

RF modules need to be mounted on mounting plate.
VCO box is 1600_20 variant.

Cable V4 is 34-pin twisted-pair flat-ribbon.

Cables for V2 and V3 are twisted pair and soldered to the amplifiers.
Solder a 10nF capacitor across each power terminal.

Use multi-color hook-up wire for V5.

For PLL variants connect SMA tee to tune input of VCO oscillator
and connect the SMA cable to PLL SMA connector.

FDD variants use a by-10 divider rather than by-16.

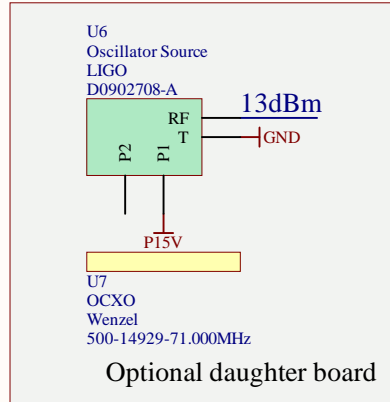

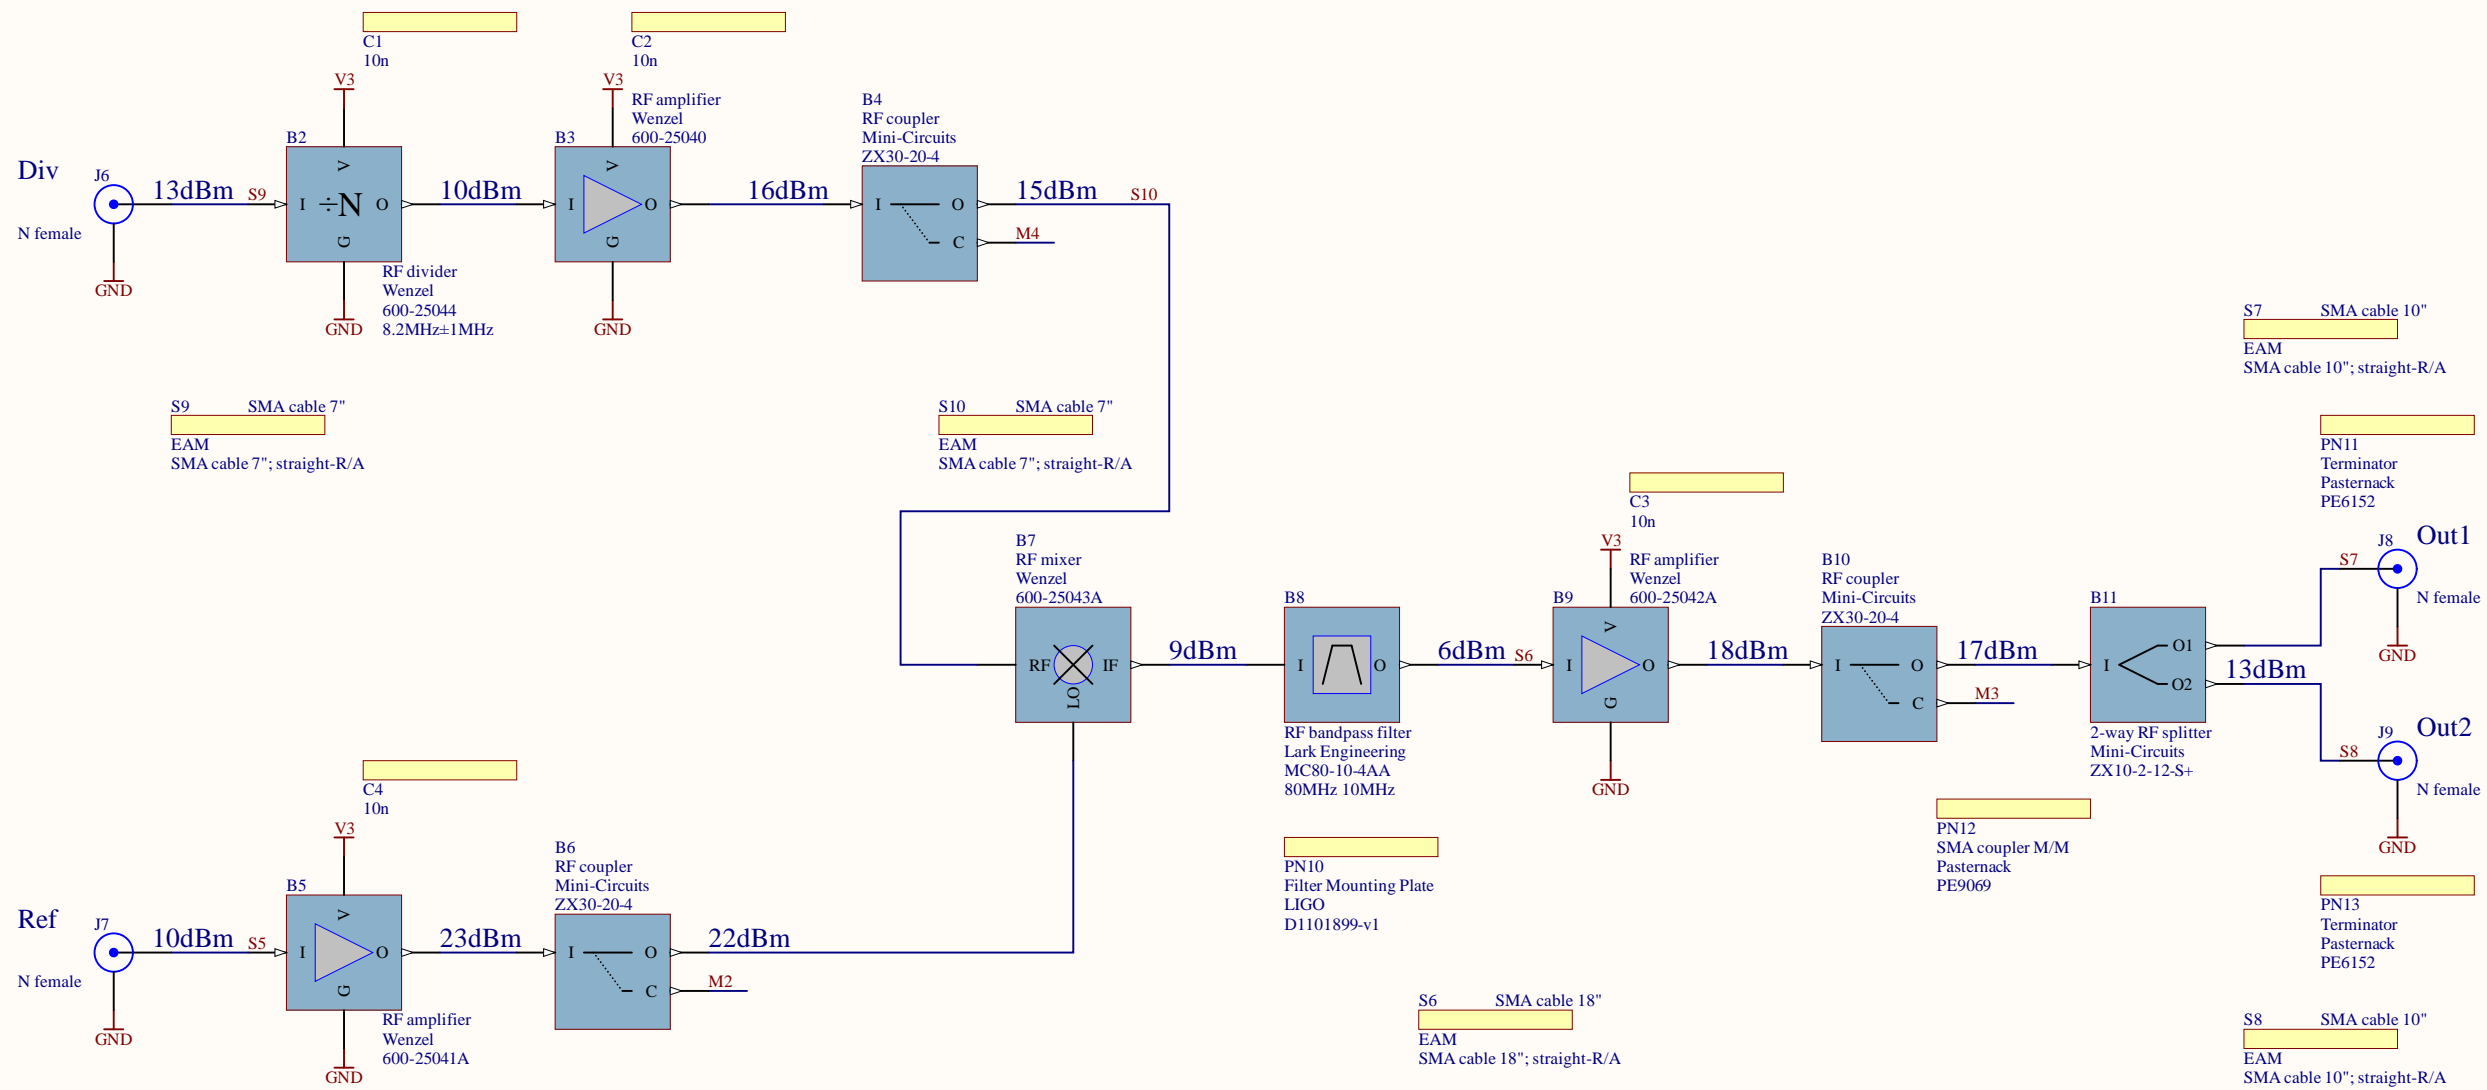

For PLL variants use hook-up wire to connect V15, VCC and OK.
Solder the OK wire to the bottom side of TP14 on the power board.
Use rear panel D1300808-v1 instead of D090607-B.
