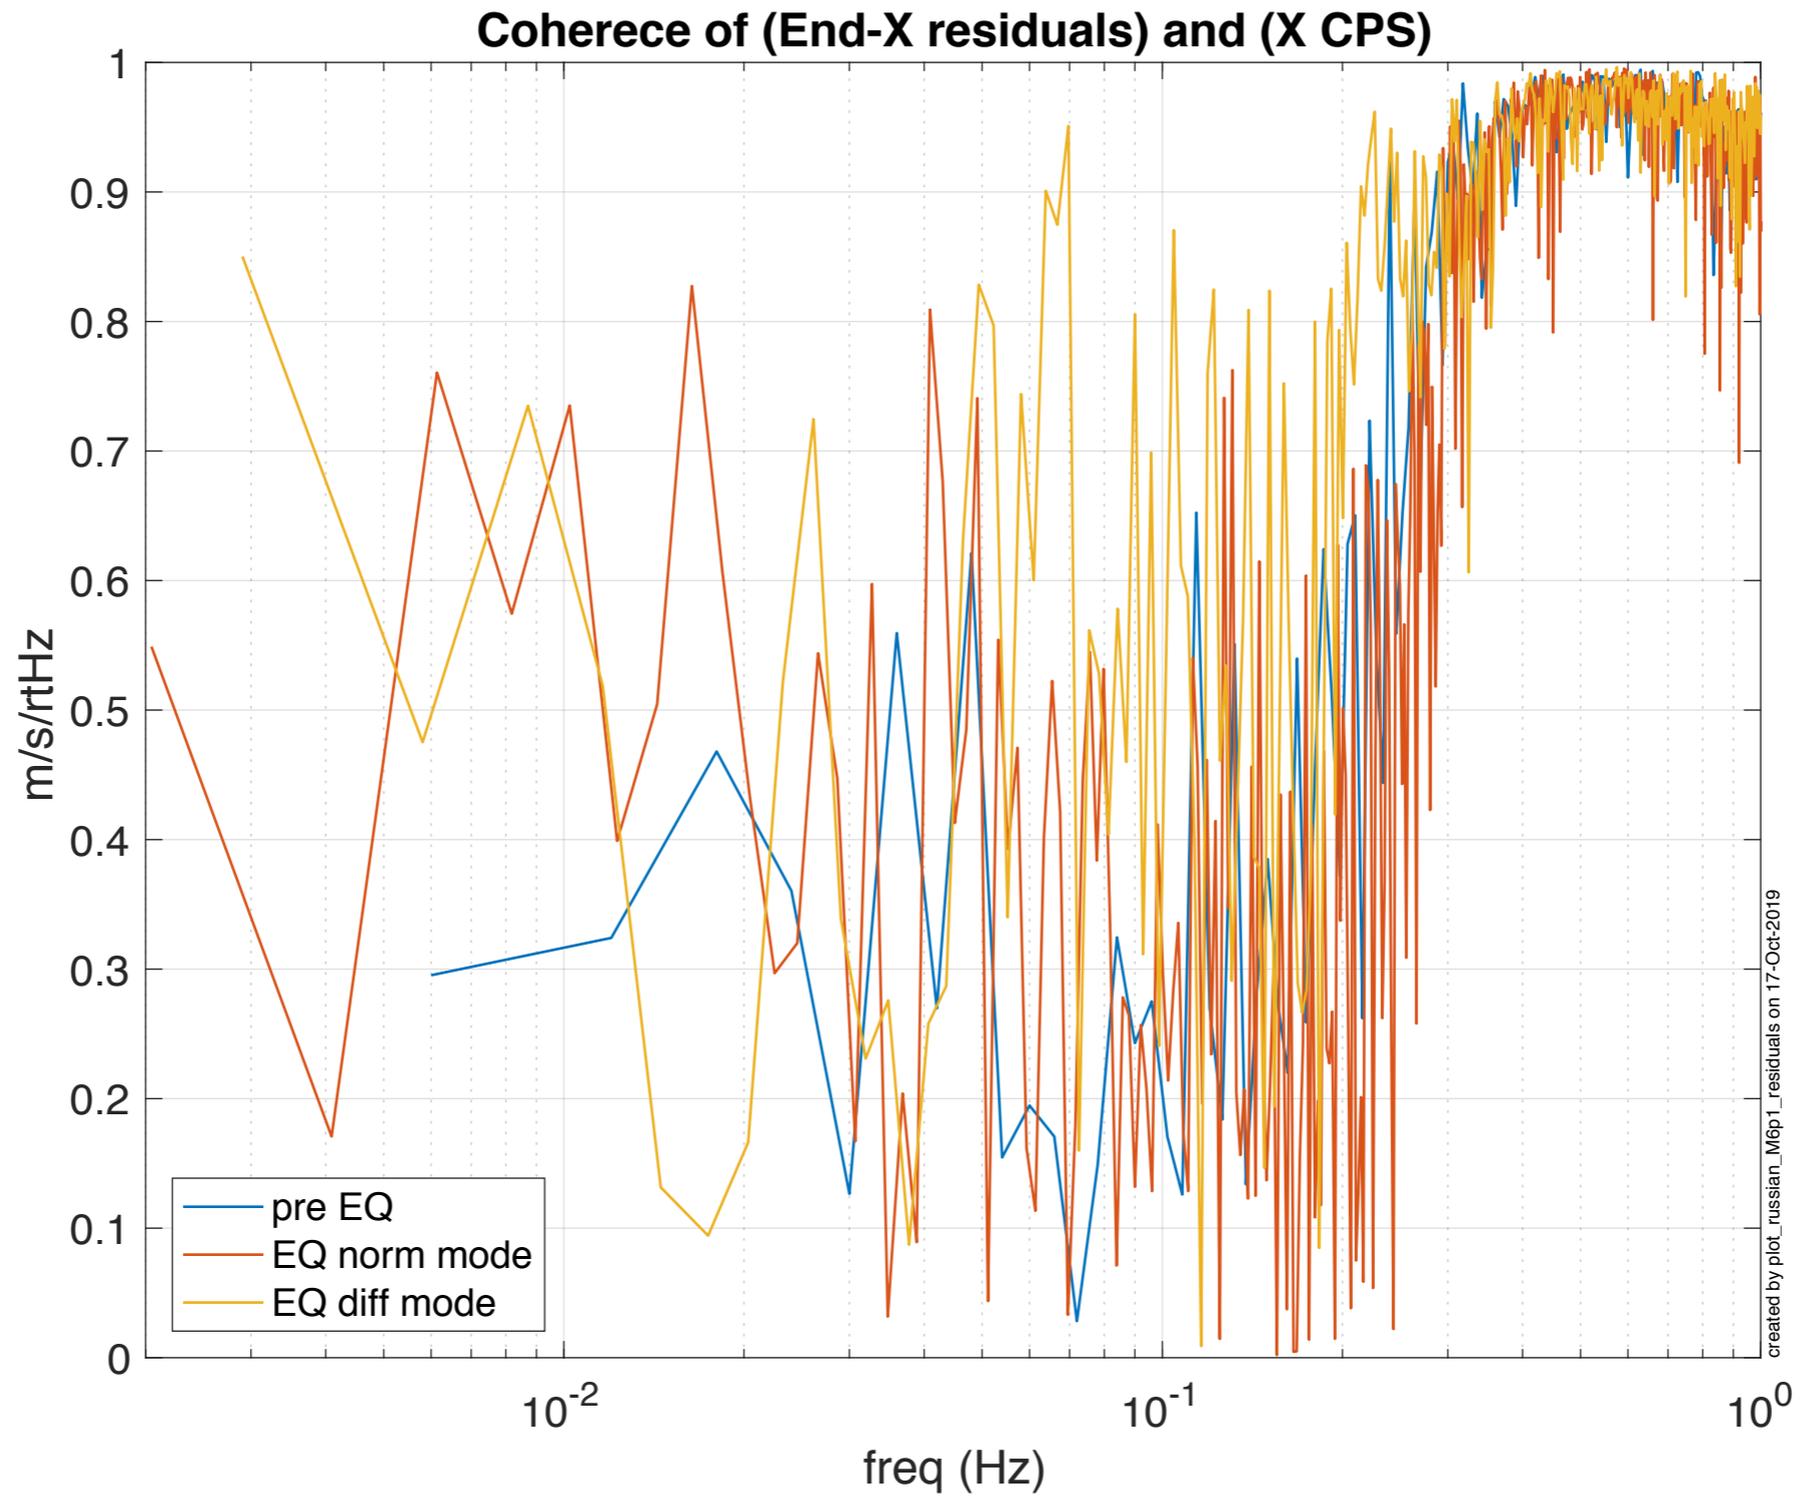

True at End-X as well

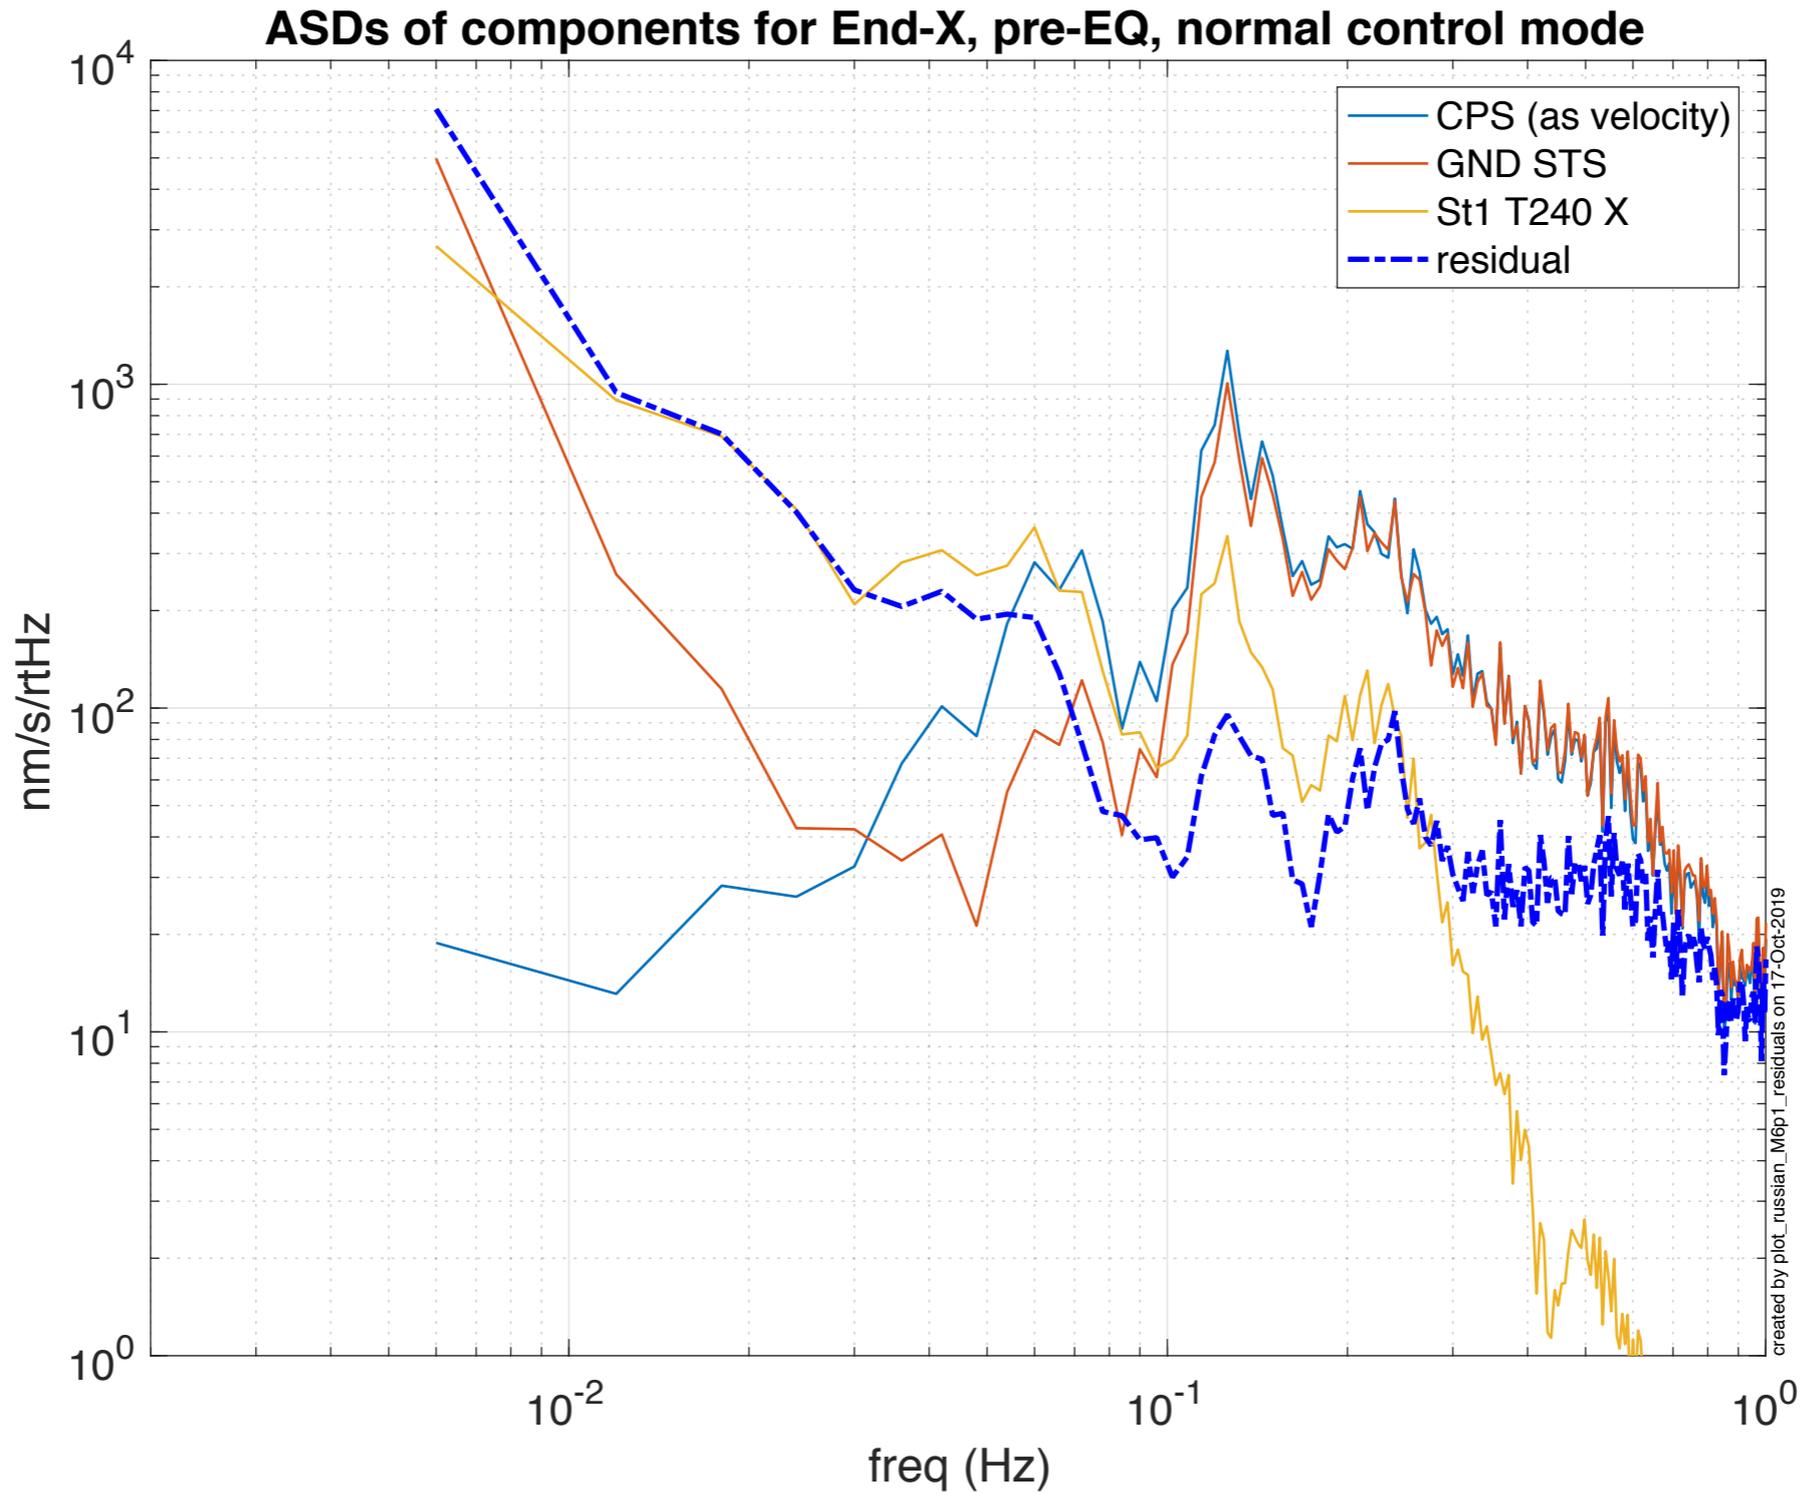

True at End-X as well

True at End-X as well

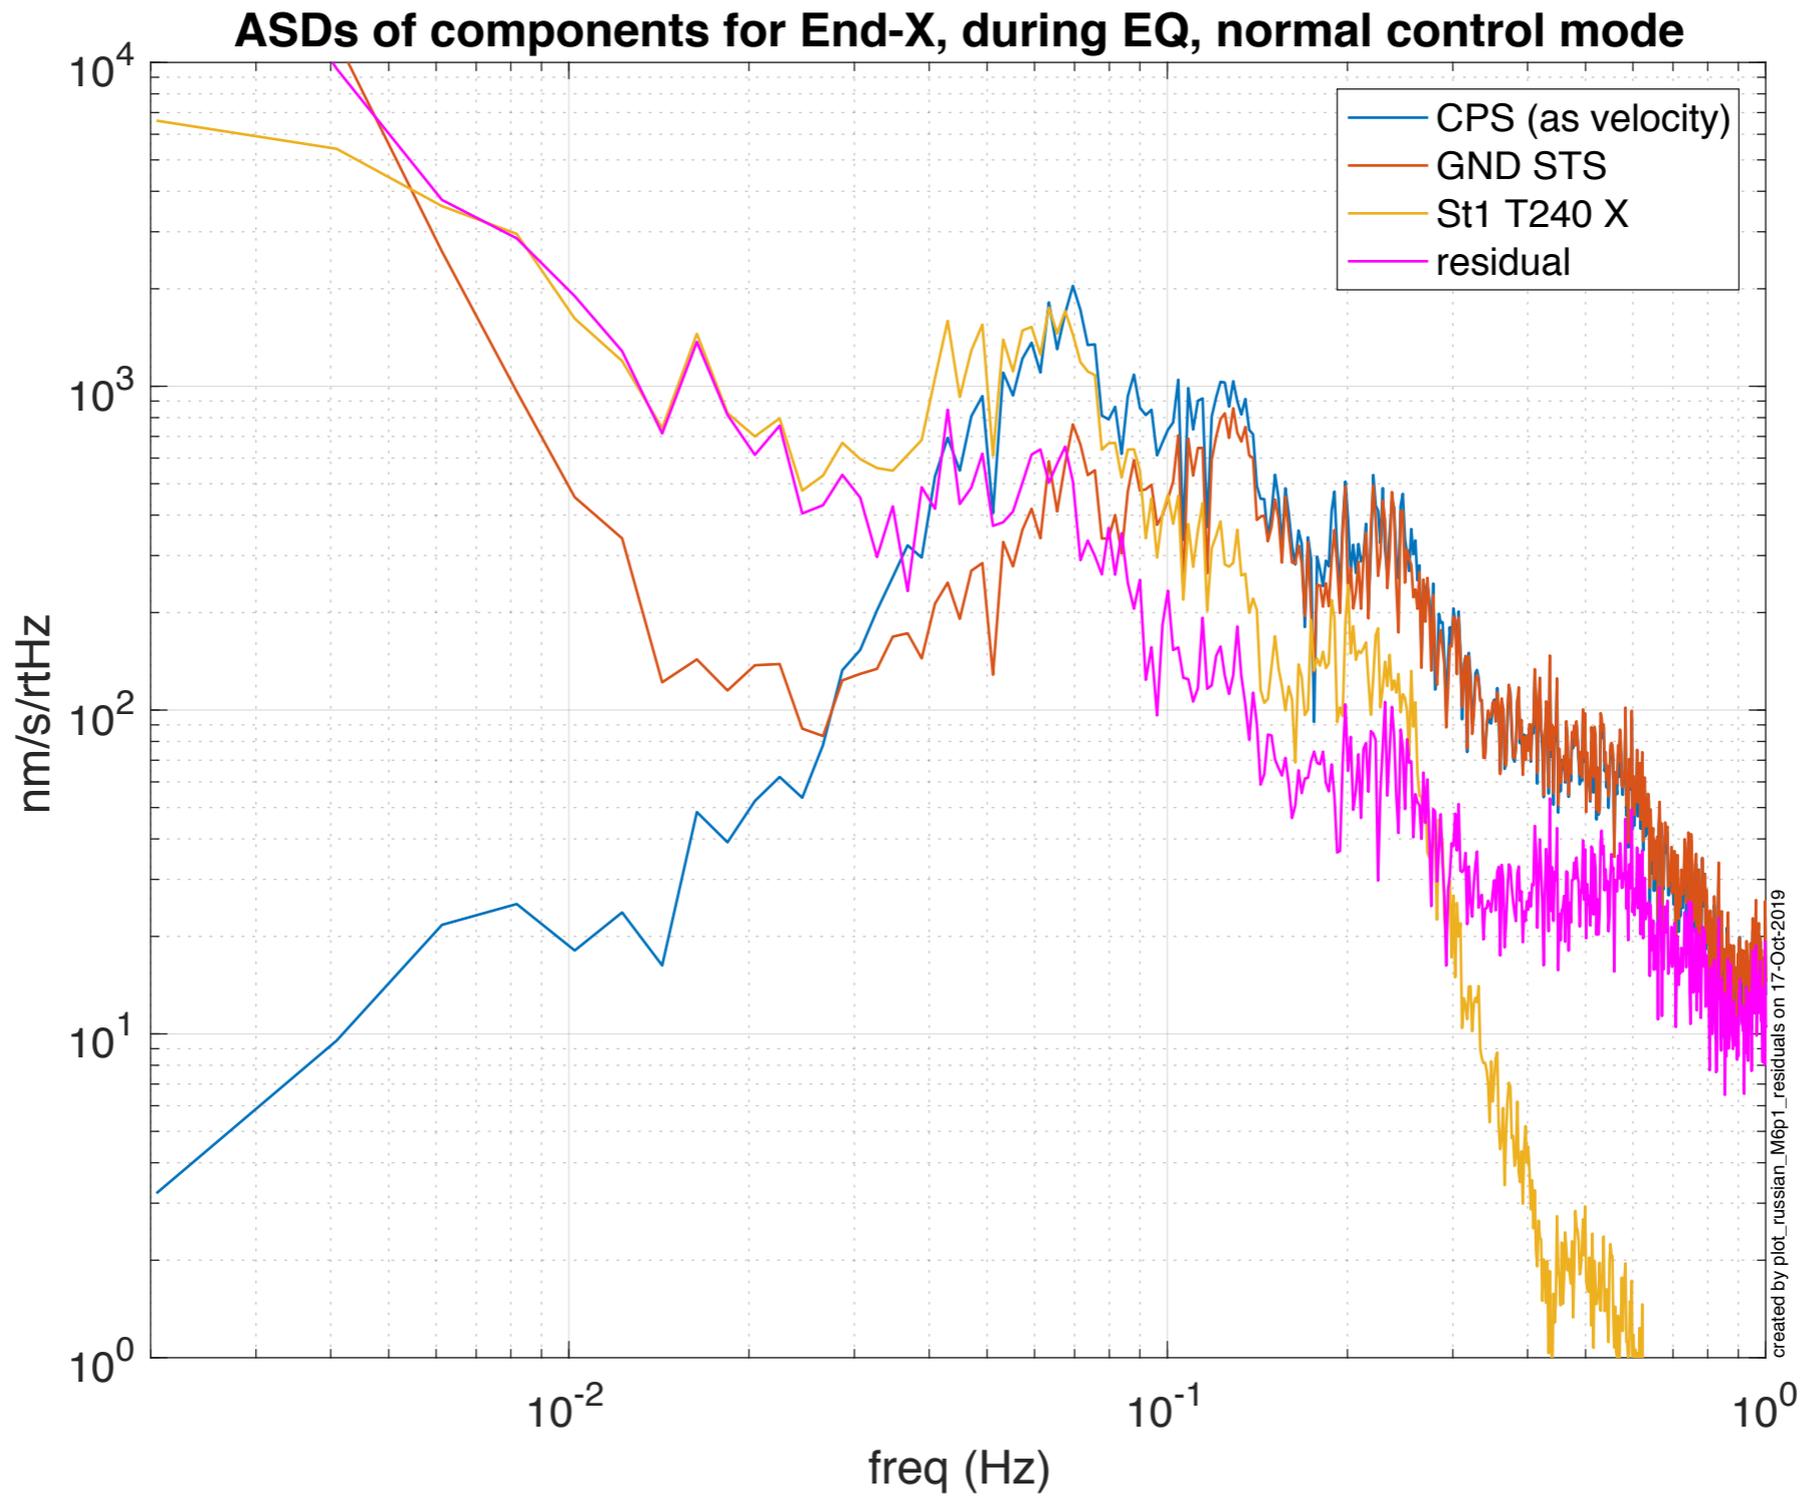

Plot residuals (End-X)

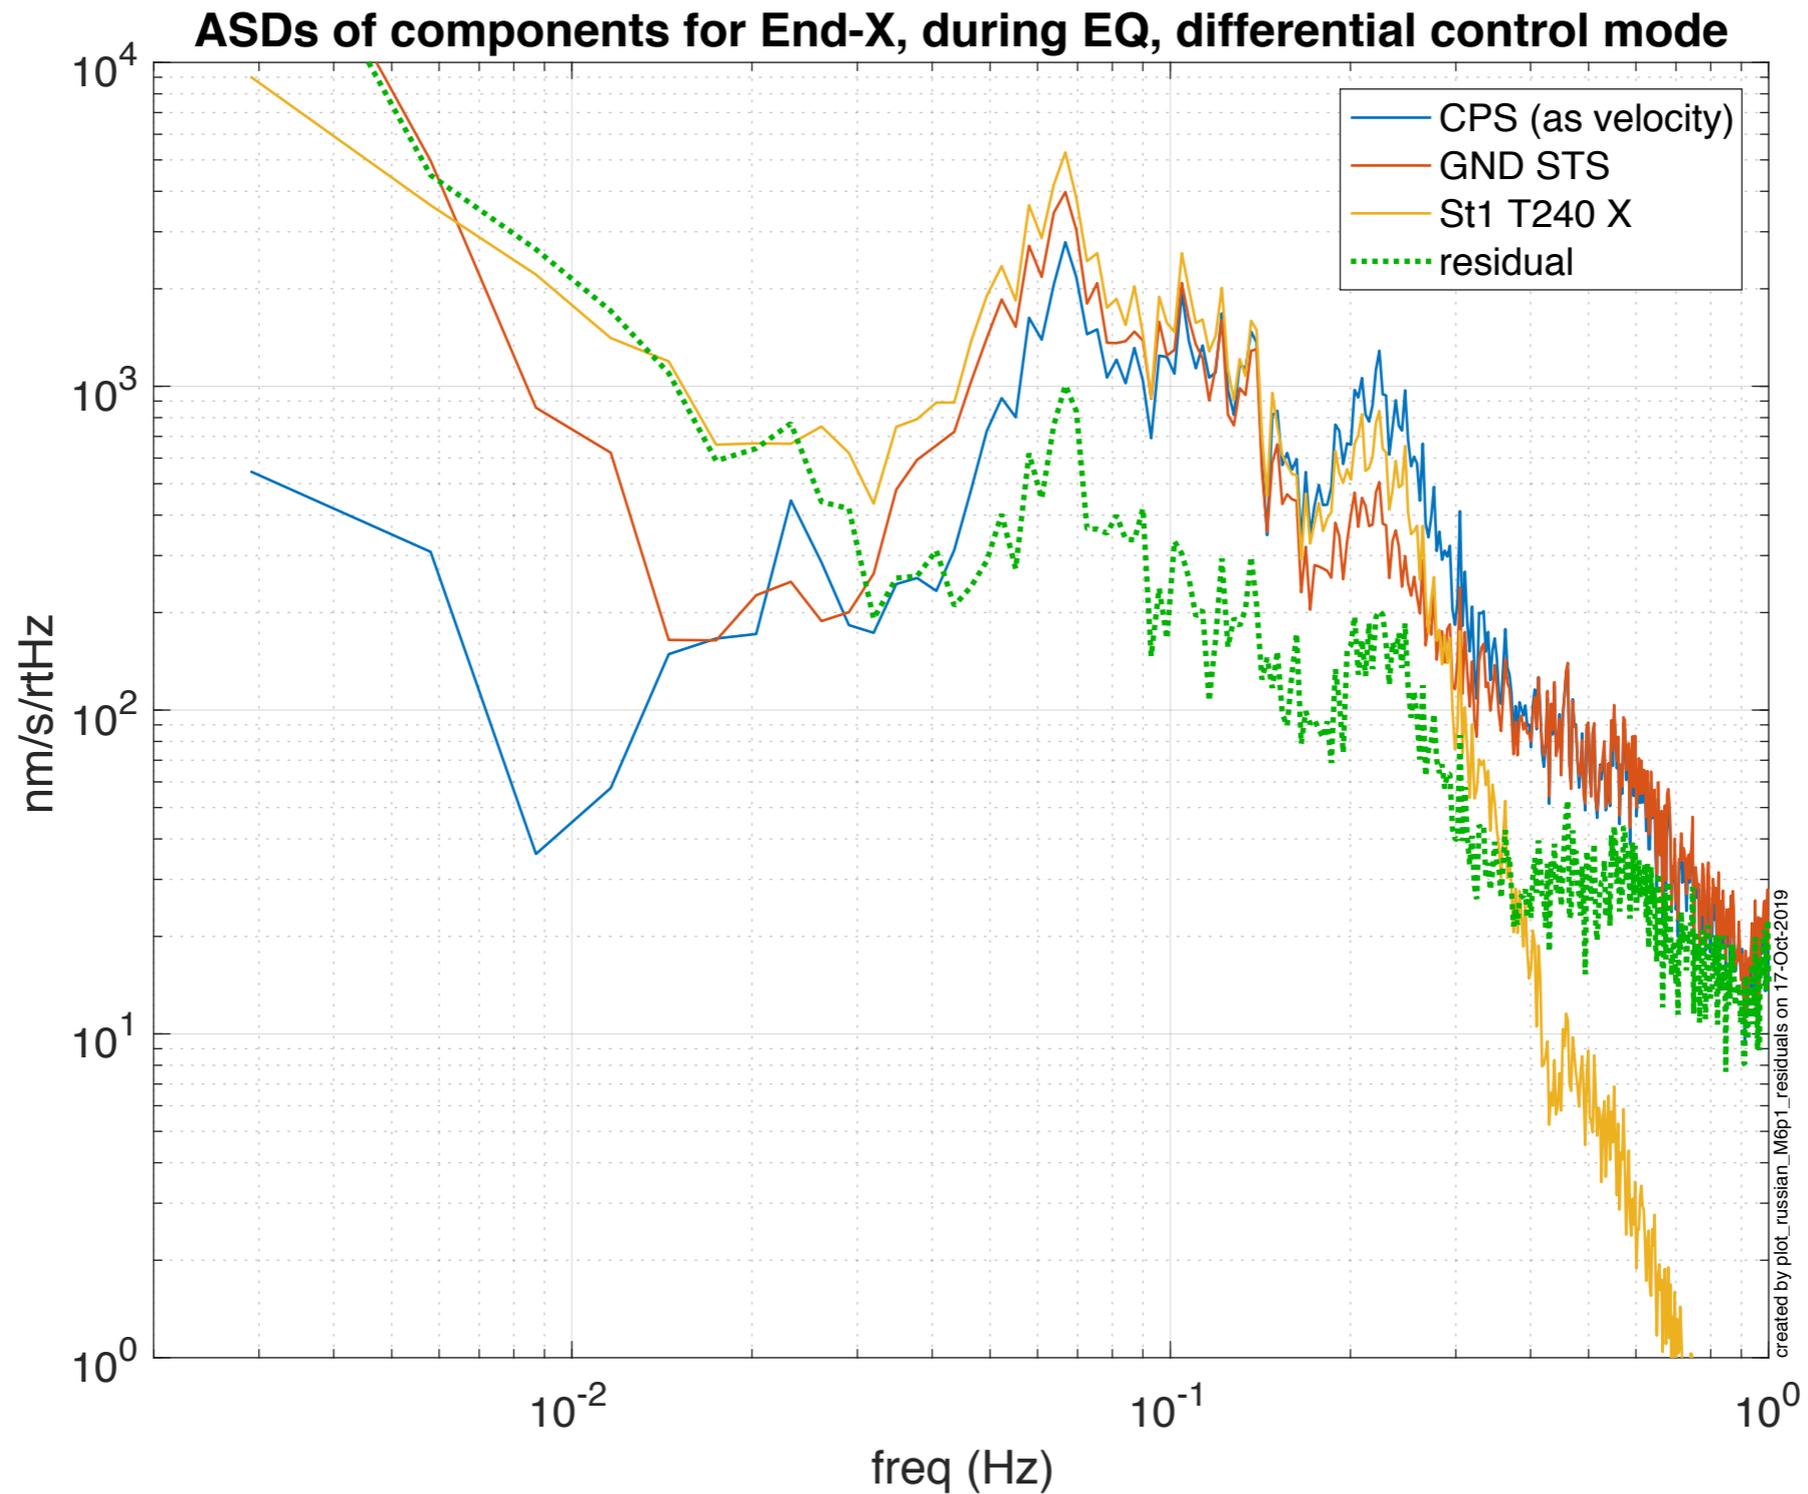

I don't see a clear pattern in these, maybe you can?

Plot residuals (End-X)

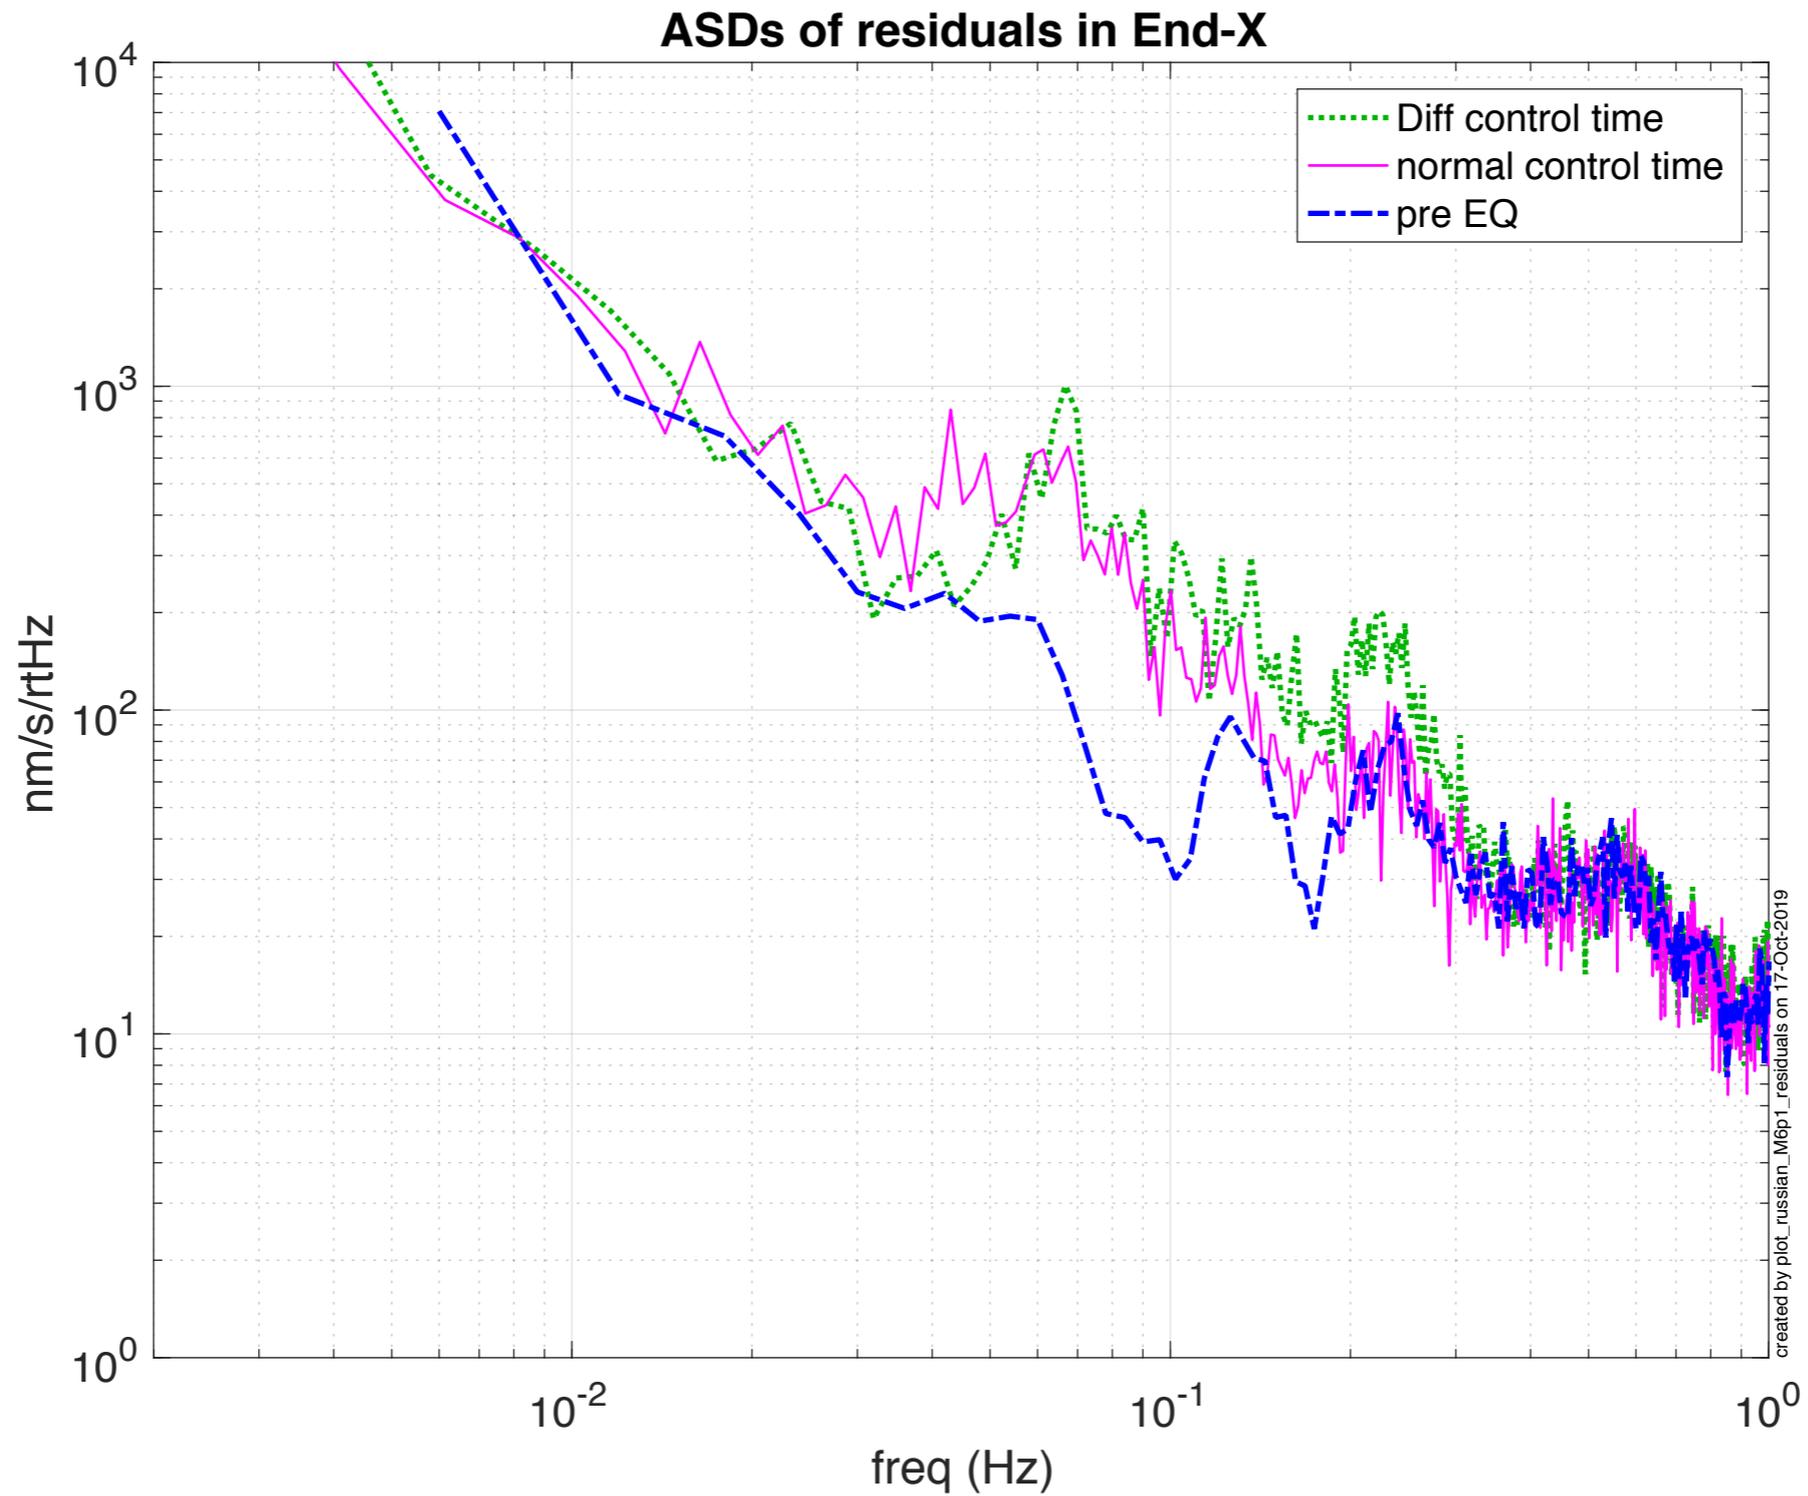

I don't see a clear pattern in these, maybe you can?

Plot residuals (End-X)

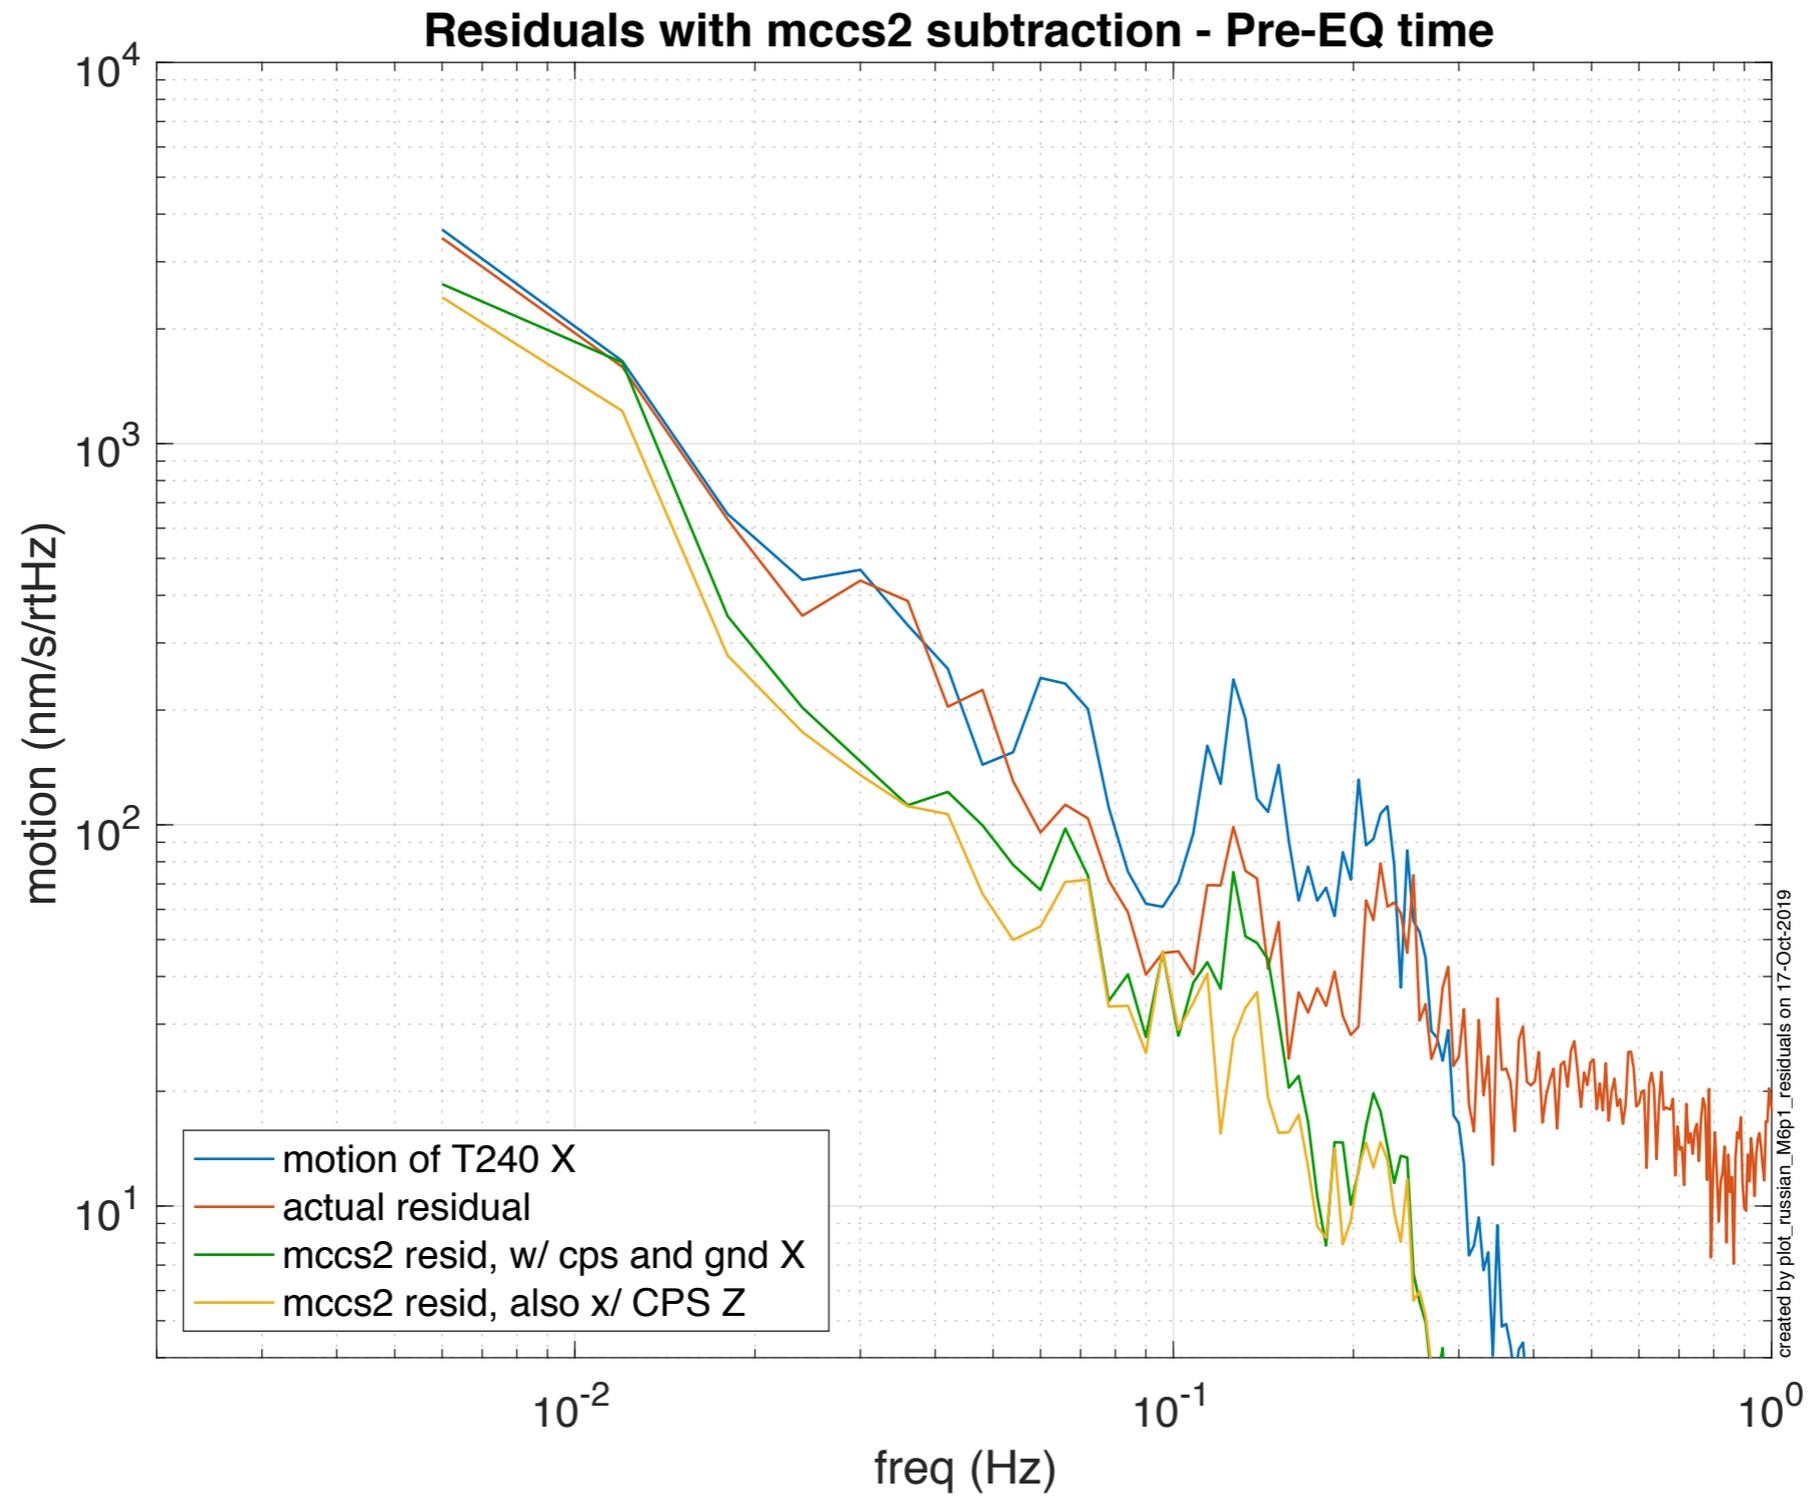

I don't see a clear pattern in these, maybe you can?

compare residuals (End-X)

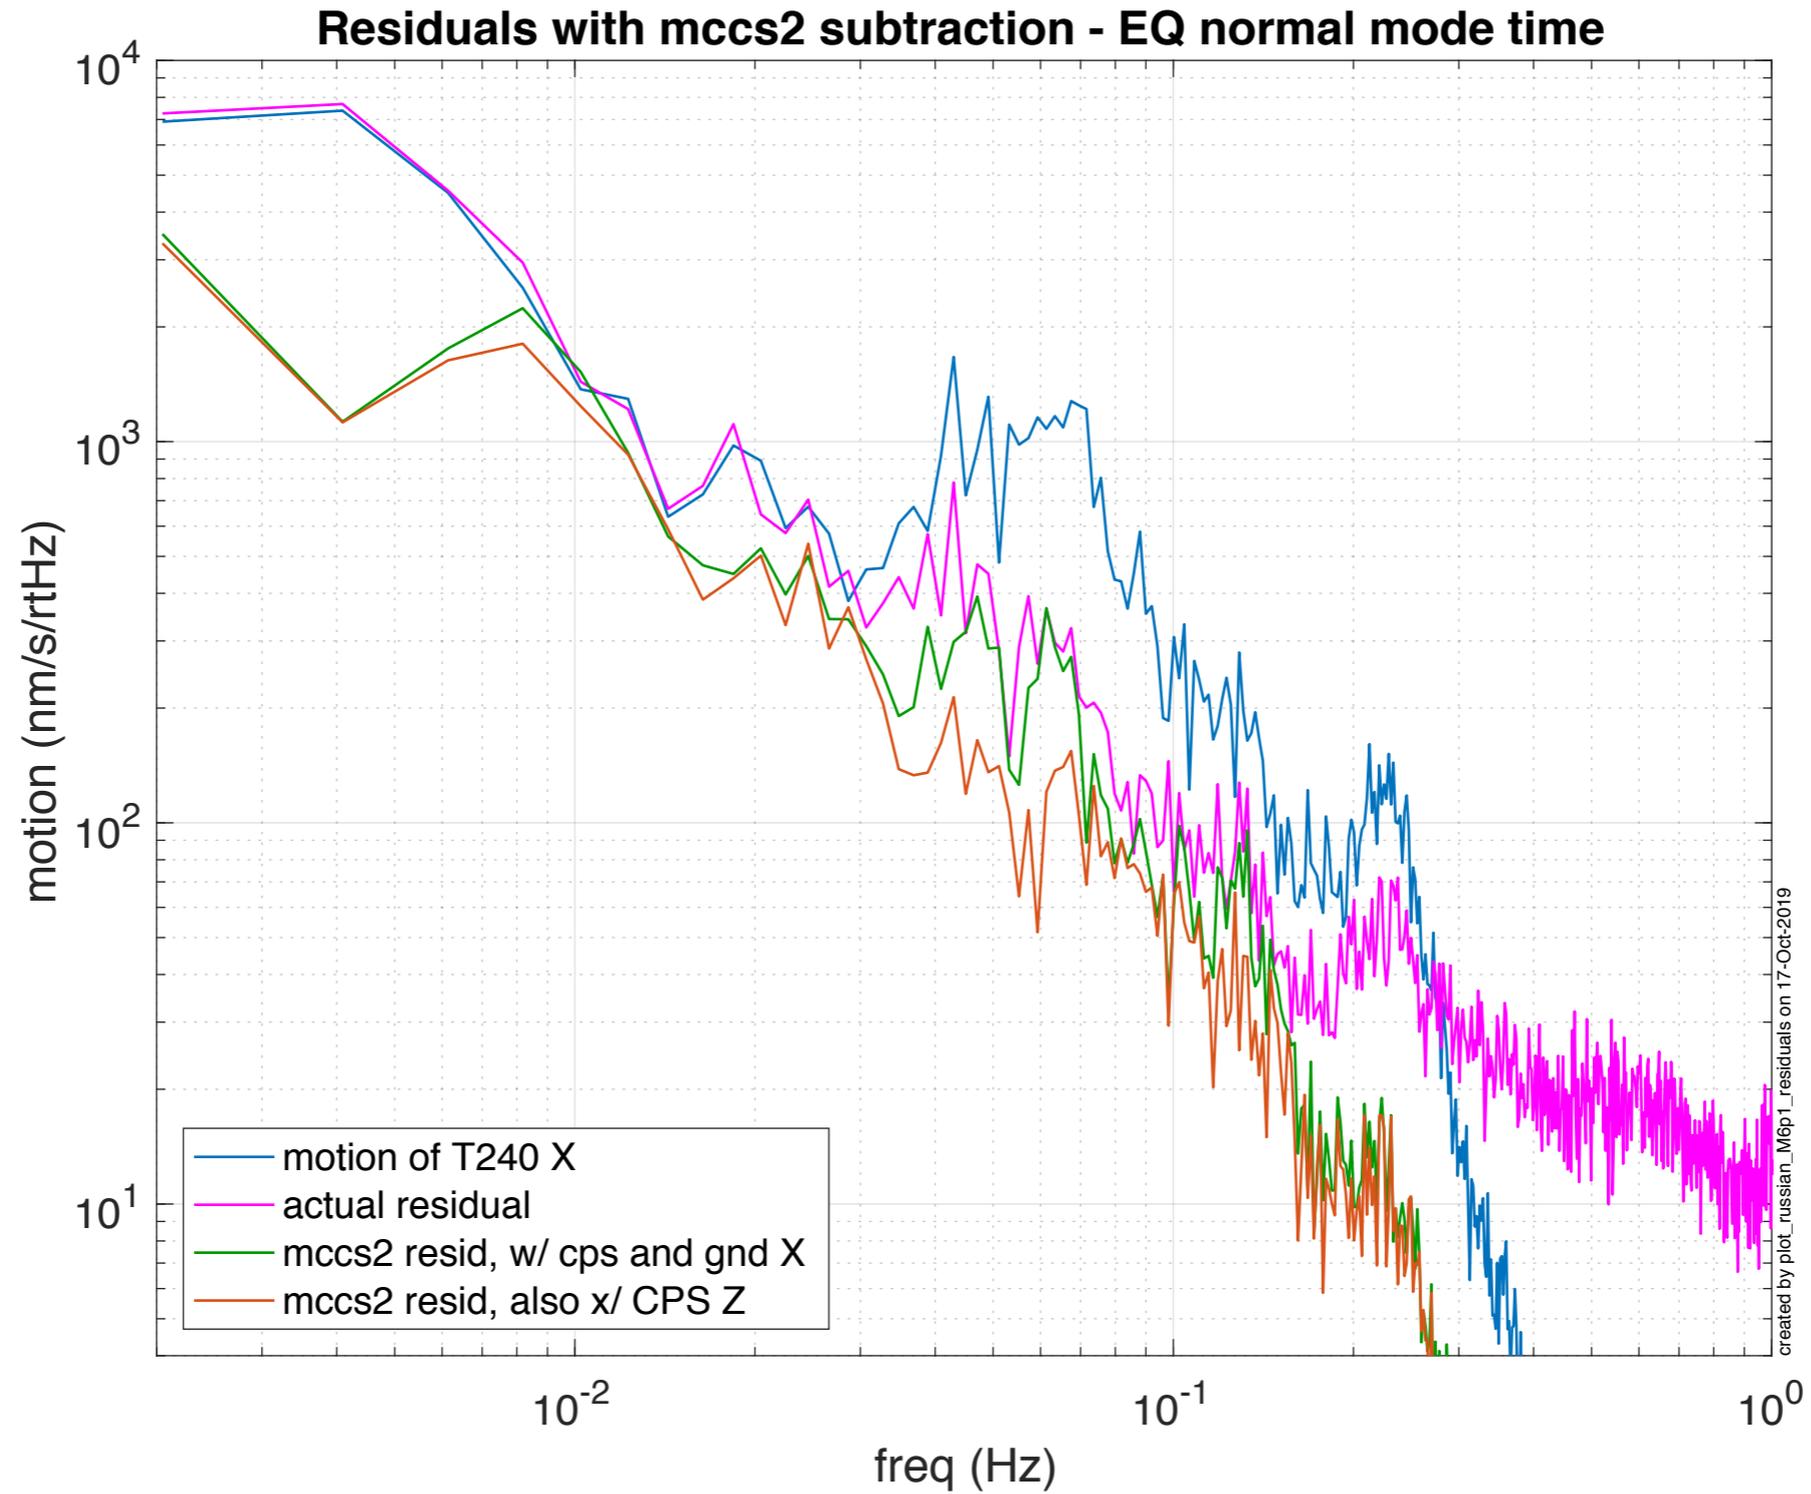

I don't see a clear pattern in these, maybe you can?

compare coh and mccs2 (ln-X)

compare coh and mccs2 (ln-X)

compare coh and mccs2 (In-X)
